Press Release 10/05/2015

**SPILL GATE MONITORING:** As of this morning, the lake level had risen approximately 3 feet in 48 hours, but was holding. Spillway gates will continue to operate as we work to balance inflow from Lake Greenwood and other tributaries. We have been notified that inflow from Lake Greenwood has been reduced today, and we should see a positive impact from this on our system later this afternoon. We'll continue to monitor levels and manage outflows.
