

County's Wood Grinding & Compost Facility

In 2010, SWM began diverting clean wood waste from the landfill and processing it at the Edmund Wood Grinding & Compost Facility. Annually, ~ 8,300 tons of clean wood waste is processed into compost and mulch from clean wood waste, greenery, grass clippings and leaves that is brought to Collection & Recycle Centers and to the Edmund Landfill.

Lex-Co Natural Compost is a high-carbon low nitrogen Certified product that is great for flower and vegetable garden beds.

Lexington County Solid Waste Management - Waste/Recycle App

The App will be free to County residents and will make it easier to remember trash and recycling pickup schedules, determine what and where materials can be recycled, will provide important curbside collection schedule changes, communicate facility closure information, and provide special recycle and event updates. The new App is initially funded by DHEC and will be accessible with cell phones, ipads, tablets, and computers.

If anyone is interested in assisting with the testing process, email or call (rvandergeest@lex-co.com (785-3340)).
