

County of Lexington, South Carolina

Community Development Block Grant Mitigation

ACTION PLAN

Amendment #3

April 19, 2023

Prepared By:

County of Lexington, Community Development Department
with assistance from Tetra Tech, Inc.

Ledger of Action Plan Amendments

Action Plan Version	HUD Approval Date	Status
Initial Action Plan	October 8, 2020	Approved by HUD
Amendment 1	January 13, 2021	Approved by HUD
Amendment 2	December 22, 2022	Approved by HUD
Amendment 3	TBD	

**LEXINGTON COUNTY
COMMUNITY DEVELOPMENT BLOCK GRANT
MITIGATION PROGRAM (CDBG-MIT) ACTION
PLAN AMENDMENT #3**

Substantial

HUD Submission Date: TBD

Provided here is a summary of the changes to Lexington County's CDBG-MIT Action Plan. The changes provided in this amendment relate to the transfer of \$740,000 from the Hazard Mitigation Housing Buyout Program to the Disaster Mitigation Program Planning project and additional description of Planning activities. Additional changes involve the removal of the Crout Pond Way/Nathan Miller Road activity from the South Central Lexington County Road Improvements project and redistribution of those funds among remaining infrastructure projects.

Lexington County made the amended Action Plan available for public review and comment for 30 days.

Substantial Amendment #3 Summary Revisions

Page Number	Section	Revision
56-57	3.3	Update funding transfer from Buyout Program to Planning.
58	3.4	Added language explaining that County will repair any impacts to infrastructure sustained during Buyout Program demolition and site clearance.
63-65	3.5	Explained removal of Crout Pond Way/Nathan Miller Road activity from the South Central Lexington County Road Improvements project and redistribution of its funds among infrastructure projects.. Updated budget.
66-67	3.5	Updated budget for Culler Road Improvements project.
68-69	3.5	Updated budget for Charles Town Road Improvements project.
82	7.7	Update table.

**LEXINGTON COUNTY
COMMUNITY DEVELOPMENT BLOCK GRANT
MITIGATION PROGRAM (CDBG-MIT) ACTION
PLAN AMENDMENT #2**

Substantial

HUD Submission Date: TBD

Provided here is a summary of the changes to Lexington County's CDBG-MIT Action Plan. The changes provided in this amendment relate to the transfer of \$740,000 from the Hazard Mitigation Housing Buyout Program to the Disaster Mitigation Program Planning project and additional description of Planning activities. Additional changes involve the inclusion of minor clarifying language regarding the County's Voluntary Housing Buyout Program incentives. Updates also include revising terminology and updating budget tables as necessary.

Lexington County made the amended Action Plan available for public review and comment for 30 days.

Substantial Amendment #2 Summary Revisions

Page Number	Section	Revision
Pg. 1	1	Revision of HMP development language.
Pg. 13	2.2	Update Table 2-2.
Pg. 55	3.2	Removal of HMP project reference.
Pg. 56-57	3.2	Revise Disaster Mitigation Program Planning project.
Pg. 59	3.3	Clarified language regarding Buyout Program.
Pg. 60	3.3	Update to Table 3-1.
Pg. 71	4.4	Notation regarding public comment period and comments received.
Pg. 81	7.7	Update Table 7-1.
Misc.	Misc.	Update the term CDBG-MIT Administrator to CDBG-MIT Grant Manager.
Pg. 79	7.5	Updated internal auditor language.

**LEXINGTON COUNTY
COMMUNITY DEVELOPMENT BLOCK GRANT
MITIGATION PROGRAM (CDBG-MIT) ACTION
PLAN AMENDMENT #1**

Substantial

HUD Submission Date: December 2, 2020

Provided here is a summary of the changes to Lexington County's CDBG-MIT Action Plan. The first set of changes provided in this amendment relate to the inclusion of incentives to the Buyout Program and clarification on appraisal values.

Lexington County made the amended Action Plan available for public review and comment for 30 days. The County did not receive any comments from the public.

Substantial Amendment #1 Summary Revisions

Page Number	Section	Revision
Pg. 58	3.3	Included language regarding Buyout Program incentives and revision regarding appraisals.
Pg. 59	3.3	Added Table 3-1 providing incentive summary.
Pg. 70	4.4	Added language regarding public comments period for Amendment #1.

1. Executive Summary

Lexington County continues to recover from disaster impacts from storm and flooding event which took place in October 2015. To assist in the recovery from this disaster the County received two allocations of Community Development Block Grant–Disaster Recovery (CDBG-DR) funds under the Disaster Relief Appropriations Act of 2016. These funds totaled more than \$20 million in recovery assistance. In order to help reduce the repetitive cycle of disaster impacts and loss the Additional Supplemental Appropriations for Disaster Relief Requirements Act, 2018 (Pub. L. 115–123, approved February 9, 2018) directed the U.S. Department of Housing and Urban Development (HUD) to allocate no less than \$12 billion for mitigation activities for States and local grantees who had received CDBG-DR funds for disasters occurring in 2015, 2016 and 2017. These funds, allocated as Community Development Block Grant-Mitigation funds (CDBGMIT), were allocated to assist the County mitigate against future disaster risks while providing an opportunity to improve planning within the County. Lexington County was allocated \$15,185,000 in CDBG-MIT funds under Federal Register Notice, 84 FR 45838, August 30, 2019 (Notice). Funds provided under this allocation must address mitigation activities which are defined as:

. . . those activities that increase resilience to disasters and reduce or eliminate the longterm risk of loss of life, injury, damage to and loss of property, and suffering and hardship, by lessening the impact of future disasters.

HUD’s purpose for these funds, as identified in the Notice, is to:

- Support data-informed investments in high-impact projects that will reduce risks attributable to natural disasters, with particular focus on repetitive loss of property and critical infrastructure;
- Build the County’s capacity to comprehensively analyze disaster risks through the use of data and meaningful community engagement;
- Support the adoption of policies that reflect local and regional priorities that will have long-lasting effects on community risk reduction, to include the risk reduction to community lifelines such as;
 - Safety and Security ○ Communications ○ Food & Water ○ Sheltering ○ Transportation ○ Health and Medical ○ Hazardous Material (management) ○ Energy (Power & Fuel)
 - Future disaster costs (e.g. forward-looking land use plans)
- Maximize the impact of available funds by encouraging leverage, private-public partnerships, and coordination with other Federal programs.

The Notice provided the regulations and requirements the CDBG-MIT funds are subject to and described the responsibilities and processes the County must undertake in the utilization of these funds. This includes the development and provision of an Action Plan as defined under section V.a.2 of the Notice and is presented here. The Action Plan consists of the Hazard Mitigation Needs Assessment, Allocation of Funds, Citizen Participation Efforts, Planning and Coordination, Mitigation Commitments, and Monitoring Standards & Reporting Requirements. The Hazard Mitigation Needs Assessment includes the review of the County’s Hazard Mitigation Plan, “An All Natural Hazard Risk Assessment and Hazard Mitigation Plan for Central Midlands Region of South Carolina, 2016” and critical analysis of the County’s potential hazards

in relation to Community Lifelines. This assessment is critical in assisting and guiding the process for project identification and funding justification for CDBG-MIT funds. The subsequent portion of the Plan contains the Allocation of Funds portion which summarizes findings and goals of the HMP and describes project identification, consideration, eligibility review and funding allocation and justification. The remaining four portions, Citizen Participation Efforts, Planning and Coordination, Mitigation Commitments, and Monitoring Standards & Reporting Requirements describe the processes and activities ensuring regulatory compliance with funding requirements.

The Action Plan requires that the County hold two public hearings, one of which must occur prior to the publication of the draft Action Plan. The County's first public hearing was advertised on June 4, 2020 and held on June 10, 2020. Due to COVID-19 public gathering limitations and restrictions, this public hearing was held online as a HUD approved virtual public hearing. The purpose of this meeting was to inform the public of the allocation of CDBG-MIT funds to the County and to inform them of the development and purpose of the Action Plan. The draft action plan was then posted on the County's CDBG Mitigation website on June 12, 2020 for public review and comments. The public was notified of a 45-day comment period following the post of the draft Action Plan in order to provide comments and feedback. The document was made available for review on the County of Lexington Disaster Mitigation webpage and in hard copy form at the County Community Development Offices at 212 S. Lake Drive, Lexington SC 29072. The second public hearing, which was also a virtual public hearing, was advertised on June 18, 2020 and was held on July 2, 2020. The purpose of this hearing was to notify the public on the proposed projects listed in the Action Plan. The proposed plan, along with comments received, was presented to County Council for their comment(s) and approval during a regularly scheduled County Council meeting on August 11, 2020. The summary of the public comments from both public hearings and the public comment period are included in Section 4.2 of this Action Plan.

1.1 Planning, Coordination, and Consistency

As part of the development of this Action Plan, Lexington County evaluated other County planning documents including its CDBG Consolidated Plan and its CDBG-DR Action Plan to ensure consistency and conformity across documents. Any relevant County planning documents were reviewed and considered as part of the development of this plan. The County's Comprehensive Plan is currently under development by the County Planning Commission and is unavailable for review. The County also provided necessary updates to the County Citizen Participation Plan in order to address changes specific to public participation requirements for CDBG-MIT funds, particularly as impacts from COVID-19 necessitated changes regarding public gatherings such as public hearings. This Action Plan was developed in coordination with several County departments which provided guidance and insight during its development of the plan. These departments included:

- Finance Department
- Procurement Department
- Legal Department
- Public Works
- Emergency Management
- County Administration
- County Council

- Department of Community Development

Lexington County consulted with Richland County as well as the City of Columbia during the development of the Action Plan. Richland County and the City of Columbia are both CDBG-DR and CDBG-MIT funding recipients engaged in active recovery and mitigation projects within the region which made communication with them particularly meaningful. The County has also been in communication with the Central Midlands Council of Governments which is responsible for the development of the regional and County-specific hazard mitigation plan. The County has maintained ongoing communication with FEMA through the County's Emergency Management Division as part of continuing recovery activities as well as to ensure adequate and up-to-date information pertaining to FEMA recovery and mitigation activity is it related to the Action Plan.

1.2 CDBG-MIT Program National Objectives

The primary objective of the CDBG-MIT Program is to assist persons of low- and moderate-income (LMI), thereby improving the housing, quality of life, and economic conditions of the affected Lexington County communities. HUD CDBG allocations typically must meet one of three National Objectives, however, under the CDBG-MIT allocation requirements this has effectively been reduced to two National Objectives. These two National Objectives include:

- Benefit LMI persons
- Meet an urgent need

Projects funded by CDBG-MIT can't meet the previous "aid in the prevention of elimination of slum or blight" National Objective without prior HUD approval through a waiver consideration. However, HUD has provided additional guidance regarding the utilization of the "Urgent Need" National Objective. The Notice explains that in order to qualify under the Urgent Need National Objective a project must, ". . . reference in (the) action plan the risk identified in the Mitigation Needs Assessment that is addressed by the activity. (The County) must maintain documentation of the measurable and verifiable reduction in risk that will be achieved upon completion of the activity." Additionally, CDBG-MIT funds have slightly reduced requirements regarding meeting the LMI National Objective where typically 70% of CDBG funds must meet the LMI National Objective, this requirement has been reduced to 50% for CDBG-MIT funds. HUD defines LMI as household income that is less than 80% of area median income. Therefore, 50% of the CDBG-MIT allocation must provide benefits to LMI populations. Lexington County has allocated \$8,275,750 (54.5%) of its total CDBG-MIT allocation to meet LMI benefit which exceeds the 50% LMI requirement.

1.3 CDBG-MIT Eligible Activities

All CDBG-MIT activities must be an eligible activity as defined under the Housing and Community Development Act of 1974 (HCDA). Any other activities outside of those defined as eligible activities must have been approved under a previous Federal Register waiver or must be submitted to and approved by HUD as a waiver.

1.4 Overview of Lexington County

Lexington County is located in central South Carolina. The County was founded in 1785. According to U.S. Census estimates, the County population as of July 1, 2019 was 298,750. That is a 13.8 percent increase

from the population calculated during the 2010 census.¹ According to the Census Bureau American Community Survey, the population of Lexington County is expected to increase 81.6 percent over the next 30 years. This is the highest projected percentage of growth of any of the Central Midlands Region counties.

The County occupies an area of 758 square miles, of that 699 square miles is land, and 59 miles is water. The County is bordered by Richland County to the east, Orangeburg and Calhoun Counties to the southeast, Aiken County to the southwest, Saluda County to the west, and Newberry County to the northwest.

1.4.1 Socioeconomic/Demographic Analysis

Lexington County conducted an analysis of key Census data in order to identify areas of concentration of vulnerable populations, areas of poverty and to assist in identifying concentrations of populations subject to fair housing laws. Fair housing laws were established under the Fair Housing Act (Title VIII of the Civil Rights Act of 1968) and “protects people from discrimination when they are renting or buying a home, getting a mortgage, seeking housing assistance, or engaging in other housing-related activities.” These laws help protect people from discrimination due to race, color, disability, religion, sex, familial status, or national origin. Lexington County only has one housing related project, the Housing Buyout Program, which is the continuation and extension of the CDBG-DR buyout program. Other CDBG-MIT funded projects will provide benefits to some of these populations but are not subject to fair housing laws.

Race

The County reviewed data to identify any concentrations on minority populations. The only race other than White to be identified as containing any notable population was Black or African American.

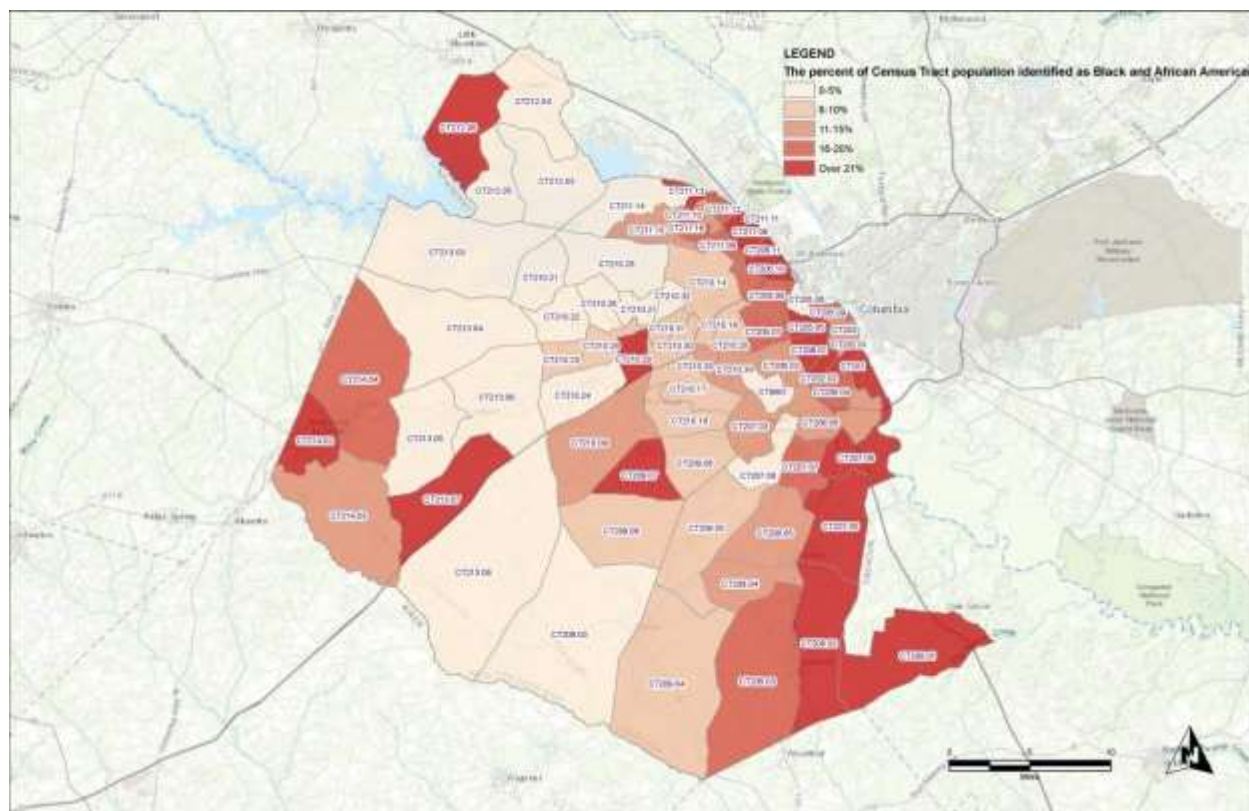

Table 1-1: Race as a Percentage of Population

Race	White Alone	Black or African American Alone	American Indian or Alaska Native Alone	Asian Alone	Native Hawaiian and other Pacific Islander Alone	Other	Two or More Races
% of County Population	79.3%	14.6%	0.3%	1.8%	0.1	1.4%	2.5%

The following map indicates the concentration of Black or African American populations by Census Tract. Projects located in Census Tracts in the southeast portion of the County, such as infrastructure improvement projects located in Census Tract 208.01, will provide benefits to Census Tract with some of the highest percentage of Black or African American populations among Census Tracts.

¹ U.S. Census QuickFacts, Lexington County, South Carolina

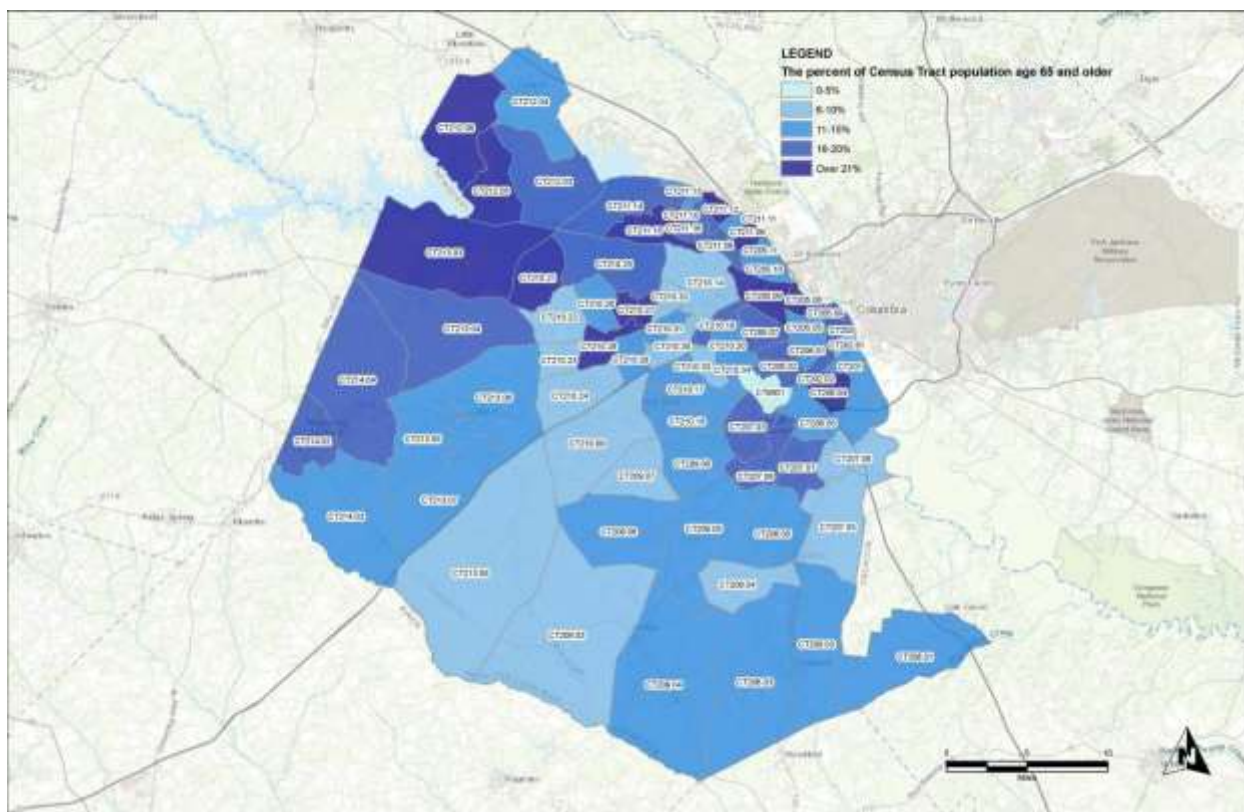

Figure 1-1: Black or African American Populations in Lexington County

Age

Approximately 15.8 percent of the population of the County is over the age of 65 which is very similar to the State's percentage of seniors at 16.2 percent. As can be seen on the following map, many of the census tracts in the northwestern portion of the County have higher concentrations of seniors in their population than many other regions of the County. Unfortunately, many of these areas contain wealthier populations making it difficult to identify and design projects which may be able to address mitigations needs while still meeting the CDBG-MIT LMI requirement. This region is also prone to much of the flooding in the County due to its proximity to Lake Murray. The neighborhoods on the eastern side of Lake Murray are the neighborhoods targeted for buyouts. The County is aware that many of the potential buyout participants may be older citizens. Buyouts of these properties will assist in possibly removing older citizens from high flood hazard areas and assist them in moving to safer portions of the County.

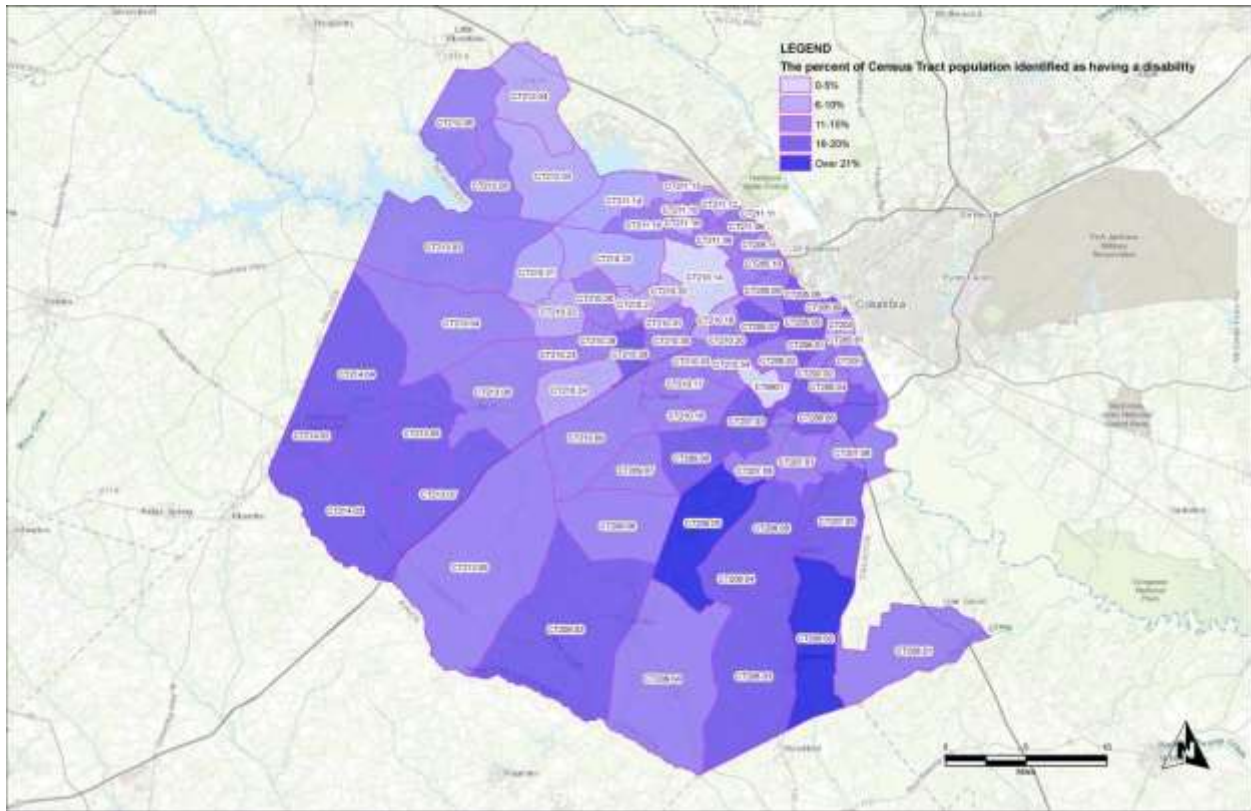

Figure 1-2: Populations Age 65 and Older in Lexington County

Disability

Approximately 13.5 percent of the County's population is identified by the Census as having a disability. Nineteen of the County's 74 Census Tracts were identified as having populations where 15 percent or more of the census tract's residents were identified as having a disability. Persons with disabilities often need additional assistance, services or have special communications needs during times of hazards. Mobility and cognitive issues can severely hamper the ability and speed at which people can react, respond and evacuate in times of disaster. Because of this, the County wanted to make sure it considered projects that specifically address mitigating impacts from disasters that were exacerbated by these issues. Infrastructure which is not only impacted by hazard events but can even further contribute to impacts and hinder mobility pose increased risk to disabled, elderly and children. They rely on vehicles, functioning roads and evacuation routes and reliable infrastructure to help ensure they can reach safety in times of need. This is why the County felt it was critical to consider a variety of projects to help serve people throughout the County with varying degrees of need as part of the hazard mitigation efforts.

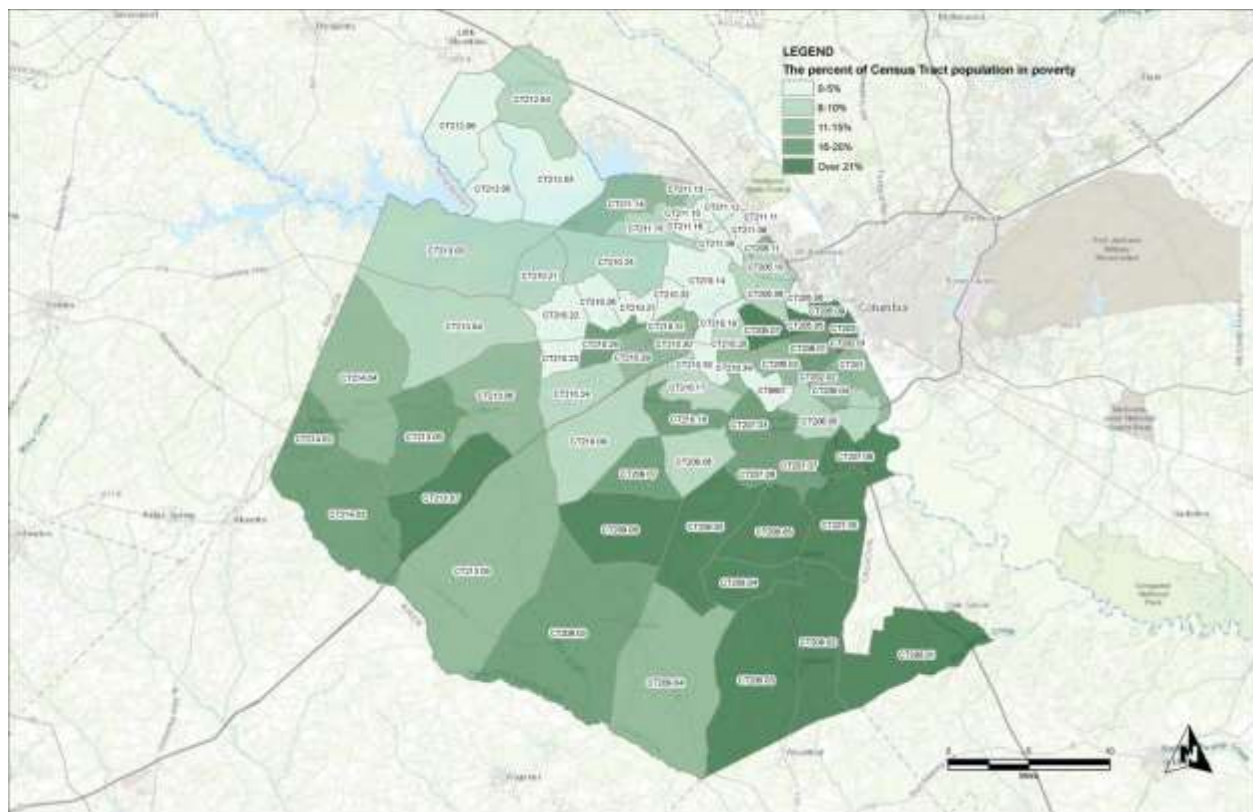

Figure 1-3: Population Identified as Having a Disability in Lexington County

Poverty

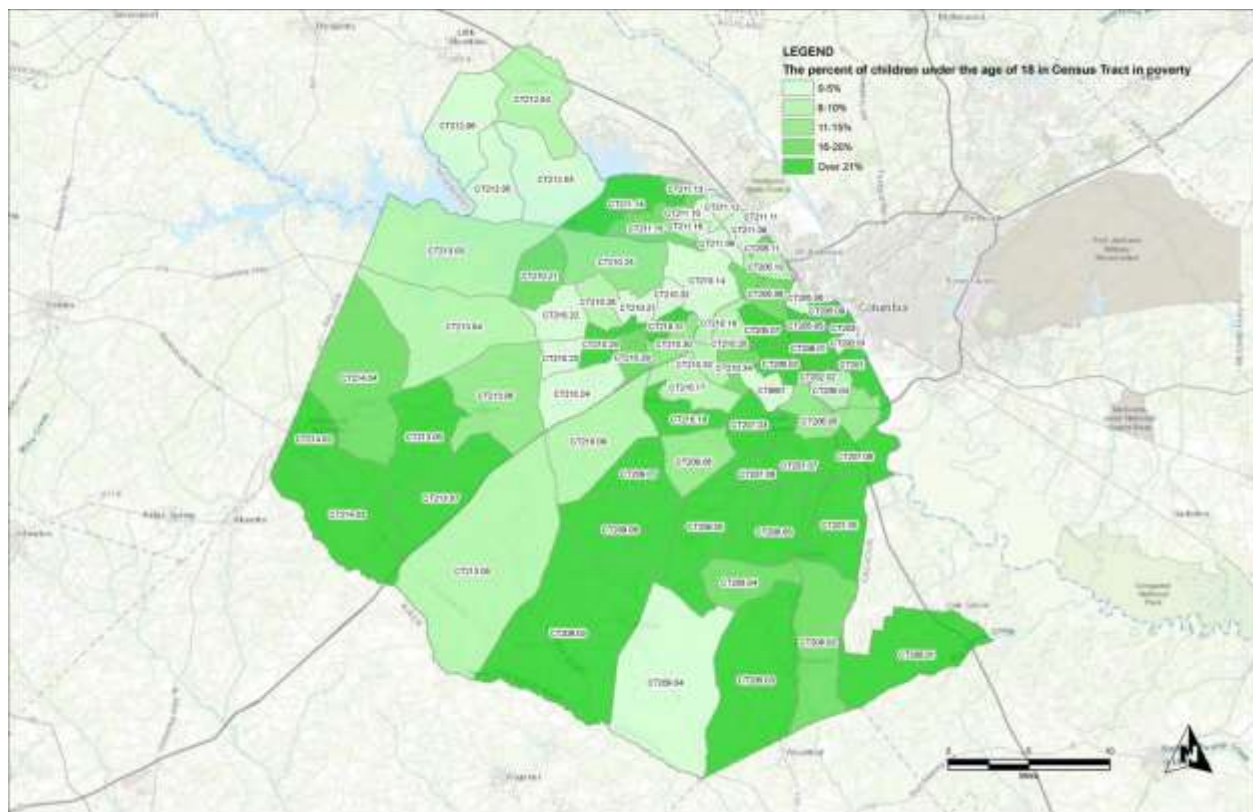

Approximately 12.7 percent of the County's population is identified by the Census as living in poverty, however, fifteen of the County's census tracts had populations where more the 20% of the population were identified as being in poverty. These census tracts are concentrated in the southeast portion of the County and in the census tracts just west of the City of Columbia. Some of these census tracts are in areas identified as having high chance of flooding as well as scoring high on social vulnerability as explained in Section 2.4 of the document. These are areas where the County focused on identifying projects with area benefits in order to assist some of the poorest residents within the County. It should also be noted that many of these areas of concentration of poverty also align with areas of concentration of Black or African American populations and disabled populations. Therefore, attempting to target projects in these areas provides benefits to several targeted vulnerable and minority populations.

Figure 1-4: Percent of Census Tract Populations in Poverty - Lexington County

One of the notable characteristics regarding poverty within the County is the higher percentage of children living in poverty. Approximately 18.3 percent of children in the County live in poverty. More importantly, 17 census tracts have population where 33 percent or more of the children, one in every three children, are in poverty. This includes five census tracts where more than half of the children, 50% or greater, live in poverty. The County's intent to address projects in some of its poorest areas resulted in projects benefiting populations in these poorest counties, including projects which benefit the areas containing the high concentrations of children in poverty.

Figure 1-5: Percent of Census Tract Populations Under Age 18 in Poverty - Lexington County

Lexington County made significant efforts to not only identify projects which could have beneficial impacts to vulnerable populations such as the disabled and elderly but also attempted to spread the projects geographically in order to benefit a more diverse population throughout the County. Funding limitations, regulatory requirements and a variety of other factors made it difficult to undertake some of the projects the County had prioritized but attempts were made to allow for the greatest benefits available to key populations. Due to limited housing projects that could meet mitigation definitions while still benefitting LMI populations, fair housing activities targeted at these populations are limited to the buyout program as described later in this document. As with all County programs, discrimination based on any of the fair housing factors is strictly prohibited. Development of any County projects/programs and participation in those projects/programs is entirely based on ability to address mitigation needs in compliance with all federal, state and local laws.

2. Mitigation Needs Assessment

2.1 Introduction

A critical component of this Action Plan, as required by the Federal Register, is the County's Mitigation Needs Assessment. In order to identify, develop and consider projects and to ultimately assist in informing the allocation of CDBG-MIT funds, a mitigation needs assessment must be conducted. The development of this assessment requires that the County, "identify and analyze all significant current and future disaster risks" and "use the most recent risk assessment completed or currently being updated through the FEMA HMP process to inform the use of CDBG-MIT funds." In order to accomplish this the

County conducted an analysis of the its Hazard Mitigation Plan which is included as part of the All-Natural Hazard Risk Assessment and Hazard Mitigation Plan for the Central Midlands Region of South Carolina. This HMP is currently in the process of being updated, however, it is still in the preliminary phases of development and funds are still being identified and secured for plan development. It should also be noted that this HMP was developed before the impacts of the County's most recent Presidentially declared disasters which qualified the County for initial CDBG-DR funds and the resulting CDBG-MIT funds. Therefore, some of the impacts from those events, particularly those involving infrastructure, were not accurately accounted for in the HMP as they relate to the utilization of the County's CDBG-MIT funds. The County had to account for these impacts and factors in addition to the information obtained from the HMP analysis.

This assessment must also analyze hazard risks which impact HUD defined Most Impacted and Distressed (MID) regions of the County. Under the Federal Register Notice all of Lexington County is an identified MID area therefore County-wide analysis was conducted. A key beneficial component of the existing HMP was the inclusion of analysis of impacts to socially vulnerable populations. This helped identify area of potential concentration of socially vulnerable populations. This data could then be taken into consideration during project development and consideration.

Purpose of the Mitigation Needs Assessment

The purpose of this Community Development Block Grant (CDBG) Mitigation (MIT) needs assessment is to examine current hazards as well as future risks as they relate to community lifelines. Community lifelines are key operations that enable the continuous operation of government functions and critical business and is essential to human health and safety or economic security. The key lifelines are identified below:

- Safety and security
- Food, water, sheltering
- Health and medical
- Energy (Power and Fuel)
- Communications
- Transportation
- Hazardous Material

The lifelines are designed to highlight priority areas and interdependencies. Each lifeline is comprised of multiple components and essential elements of information needed to stabilize an incident.

The needs assessment will be used to develop a CDBG-MIT action plan to identify activities designed to increase resilience to community lifelines and ensure they can continue to function despite the occurrence of future disasters. and reduce or eliminate the long-term risk of loss of life, injury, damage to and loss of property, and suffering and hardship, by lessening the impact of future disasters. The CDBGMIT action plan will also prioritize activities that benefit vulnerable and lower-income individuals and communities while also identifying projects that will benefit areas that have been impacted by disasters.

2.2 Mitigation Assessment Summary

As part of the development of this Action Plan Lexington County conducted a Mitigation Needs Assessment of the County's HMP as required under federal guidelines. The existing hazard mitigation plan identified 15 hazards which included:

- Winter Weather
- Drought
- Lightning
- Fog
- Tropical Storms
- Extreme Cold
- Extreme Heat
- Tornadoes
- Hail
- Flash Flood
- Riverine Flood
- Wind
- Earthquake
- Thunderstorm
- Wildfires

Each of the 15 hazards were then assigned an overall risk designation of high, medium or low based upon several criteria including:

- Geographic Extent
- Probability of Future Occurrence
- Vulnerability Assessment
- Magnitude of Severity

The County's assessment of the HMP involved an additional layer of analysis to identify the level of vulnerability and consequences to community lifelines. This additional layer of analysis was critical in meeting the CDBG-MIT requirements to evaluate hazards based on risks and impacts posed to these community lifelines. A scoring criteria was developed which resulted in the following results.

Table 2-1: Vulnerability and Consequence to Community Lifelines Scores for All Hazards

Hazard*	Vulnerability and Consequence to Community Lifelines
Winter Snow and Ice Storms	33
Hurricane and Tropical Storms	32
Flood	30
Tornado	30
Wildfire	28
Earthquake	26
Thunderstorm	25
Wind	25
Lightning	24
Hail	22
Drought	21
Extreme Temperatures	17
Fog	16

* As part of this analysis and as included in the HMP, Extreme Cold and Heat were combined
Extreme Temperatures and Flash Flooding and Riverine Flooding were combined under Flood.

Results from this analysis were utilized to assist in the identification and evaluation of projects. As can be seen in Table 1-1, two of the highest scoring hazards, Hurricane/Tropical Storm and Flood both result in flood related disasters. These are also the types of hazards which have resulted in significant impacts, damages and financial loss for the County in recent years. So much so that the County is still recovering from flood impacts from events occurring in 2015. This being the case, the County prioritized mitigation activities to address flood related hazards and impacts for its CDBG-MIT allocation.

The County coordinated its project identification process between the Community Development, Emergency Management and Public Works Departments. This included the consideration of a variety of projects including but not limited to the development of a stormwater retention pond, expansion of the buyout program, improving the County emergency siren system, and improvements to the County's infrastructure and stormwater management systems. The County did discuss and consider projects that were relevant to non-flood disasters but these were quickly removed from consideration as it was deemed a most effective and prudent use of funds to address hazards, particularly flooding, which have historically had the most frequent and considerable impacts on the County. In order to address continued issues and dangers posed by properties located in flood prone areas and subject to repetitive loss the County decided to continue its property buyout program to help continue to mitigate risk to properties located in these hazard areas.

The County Disaster Recovery Office worked with the Public Works Department to first, identify the LMI areas of the County to help narrow down locations where projects could even take place in order to meet the required, HUD defined, LMI objectives. Once these areas were identified by block groups County staff reviewed the history of impacts in these areas to help identify potential project that could help mitigate future impacts or loss from hazard events. A variety of obstacles limited which projects could be pursued and included factors such as available land, cost limits, LMI national objective requirements, timeliness and readiness issues, cost/benefit concerns as well as a desire by the County to avoid limiting the geographic benefit by focusing projects or a project in a single region of the County. Significant effort was placed on identifying projects that could help benefit a substantial number of people while still meeting many of the goals the County intended for these funds. This included such considerations as continuing the CDBG-DR initiated residential buyout program while still considering more widely impactful infrastructure projects which would expand beneficiaries beyond just those engaged in the buyout program. To this end, the County considered several infrastructure project which could be undertaken to help mitigate impacts from flooding throughout the County. Flooding events are exacerbated by substandard road conditions and associated stormwater management systems, result is substantial damage to the road infrastructure in the County, hampers accessibility and can even result in geographic isolation as flood waters cut off neighborhoods and leave residents stranded. By considering additional infrastructure improvement projects, the County was able to identify several road and drainage improvement projects that could help increase safety and mitigate impacts from flooding impacts during heavy rain events.

One of the County's main priorities as part of its project development and consideration process was to increase safety and help mitigate loss of life and injury during these flood events. To that end, the County met with its first responders to identify any potential projects that could help mitigate loss of life and injury risks. Unfortunately, no projects meeting the CDBG-MIT eligibility criteria could be identified for funding.

By taking all of these considerations into account the County identified the projects and their associated funding allocations provided in Table 1-2.

Table 2-2: Lexington CDBG-MIT Funding

Activity	Current Allocation	Percentage of Total Funding
Administration	\$759,250	5.0%
Planning	\$750,000	4.9%
Public Infrastructure Improvements	\$8,435,750	55.6%
Housing Buyouts	\$5,240,000	34.5%
Total Funding Available	\$15,185,000	100%

Overview of the All-Natural Hazard Risk Assessment and Hazard Mitigation Plan for the Central Midlands Region of South Carolina

The Lexington County, South Carolina Community Development Block Grant MIT Needs Assessment is informed primarily by the *All-Hazard Risk Assessment and Hazard Mitigation Plan for the Central Midlands Region of South Carolina* (HMP) 2016.² The HMP is the most current and in force HMP at the time of the development of this assessment. The purpose of the HMP is to assess the historical impacts of natural hazards to determine high risk areas and identify vulnerabilities. This information is used to identify and prioritize mitigation actions for reducing risk and protecting their citizens from the impacts of natural hazards. The HMP is designed to:

- Describe the natural hazards that most affect and concern each county
-
- Assess vulnerable populations and assets in each county
 - Assess risks varying from one county to another in the region
 - Identify and evaluate goals, actions and projects that reduce the effects of identified hazards
 - Devise an action plan for prioritizing, implementing, and administering recommended mitigation actions and projects
 - Monitor, evaluate, and update the HMP within a five-year period
 - Devise the process that participating jurisdictions could use to incorporate plan recommendations into local plans and capital improvements programs
 - Ensure continued public involvement in the ongoing mitigation planning process

The HMP is intended to be a tool for city and county planners and emergency management official for planning mitigation actions, identifying at-risk areas, infrastructure and vulnerabilities to support the reduction or elimination of risk and safeguard life and property. The objectives of the HMP are:³

² All-Hazard Hazard Risk Assessment and Hazard Mitigation Plan for the Central Midlands Region of South Carolina, 2016 Update, Executive Summary

³ All-Hazard Hazard Risk Assessment and Hazard Mitigation Plan for the Central Midlands Region of South Carolina, 2016 Update, Section 1.2 Plan Objectives

- Coordinate regional resources and personnel to collate the most up-to-date information on natural hazard impacts and mitigation strategies.
- Utilize state-of-the-art scientific techniques to analyze natural hazard risk and impacts.
- Provide an easy to read document that supports evidence-based planning and decision making

Jurisdictions covered by the HMP include the counties of Fairfield, Lexington, Newberry and Richland along with the municipalities within the each of those counties. This assessment will focus on the portion of the HMP that provides the hazard and vulnerability information for Lexington County.

2.3 Overview of Hazards

The HMP has identified 15 natural hazards for which Lexington County has vulnerability. Each of the hazards are analyzed according to the six criteria listed below:

- Perceived risk
- Geographic extent
- Probability of future occurrence
- Vulnerability assessment
- Magnitude and severity
- Overall risk

Perceived risk is assessed using the following categories:

- Least Important
- Somewhat Important
- Very Important

-
- Most Important

The risk categories for Geographical Extent, Probability of Future Occurrence, Vulnerability Assessment, Magnitude and Severity, and the Overall Risk Rating, along with their indicated color association are listed in Table below.

Table 2-3: Risk Assessment Criteria and Values

Geographical Extent	Probability of Future Occurrence	Vulnerability Assessment	Magnitude and Severity	Overall Risk Rating
Isolated	Infrequent	Limited	Low	Low
Limited	Occasional	Moderate	Medium	Medium
Widespread	Likely	Extensive	High	High

Overall risk is categorized as low, medium, or high. These categories are defined below:

- **Low:** Minimal potential impact. The recurrence and potential cost of damage to life and property is minimal.
- **Medium:** Moderate potential impact. The potential damage is more isolated and less costly than a more widespread disaster. There is a moderate threat level to people, critical infrastructure, and/or built environment.
- **High:** Widespread potential impact. The potential for damage is widespread. Hazards have a high recurrence interval and/or pose a high threat to residents, critical infrastructure, and/or built environment.

The risk assessment criteria and values has been combined with the list of hazards in Table 2-4 to provide an over-all snapshot of the hazards and assessment of risk for Lexington County. More detail on each hazard and their impact on the community lifelines are described in Sections 2.6 through 2.18.

Table 2-4: Overall Risk Assessment for Lexington County

Perceived Risk	Hazard	Geographic Extent	Probability of Future Occurrence	Vulnerability Assessment	Magnitude and Severity	Overall Risk
Most Important	Winter Weather	Widespread	Likely	Extensive	High	High
Somewhat Important	Extreme Heat	Widespread	Occasional	Extensive	High	High
Somewhat Important	Droughts	Widespread	Occasional	Extensive	High	High
Very Important	Tornadoes	Isolated	Likely	Extensive	High	High
Most Important	Tropical Storms	Widespread	Occasional	Moderate	Medium	Medium
Most Important	Wind	Limited	Likely	Moderate	Medium	Medium
Somewhat Important	Extreme Cold	Widespread	Likely	Limited	Medium	Medium
Least Important	Earthquakes	Widespread	Infrequent	Moderate	Medium	Medium
Very Important	Flash Floods	Isolated	Occasional	Moderate	Medium	Medium
Very Important	Riverine Floods	Limited	Occasional	Moderate	Low	Medium
Very Important	Lightning	Isolated	Likely	Moderate	Low	Medium
N/A	Hail	Isolated	Occasional	Moderate	Medium	Medium

Most Important	Thunderstorms	Isolated	Likely	Limited	Low	Medium
Least Important	Fog	Isolated	Likely	Limited	Low	Medium
Least Important	Wildfires	Isolated	Occasional	Limited	Low	Low

2.4 Social Vulnerability

In the HMP a system for measuring the sociodemographic make-up of the county is devised that measures how well populations within a census tract can prepare for, respond to, or recover from a hazard. This measure of social vulnerability is derived from eight main vulnerability components including:

- Wealth
- Female headed households
- Age (older)
- Rural and primary sector employment
- Poverty and Unemployment
- Ethnicity (Hispanic)
- No automobile
- Race (Native American)

The social vulnerability scores are tallied and mapped using three categories:

- High social vulnerability
- Medium vulnerability
- Low social vulnerability

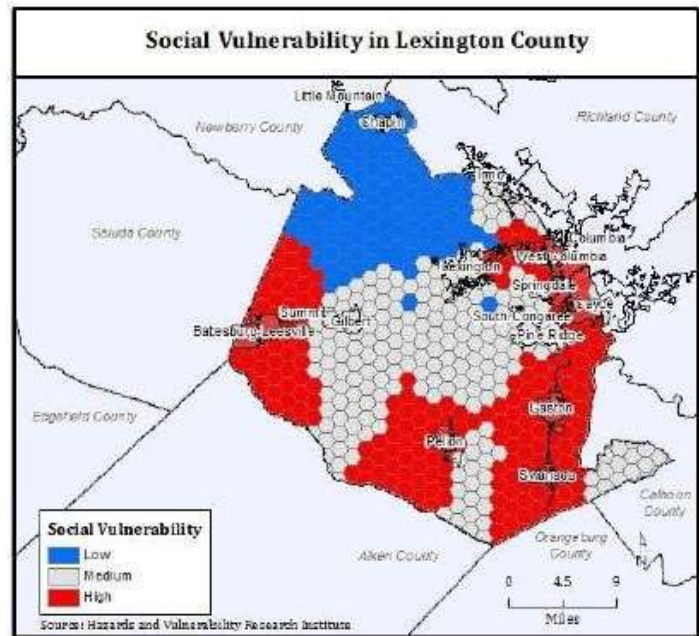

Figure 2-1: Social Vulnerability in Lexington County

Figure 2-1 shows the distribution of the three categories of social vulnerability across the county. Nearly 60,000 of the county's residents live in highly vulnerable areas of the county, mostly in the southern and far eastern and western portions of the county.

After the scores are mapped the social vulnerability map is overlaid with the map of the county hazards to determine the socially vulnerable populations for each hazard.

2.5 Lifeline Assessment

The community lifelines assessment is designed to assist local, state and federal agencies, to better understand how the hazards for which the County has vulnerability and how those hazards can potentially impact those community lifelines. Each of the community lifelines have specific components to further clarify the functions that fall under each lifeline category. The community lifelines, along with their components are identified in Table 2-5.

Table 2-5: Community Lifelines and Components

Safety & Security	Food, Water, Sheltering	Communications
-------------------	-------------------------	----------------

Law Enforcement/Security	Food	Infrastructure
Fire Service	Water	Responder Communications
Search and Rescue	Shelter	Alerts, Warnings, Messages
Government Service	Agriculture	Finance
Community Safety		911 and Dispatch
Transportation	Health and Medical	Hazardous Material (Management)
Highway/Roadway/Motor Vehicle	Medical Care	Facilities
Mass Transit	Public Health	HAZMAT, Pollutants, Contaminants
Railway	Patient Movement	Energy
Aviation	Medical Supply Chain	Power Grid
Maritime	Fatality Management	Fuel

The assessment of the risks to community lifelines from County hazards is conducted by assessing the vulnerability and potential consequence of the hazards to the community lifelines. The categories used to differentiate the levels of vulnerability and consequence are explained in Tables 2-6 and 2-7.

Table 2-6: Lifeline Vulnerability Categories

Vulnerability	Category Description
Low	The lifeline is significantly resilient to the hazard, or the effects of the hazard on facilities and critical systems are isolated.
Moderate	The lifeline has low resilience to the hazard or the effects of the hazard on facilities and critical systems is geographically widespread.
High	The lifeline has low to no resilience to the hazard AND the effects on facilities and critical systems is widespread.

Table 2-7: Lifeline Impact Categories

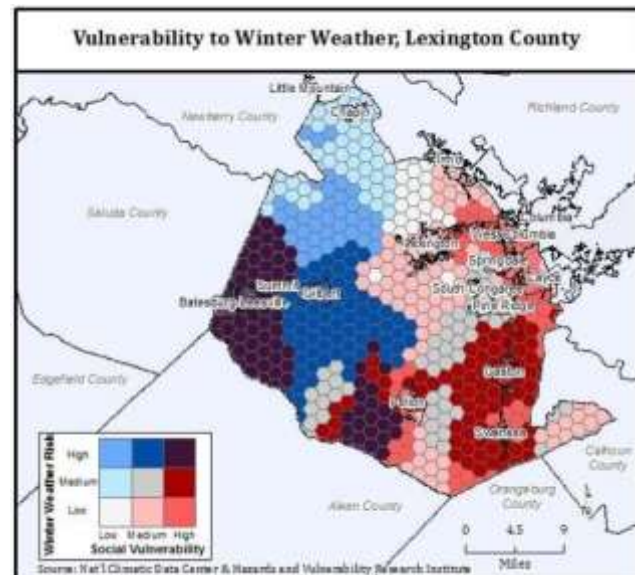

Consequence	Category Description
Low	There is minimal disruption to the lifeline and can be fully functioning in a short period of time.
Moderate	The lifeline is disrupted for a few days while restoration activities are underway.
High	The lifeline is disrupted for potentially weeks while restoration activities are underway.

In order to quantify the level of danger posed to community lifelines from each hazard a scoring criteria was developed and applied to the level of vulnerability and consequence applicable to each lifeline for each of the hazards as described in the tables at the end of each section 2-6 through 2-18. A low categorization is equal to a 1 score. A moderate characterization is equal to a 2 score, and a high characterization is equal to a 3 score. By totaling the scores together among the vulnerability and consequence columns, a vulnerability and consequence community lifeline score can be derived for each hazard.

2.6 Winter Snow and Ice Storms

A winter snow or ice storm are the hazards with the highest perceived risk to Lexington County. Ice storms and winter weather occur nearly every year in the County. On average the County endures 1 to 3 days per year of ice storms and winter weather. High snowfall amounts over 2 inches are rare although as much as 16 inches of snow was recorded in 1973. Ice storms occur more frequently than snowstorms in the county. Accumulations of $\frac{3}{4}$ of an inch of ice are possible which can result in treacherous road conditions. In addition, the accumulation of ice can result in downed tree limbs and power lines causing widespread power outages across the county.

While the entire county is vulnerable to winter snow and ice storms, the western and southwestern portions of the county experiences 1 or 2 additional days of winter snow and ice storms than the eastern portion of the county. Figure 2-2 shows the areas of the county most vulnerable to winter snow and ice storms along

with those areas with populations of social **Figure 2-2: Lexington County Areas Vulnerability to Winter Weather**

Winter snow and ice storms pose a significant risk to the health and safety of residents to Lexington County. Potential impacts include:

- Power outages from severe winter weather conditions in some cases have lasted several days. Such extended power outages can affect the delivery of critical services across the county. Ice on roads can also hinder the delivery of fuel further complicating transportation and preventing the refueling of generators providing temporary power to critical operations.
- Vulnerable populations, particularly individuals who are elderly, small infants, or individuals with health issues, can face serious threats from the cold in the event of power outages including frost bite or hyperthermia. Community shelters may need to be established to house individuals potentially exposed to hazardous conditions.
- Response personnel may be hindered in their response, or put themselves at risk, in responding to calls for assistance due to treacherous road conditions.
- Lack of power can result in greater chances for house fires as individuals burn candles to provide lighting or light fires to stay warm.
- Lack of power can also result in incidents of carbon monoxide poisoning or death due in improper use and placement of generators as individuals run portable generators to provide power to lights, refrigerators, heaters, and other appliances.
- Frozen pipes as a result of extreme weather events can cause serious damage to homes as well as critical facilities and prevent the delivery of critical services to the community.

The economic and financial consequences of a winter snow or ice storm incident will depend on several factors including the length of time the incident lasts, the extent of damages, the level of preparedness taken by communities prior to the incident, how quickly repairs can be made, and how quickly community lifelines can be restored. A summary assessment of the winter snow and ice storms vulnerability and impacts to community lifelines is presented in Table 2-8.

Table 2-8: Winter Snow and Ice Storm Vulnerability and Consequence by Lifeline

Winter Snow and Ice Storms	Vulnerability	Consequence
Safety and Security	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Food, Water, Sheltering	Moderate Vulnerability	High Impact to Lifeline/Services
Communications	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Transportation	High Vulnerability	High Impact to Lifeline/Services
Health and Medical	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Hazardous Material	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Energy (Power and Fuel)	High Vulnerability	High Impact to Lifeline/Services

2.7 Flooding

Since 1960, Lexington County has encountered 47 flooding incidents. Of those, 38 resulted in property damages. Most of the flooding incidents in Lexington County resulted from heavy precipitation that lead to flash flooding. During these incidents, water can rise along smaller creeks and tributaries along the Broad, Congaree and Saluda Rivers. In addition, other areas in the county can also be at risk of flash flooding due to ponding and inadequate drainage. In fact, based on past events, low lying areas and areas downstream from small dams can also be susceptible to flash flooding.

In October of 2015, Lexington County experienced flooding as a result of record setting rainfall totals, up to 17.21 in some areas of the county. The heavy rainfall caused flash flooding, dam breaches and failures, as well as backwater flooding as a result of having to release water from the Lake Murray Dam. Overall, the flooding caused \$27 million in property damage and nearly \$1 million in crop damages. Water systems were affected in the City of Columbia and as a result, schools and business operations were disrupted.

Overall, flooding is the deadliest natural disaster that occurs in the U.S. each year. To address this threat the county uses Flood Rate Insurance Maps (FIRMs) to regulate new development to ensure new

homes and buildings are not erected in **Figure 2-3: 100-Flood Zones, Dam Locations, and flood prone areas.** Figure 2-3 shows the **Locations of Dam Failures from the 2015 Flood** location of the 100-year flood zone

(indicates a 1% annual chance of occurrence) in Lexington County as well as the locations of dams including the dams that failed in the 2015 flood. Risk of flooding in the 100-year flood plain is largely limited to residential structures. There are three critical structures located in the 100-year flood plain. Inside the 100-year flood zone there are approximately 19,474 people with 682 of those individuals with high social vulnerability.

In a 1000-year flood incident, approximately 1,506 buildings would be moderately damaged, and 707. Most of the damage would center around the Town of Lexington. Economic impacts have been estimated at \$710 million. No critical infrastructure is estimated to receive any damage.

Other impacts from flooding in Lexington County could include the following:

- Health risks can be elevated after a flood due to potential issues from hazardous materials spills, releases of untreated sewage and mold growth in flooded areas of buildings.
- Floods may necessitate rescues of individuals from low lying areas or swift water rescues putting first responders at risk.
- If roadways are impassable, first responders may not be able to respond to certain areas of the county.

- Residents may be displaced from their homes while repairs are taking place. Displaced residents may not be able to return to work immediately potentially slowing recovery efforts.
- The flooding may cause a loss of utility services such as water or power due resulting in the closure of schools or businesses until utility services can be restored.
- Flooding increases the number of pollutants and toxicants in local waterways, affecting the ecosystem.
- Extensive or repetitive flooding can decrease home values in affected areas.
- If critical service employees suffer losses, they may not be able to return to work which could limit recovery operations. Figure 2-4 shows the areas of the county vulnerable to flooding as well

as the populations with social vulnerability.

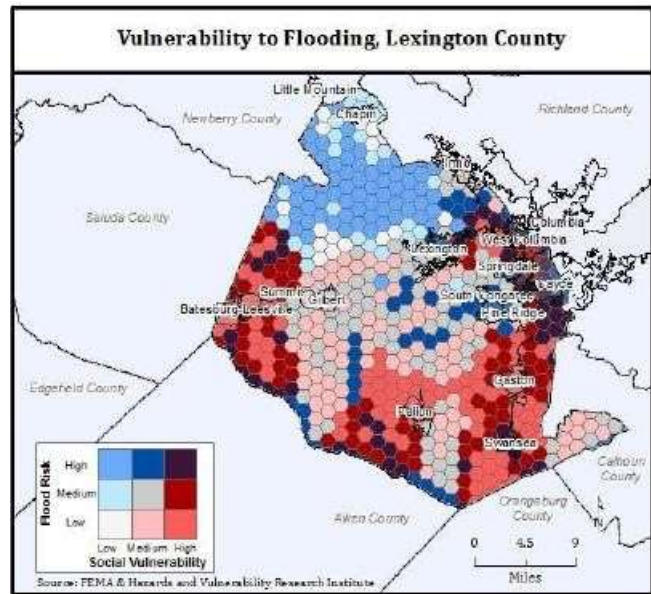

Figure 2-4: Areas of Vulnerability to Flooding in Lexington County

A summary assessment of flood hazard vulnerability and impacts to community lifelines is presented in Table 2-9.

Table 2-9: Flood Hazard Vulnerabilities and Consequences to Community Lifelines

Flooding	Vulnerability	Consequence
Safety and Security	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Food, Water, Sheltering	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Communications	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Transportation	High Vulnerability	High Impact to Lifeline/Services
Health and Medical	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Hazardous Material	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Energy (Power and Fuel)	Moderate Vulnerability	Moderate Impact to Lifeline/Services

2.8 Hurricane and Tropical Storms

A tropical cyclone is a rotating, organized system of clouds and thunderstorms that originates over tropical or subtropical waters and has a closed low-level circulation. Tropical cyclones are categorized as follows:⁴

⁴ National Hurricane Center Website, Tropical Cyclone Climatology, <https://www.nhc.noaa.gov/climo/>

- Tropical Depression: A tropical cyclone with maximum sustained winds of 38 mph (33 knots) or less.
- Tropical Storm: A tropical cyclone with maximum sustained winds of 39 to 73 mph (34 to 63 knots).
- Hurricane: A tropical cyclone with maximum sustained winds of 74 mph (64 knots) or higher. In the western North Pacific, hurricanes are called typhoons; similar storms in the Indian Ocean and South Pacific Ocean are called cyclones.
- Major Hurricane: A tropical cyclone with maximum sustained winds of 111 mph (96 knots) or higher, corresponding to a Category 3, 4 or 5 on the Saffir-Simpson Hurricane Wind Scale.

Hurricanes and/or tropical storms affect Lexington County about every seven years. The hazards associated with hurricanes and tropical storms to Lexington County includes high winds, heavy rainfall, flash flooding, and tornadoes. Given its location, approximately 100 miles from the South Carolina coast, Lexington County is not likely to suffer direct wind damage from a hurricane but can be impacted by property damage from falling trees as well as power outages are very likely from a hurricane. The county may also serve as a receiving area for individuals evacuating from the coastline in advance of an approaching hurricane.

The county has had two Presidentially declared disasters related to hurricanes in the past 20 years. In 1999, Lexington County did not suffer direct damage but received individuals evacuating from coastal counties in advance of Hurricane Floyd. As a result, there was gridlock on the interstate and adjacent roads as motorists sought shelter or were attempting to pass through the county.

In 2004, Tropical Storm Frances brought high winds and spawned tornadoes which uprooted trees, damaged property and caused power outages.

While every part of the county has some level of vulnerability to a hurricane or tropical storm, the southern portion of the county has a greater degree of social vulnerability to such an incident. 11 percent of the population, or approximately 30,166 individuals of the county resides in the southern portion of the county. Of those individuals, 22,328 of them, are deemed to have social vulnerability to the hazard. About 10 percent of the critical infrastructure of the county, building stock, and population are located in this part of the

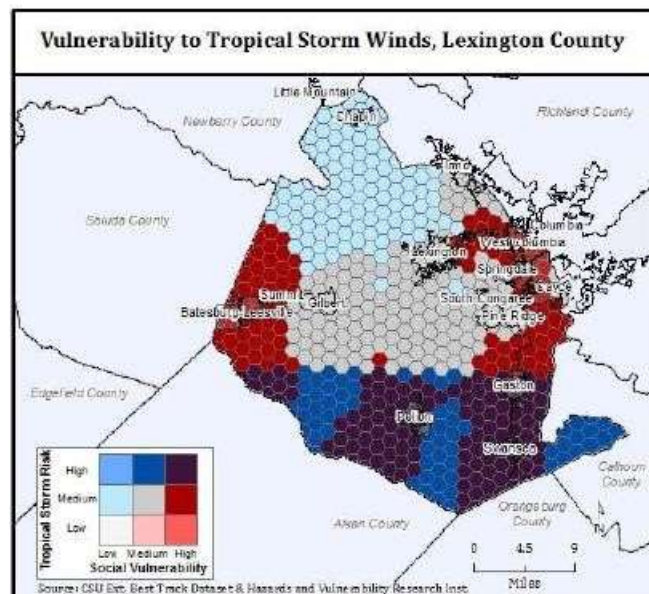

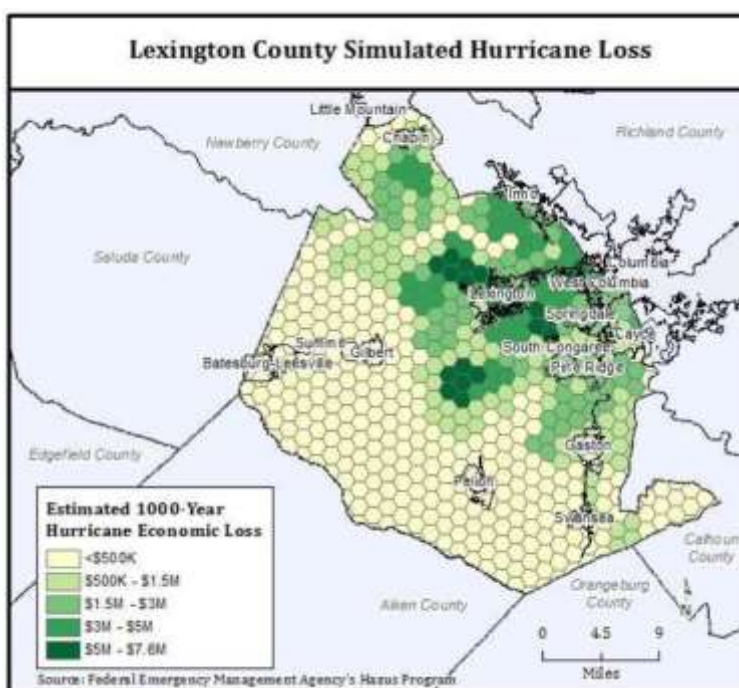

Figure 2-5: Vulnerability to Hurricane and Tropical Storms

county. Figure 2-5 illustrates the areas of greatest impacts from hurricane and tropical storm impacts as well as the socially vulnerable populations living in those areas.

Other impacts from hurricanes and tropical storms in Lexington County could include the following:

- Individuals exposed to hurricanes and tropical storms could be injured from wind-blown debris, falling trees or branches.
- Structures and vehicles can be damaged by falling trees.
- Falling trees or limbs and high winds can damage power lines and result in power outages.
- Extended power outages can hinder or delay the conduct of community lifelines services.
- Downed power lines can prevent passage on roads hindering access for emergency response vehicles.
- Loss of power can lead to house fires as residents use candles to provide light or light fires to keep warm.
- As a receiving jurisdiction of evacuees from coastal communities, community lifelines may become strained as additional people tap into county and city services.
- Streets can be blocked by falling trees and other debris from the high winds during a hurricane or tropical storm.
- Some business operations may be hindered by the additional traffic on the road from evacuees.
- Carbon monoxide poisoning can result in injury or death from the misuse and misplacement of portable generators.
- Cell phone networks and other communications systems can be damaged, or they can be temporarily unavailable during and immediately following a disaster.
- High winds and excessive rain from a hurricane or tropical storm can result in hazardous materials spills.

The financial and economic recovery of the county following a hurricane or tropical storm will vary based upon the scope of the incident, the amount of damage created and the ability of the county and cities to make repairs and restore essential functions and community lifelines. Also, the speed of recovery can also depend on the amount of planning and preparation taken prior to the incident.

A summary assessment of flood hazard vulnerability and impacts to community lifelines is presented in Table 2-10.

Table 2-10: Hurricane and Tropical Storm Vulnerabilities and Consequences to Community Lifelines

Hurricane and Tropical Storms	Vulnerability	Consequence
Safety and Security	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Food, Water, Sheltering	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Communications	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Transportation	High Vulnerability	High Impact to Lifeline/Services
Health and Medical	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Hazardous Material	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Energy (Power and Fuel)	High Vulnerability	High Impact to Lifeline/Services

2.9 Tornadoes

A tornado is a narrow, violently rotating column of air that extends from a thunderstorm to the ground. About 1,200 tornadoes hit the U.S. yearly.⁵ The strength of tornadoes is measured using the Enhanced Fujita (EF) Scale. The scale categorizes the intensity of tornadoes by using six categories EF0 to EF6 based upon the estimated wind speeds and damage that they cause. The six categories of the EF Scale, associated wind speeds and damages are listed in Table 2-11.

Table 2-11: Enhanced Fujita Scale

Tornado Category	Wind Speed Estimate (Miles Per Hour)	Potential Damage
EF0	65 - 85	Minor damage. Peels surface off some roofs; some damage to gutters or siding; branches broken off trees; shallow-rooted trees pushed over. Confirmed tornadoes with no reported damage.
EF1	86 - 110	Moderate damage. Roofs severely stripped; mobile homes overturned or badly damaged; loss of exterior doors; windows and other glass broken.
EF2	111 - 135	Considerable damage. Roofs torn off from well-constructed houses; foundations of frame homes shifted; mobile homes completely destroyed; large trees snapped or uprooted; light-object missiles generated; cars lifted off ground.
EF3	136 - 165	Severe damage. Entire stories of well-constructed houses destroyed; severe damage to large buildings such as shopping malls; trains overturned; trees debarked; heavy cars lifted off the ground and thrown; structures with weak foundations are badly damaged
EF4	166 - 200	Devastating damage. Well-constructed and whole frame houses completely leveled; some frame homes may be swept away; cars and other large objects thrown and small missiles generated.
EF5	>200	Incredible damage. Well-built frame houses destroyed with foundations swept clean of debris; steel-reinforced concrete structures are critically damaged; tall buildings collapse or have severe structural deformations; cars, trucks, and trains can be thrown approximately 1 mile

In Lexington County a tornado occurs about every other year. While typically low magnitude (F0, F1) higher magnitude tornadoes have occurred in the county. Figure 2-7 shows the strength and tracks of tornadoes that have occurred in the county over the years.

Every structure and person are at risk of tornadoes in Lexington County. Based on historic data there is a slightly higher risk in the northwest and southwest corners of the county. Tornadoes in the county can be generated from severe thunderstorms or from tropical storms and hurricanes.

From 1994 to 2014, 24 tornadoes have occurred in the county. In 1994, an F3 tornado touched down in the county south-southeast of Lexington. The tornado moved to the north and east damaging 200 homes, 5 electric substations, as well as many businesses, several churches and public buildings. In addition, 40 people were injured.

⁵ The National Severe Storms Laboratory, Severe Weather 101 – Tornadoes, <https://www.nssl.noaa.gov/education/svrwx101/tornadoes/>

Areas of high vulnerability to tornadoes are defined as areas of the county where there have been a high frequency of past tornado warnings (more than 0.625 warnings per year). These areas of higher risk are

shown in Figure 2-8 along with the populations of social vulnerability to tornadoes. The high-risk areas contain 6% of the critical infrastructure for the county, \$3.4 billion (7%) of building stock, 6% of the county population, and approximately 2,376 people (or 2%) of the socially vulnerable population in the county.

Tornadoes have the potential to pose a significant risk to the population and can create dangerous situations for public health and safety officials. Impacts to Lexington County can include:

- Individuals exposed to a tornado can be struck by flying debris, falling tree limbs, or downed trees, causing serious injury or death.
- Mobile or manufactured homes may suffer substantial damage as they would be more vulnerable than typical site-built structures.
- Tornadoes often result in widespread power outages, increasing the risk to more vulnerable portions of the population who rely on power for health and/or life safety.
- Extended power outages can hinder or delay the conduct of community lifelines services.
- Downed power lines can prevent passage on roads hindering access for emergency response vehicles.
- Loss of power can lead to house fires as residents use candles to provide light or light fires to keep warm.

delayed as damages to critical facilities are being repaired.

- Recovery of community lifelines may be

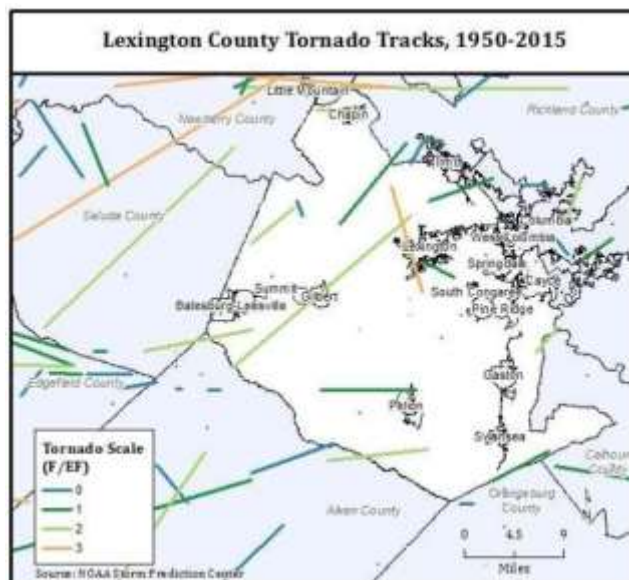

Figure 2-7: Strength and Track of Tornadoes in Lexington County

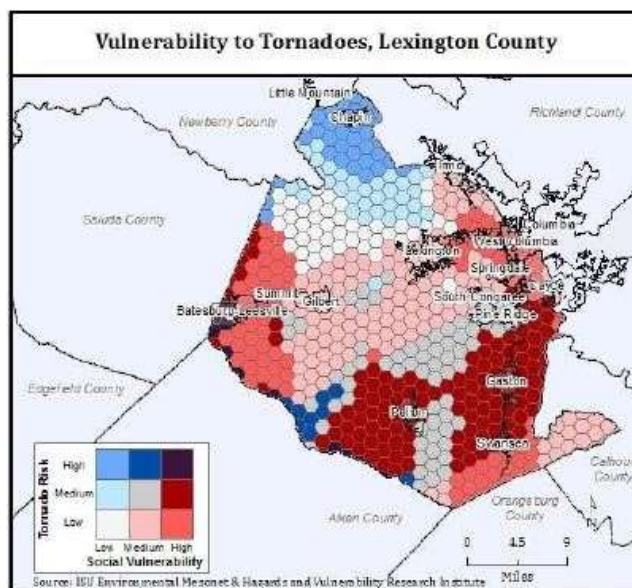

Table 2-8: Vulnerability to a Tornado in Lexington County

The financial and economic recovery of the county following a hurricane or tropical storm will vary based upon the scope of the incident, the amount of damage created and the ability of the county and cities to make repairs and restore essential functions and community lifelines. Also, the speed of recovery can also depend on the amount of planning and preparation taken prior to the incident.

A summary assessment of flood hazard vulnerability and impacts to community lifelines is presented in Table 2-12.

Table 2-12: Tornado Vulnerabilities and Consequences to Community Lifelines

Tornadoes	Vulnerability	Consequence
Safety and Security	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Food, Water, Sheltering	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Communications	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Transportation	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Health and Medical	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Hazardous Material	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Energy (Power and Fuel)	High Vulnerability	High Impact to Lifeline/Services

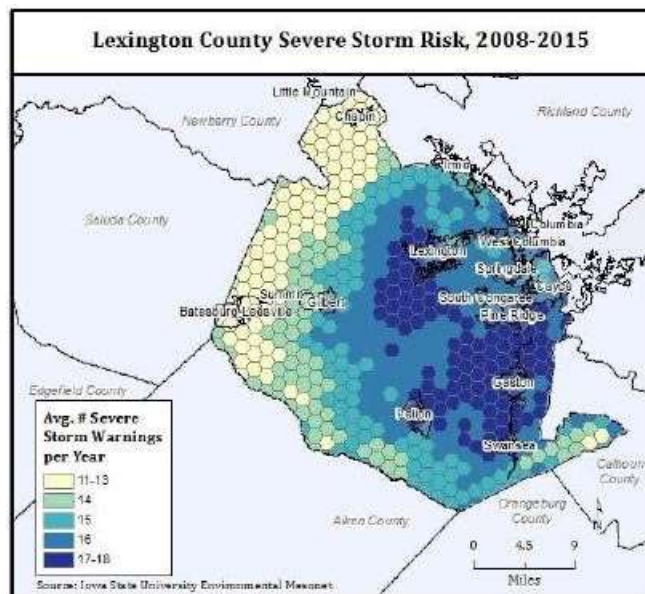

2.10 Thunderstorm

Severe thunderstorms are quite common in Lexington County. Approximately 11 to 18 severe thunderstorm warnings are issued annually by the local National Weather Service Office. The region can see on average up to 12 days per year with rainfall amounts of 1 inch or more, 30 days per year with rainfall between 1/2 inch and 1 inch, and about 70 days per year with rainfall amounts of less than 1/2 inch.⁶ Thunderstorms can be accompanied by lightning, high winds, torrential rains, and hail.

All of Lexington County is susceptible to thunderstorms, however, based upon the location of storm warnings each year, there appears to be a greater propensity for thunderstorms in the eastern half of the county. Figure 2-14 illustrates the locations of storm warnings from 2008 to 2015.

Over the past 54 years there have been 41 severe thunderstorm incidents in the county with 38 of those resulting in property damage. In the future there is the likelihood of increase occurrences of severe thunderstorms with a shortening of return periods.

More than 40 percent of the county's infrastructure resides in thunderstorm high risk areas. These areas receive more than 16 thunderstorm warnings per year. Also, in the area of high risk is 42 percent of the county's building stock, 45 percent of the population of the county and 39 percent of the county's population of individuals with social vulnerabilities. Figure 2-15 shows the overlap between the area of the county at high risk from

severe thunderstorms and populations of socially vulnerable individuals in Lexington **Figure 2-9:**
Average Number of Storm Warnings

County.

from 2008 to 2015

Thunderstorms have the potential to pose a significant risk to the population and can create dangerous situations for public health and safety officials. Impacts to Lexington County can include:

- Individuals exposed to a severe thunderstorm can be struck by flying debris, downed trees or limbs causing serious injury or death.
- Structures can be damaged by flying debris or falling trees resulting in damage.
- Severe thunderstorms can hinder transportation in the county and provide challenges to response agencies answering calls for assistance.
- Roadways can be blocked by debris from a severe thunderstorm, hindering movement around the county and the movement of response vehicles.

⁶ SCDNR, n/d. South Carolina Climate. http://www.dnr.sc.gov/climate/sco/ClimateData/cli_sc_climate.php

- Power outages can result from the high winds and downed trees and limbs from a severe thunderstorm.

-
- Essential staff may not be able to report to work in a severe thunderstorm.
 - Power outages might place individuals reliant on oxygen or other electrically operated health and safety devices at risk.
 - Power outages may affect the ability of government operations and local businesses to provide essential services.
 - Older structures may suffer more serious impacts from severe thunderstorms as they may not be constructed to the same standards as newer structures.
 - First responders will be exposed to potential hazards on responding to calls for assistance such as down power lines, heavy rains, hail, and falling trees.
 - Loss of power can lead to house fires as residents use candles to provide light or light fires to keep warm.
 - Recovery of community lifelines may be delayed as damages to critical facilities are being repaired.
 - Cell phone operations and other communications equipment may be adversely affected by storm conditions.

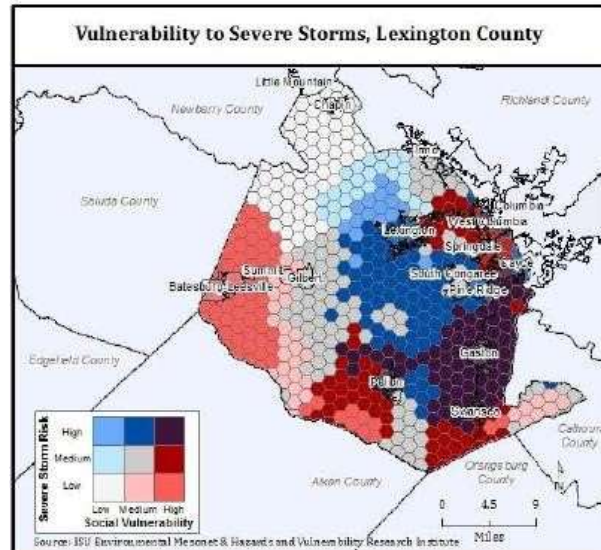

Figure 2-10: Vulnerability to Severe Thunderstorms in Lexington County

The financial and economic recovery of the county following a thunderstorm will vary based upon the scope of the incident, the amount of damage created and the ability of the county and cities to make repairs and restore essential functions and community lifelines. Also, the speed of recovery can also depend on the amount of planning and preparation taken prior to the incident.

A summary assessment of thunderstorm hazard vulnerability and impacts to community lifelines is presented in Table 2-13.

Table 2-13: Thunderstorm Vulnerabilities and Consequences to Community Lifelines

Thunderstorm	Vulnerability	Consequence
Safety and Security	Low Vulnerability	Low Impact to Lifeline/Services
Food, Water, Sheltering	Moderate Vulnerability	Low Impact to Lifeline/Services
Communications	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Transportation	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Health and Medical	Low Vulnerability	Low Impact to Lifeline/Service

Hazardous Material	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Energy (Power and Fuel)	High Vulnerability	High Impact to Lifeline/Services

2.11 Lightning

Lightning is the visible discharge of electricity that occurs when a region of a cloud acquires an excess electrical charge, either positive or negative, that is sufficient to break down the resistance of air.⁷ Energy from lightning can heat the air to about 18,000 degrees Fahrenheit and rapidly expand causing thunder.⁸ A bolt of lightning can contain up to one billion volts of electricity and a single thunderstorm can cause hundreds of lightning strikes.

From 1986 to 2012 there have been 149,258 lightning incidents in Lexington County. 39 of these incidents resulted in property damage. 2 of the incidents resulted in fatalities.

The entire county is at risk from lightning strikes; however, historical records of lightning strikes show the greatest concentration of lightning strikes to have taken place in the southeastern portion of the county as illustrated in Figure 2.11.

Since 1960, lightning strikes have caused \$2,162,403 in damages. Most of these damages consist of lightning striking homes and setting them on fire. Lightning has also done \$15,927 dollars in damage to crops in the county. Lightning has also damaged trees, barns and other facilities. Besides causing fires, a lightning strike can also cause severe damage to electrical components if not equipped with surge protection.

The areas of greatest vulnerability to lightning in the county experience more than

31,800 cloud to ground lightning strikes per year. About one third of the county's critical infrastructure, population and building stock are located in the highest risk area of the county for lightning strikes. There are also approximately 53,430 socially vulnerable

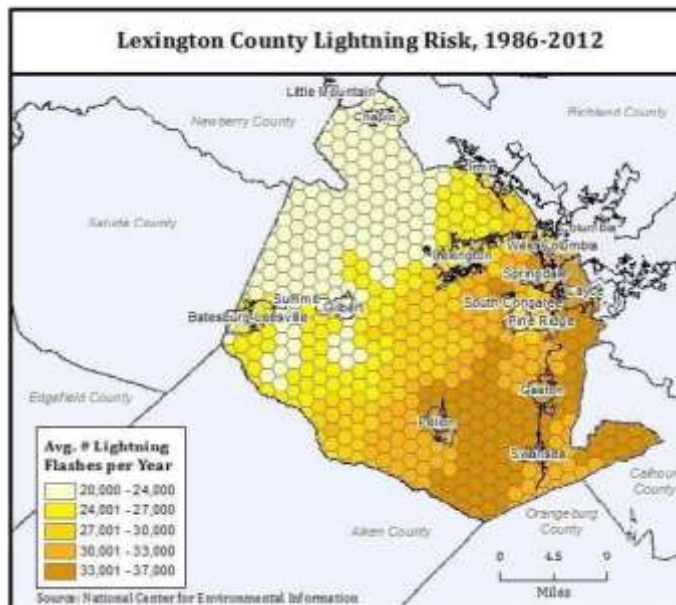

Figure 2-11: Lightning Strikes in Lexington County

⁷ Lightning, Britannica.com, <https://www.britannica.com/science/lightning-meteorology>

⁸ Severe Weather 101: Lightning Basics, <https://www.nssl.noaa.gov/education/svrwx101/lightning/>

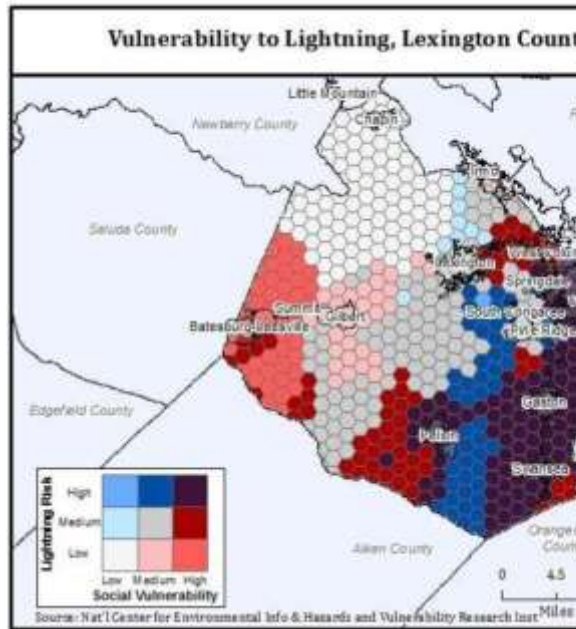

Figure 2-12: Vulnerability to Lightning in Lexington County

individuals located in the lightning high risk area. The areas of social vulnerability in relation to the lightning hazard in Lexington County are shown in Figure 2-12.

Lightning has the potential to pose a significant risk to the population and can create dangerous situations for public health and safety officials. Impacts to Lexington County can include:

- Lightning has the potential to pose a significant risk to the population and can create dangerous situations for public health and safety officials. Impacts to the Lexington County can include:
- Individuals can be struck by directly lightning which can cause serious harm or death. Individuals can also experience lightning shocks standing under trees or near other objects that have been struck by lightning. These incidents can also result in serious harm or death.
- Trees struck by lightning can fall or limbs can separate causing injuries to individuals nearby or damage to nearby structures.
- Lightning strikes and cause structure fires and wildfires creating risk of harm to residents and first responders.
- Lightning can cause power surges and power outages affecting government and business operations.
- Lightning can damage or affect communications systems.
- Loss of power can lead to house fires as residents use candles to provide light or light fires to keep warm.
- Power outages might place individuals reliant on oxygen or other electrically operated health and safety devices at risk.
- Recovery of community lifelines may be delayed as damages to critical facilities are being repaired.

The financial and economic recovery of the county following a lightning incident will vary based upon the scope of the incident, the amount of damage created and the ability of the county and cities to make repairs and restore essential functions and community lifelines. Also, the speed of recovery can also depend on the amount of planning and preparation taken prior to the incident.

A summary assessment of lightning hazard vulnerability and impacts to community lifelines is presented in Table 2-14.

Table 2-14: Lightning Vulnerabilities and Consequences to Community Lifelines

Lightning	Vulnerability	Consequence
Safety and Security	Moderate Vulnerability	Low Impact to Lifeline/Services
Food, Water, Sheltering	Moderate Vulnerability	Low Impact to Lifeline/Services
Communications	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Transportation	Low Vulnerability	Low Impact to Lifeline/Services
Health and Medical	Moderate Vulnerability	Low Impact to Lifeline/Services
Hazardous Material	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Energy (Power and Fuel)	High Vulnerability	Moderate Impact to Lifeline/Services

2.12 Wind

Wind is the horizontal movement of air across the surface of the earth. Gases move from high-pressure areas to low pressure areas. The bigger the difference in the pressures, the faster the air will move from the high pressure to the low pressure.⁹ High winds are commonly associated with certain weather events such as thunderstorms, hurricanes and tornadoes. High winds are capable of causing damage to structures, trees, and power lines.

In Lexington County, wind gusts of 58 mph or more are frequently experienced. Wind gusts as high as 92 mph have been experienced. On average, high wind incidents occur monthly in the county. From 1960 to 2014 there were 490 wind incidents in the county. Of those, 170 wind incidents resulted in property damages. Total losses from those incidents are estimated at \$2,312,724. There was also one fatality and

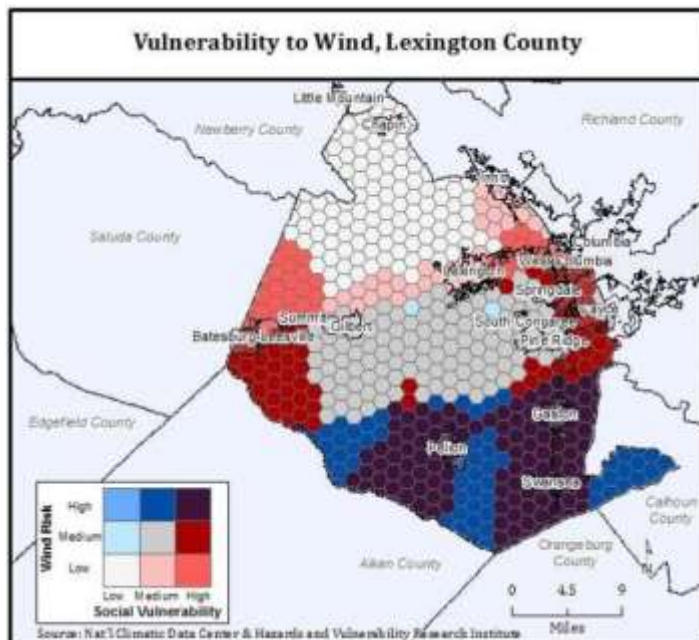

⁹ SciJinks, Wind. <https://scijinks.gov/wind/>

14 injuries from those incidents. Most of the incidents consisted of trees down, power lines down, trees on homes, roof damages or damages to sheds and carports.

The entire county is vulnerable to the impacts of high winds. Because high winds are often associated with thunderstorms, the area of greatest risk from high winds lies in the central and southern parts of the county as outlined in

Section 2.10:

Thunderstorm. In southern Lexington County, the areas of high social vulnerability coincide with more than two days of high winds per year. Eleven percent of the county's critical infrastructure, 6 percent of the building stock, 12 percent of the population, and approximately 26 percent of the socially vulnerable populations of the county reside in this area. The areas of **Figure 2-13: Vulnerability to Wind in Lexington County** social vulnerability in relation to the wind hazard in Lexington County are shown in Figure 2-13.

Wind incidents have the potential to pose a significant risk to the population and can create dangerous situations for public health and safety officials. Impacts to Lexington County can include:

- Individuals exposed to high winds can be struck by flying debris, downed trees or limbs causing serious injury or death.
- Structures can be damaged by flying debris or falling trees resulting in damage.
- Roadways can be blocked by debris from a severe thunderstorm, hindering movement around the county and the movement of response vehicles.
- Power outages can result from the high winds and downed trees and limbs.

- Power outages might place individuals reliant on oxygen or other electrically operated health and safety devices at risk.
- Power outages may affect the ability of government operations and local businesses to provide essential services.
- Older structures, sheds and car ports may suffer damage as they may not be constructed to the same standards as newer structures.
- First responders will be exposed to potential hazards on responding to calls for assistance such as down power lines and falling trees and limbs.
- Loss of power can lead to house fires as residents use candles to provide light or light fires to keep warm.
- Recovery of community lifelines may be delayed as damages to critical facilities are being repaired.

The financial and economic recovery of the county following a wind incident will vary based upon the scope of the incident, the amount of damage created and the ability of the county and cities to make repairs and restore essential functions and community lifelines. Also, the speed of recovery can also depend on the amount of planning and preparation taken prior to the incident.

A summary assessment of wind hazard vulnerability and impacts to community lifelines is presented in Table 2-15.

Table 2-15: Wind Vulnerabilities and Consequences to Community Lifelines

Wind	Vulnerability	Consequence
Safety and Security	Low Vulnerability	Low Impact to Lifeline/Services
Food, Water, Sheltering	Moderate Vulnerability	Low Impact to Lifeline/Services
Communications	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Transportation	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Health and Medical	Low Vulnerability	Low Impact to Lifeline/Service
Hazardous Material	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Energy (Power and Fuel)	High Vulnerability	High Impact to Lifeline/Services

2.13 Hail

Hail is a form of precipitation consisting of solid ice that forms inside thunderstorm updrafts. Hailstones are formed when raindrops are carried upward by thunderstorm updrafts into extremely cold areas of the atmosphere and freeze. They then grow by colliding with liquid water drops that freeze on the

hailstones surface. The hailstone eventually falls when the updraft weakens or when the weight of the hailstone grows to the point that the updraft can no longer support its weight.¹⁰

In Lexington County, incidents of hail are experienced at least every six months. Hailstorms typically occur during spring thunderstorms from March through May. There have been 283 hail incidents from 1960 to 2014. Sixty-eight of these incidents resulted in property damages totaling \$1,665,131. Damage to roofs, vehicles and trees were reported from these incidents. Damage to crops has also been reported. No injuries or deaths were reported. The size of the hailstones during these incidents were compared to quarters, hen eggs, golf balls and ping pong balls.

The entire county is susceptible from hail; however, the county has experience large hail sizes, up to 2.5" in diameter, in the central and southern parts of the county. This correlates to the areas of greatest risk from thunderstorms as discussed in Section 9:

Thunderstorms. There are small pockets of high vulnerability to hail incidents in various parts of the county including the BatesburgLeesville and the Cayce area. In these higher vulnerability areas is 12 percent of the county's critical infrastructure, 6 percent of the building stock, 5 percent of the population and 7 percent of high social vulnerability populations. The areas of social vulnerability in relation to the hail hazard in Lexington County are shown in Figure 2-14.

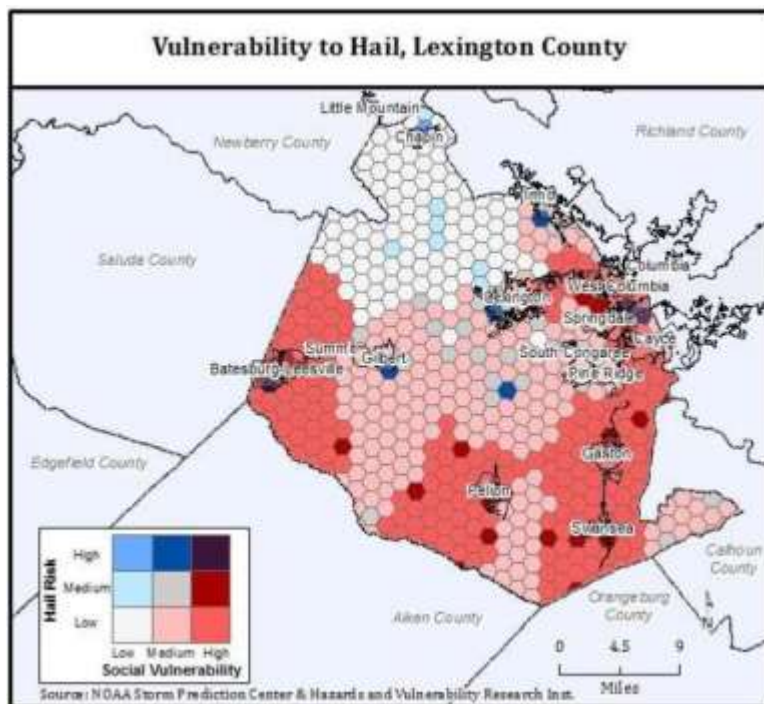

Figure 2-14: Vulnerability to Hail in Lexington County

Hail has the potential to pose a significant risk to the population and can create dangerous situations for public health and safety officials. Impacts to Lexington County can include:

- Individuals and first responders exposed to a storm may be struck by hail, falling branches, fall trees or other debris causing injuries or fatalities.
- Hail incidents can often cause extensive roof damage to structures to residential structures and broken windows.
- Insurance claims can rise as a result of a hail incident creating a rise in insurance premium costs.

¹⁰ Severe Weather 101, Hail, <https://www.nssl.noaa.gov/education/svrwx101/hail/>

- Hail incidents can severely damage vehicles causing hardships to residents as well as potentially affecting governmental and business operations.
- Travel can be perilous during a hail incident delaying response to calls for assistance from first response agencies or potentially harming first responders.
- Power outages might place individuals reliant on oxygen or other electrically operated health and safety devices at risk.
- Power outages may affect the ability of government operations and local businesses to provide essential services.
- Loss of power can lead to house fires as residents use candles to provide light or light fires to keep warm.
- Recovery of community lifelines may be delayed as damages to critical facilities are being repaired.
- Cell phone operations and other communications equipment may be adversely affected by hail damage.
- Hail incidents can cause extensive damage to agricultural crops resulting economic losses to farms and the surrounding communities.
- Hail incidents can injure or kill livestock and wildlife in the county.

The financial and economic recovery of the county following a wind incident will vary based upon the scope of the incident, the amount of damage created and the ability of the county and cities to make repairs and restore essential functions and community lifelines. Also, the speed of recovery can also depend on the amount of planning and preparation taken prior to the incident.

A summary assessment of wind hazard vulnerability and impacts to community lifelines is presented in Table 2-16.

Table 2-16: Hail Vulnerabilities and Consequences to Community Lifelines

Hail	Vulnerability	Consequence
Safety and Security	Moderate Vulnerability	Low Impact to Lifeline/Services
Food, Water, Sheltering	Moderate Vulnerability	Low Impact to Lifeline/Services
Communications	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Transportation	Moderate Vulnerability	Low Impact to Lifeline/Services
Health and Medical	Moderate Vulnerability	Low Impact to Lifeline/Services
Hazardous Material	Moderate Vulnerability	Low Impact to Lifeline/Services
Energy (Power and Fuel)	Moderate Vulnerability	Low Impact to Lifeline/Services

2.14 Fog

Fog is a cloud of small water droplets that is near ground level and sufficiently dense enough to reduce horizontal visibility to less than 1,000 meters (3,281 feet).¹¹ The reduced visibility caused by the fog can be a factor in aircraft, motor vehicle, and boating accidents.

In Lexington County fog is a common occurrence particularly in the fall and spring months. On average the county experiences approximately 25 days of fog per year in the western part of the county and up to 107 days of fog in the east central portion of the county. There is no specific data regarding property damage since fog does not cause property damage, but fog can be a contributing factor to accidents, particularly, motor vehicle accidents.

According to the Federal Highway

Administration, in the U.S. each year 38,700 vehicle crashes occur in fog. Over 600 people are killed and more than 16,300 people are injured in these crashes annually.¹²

In the areas of high risk of fog are approximately 26 percent of the county's critical infrastructure, 18 percent of the building stock, 25 percent of the population and 36 percent of the county's socially vulnerable populations. The areas of social vulnerability in relation to the fog hazard in Lexington County are shown in Figure 2-16.

Fog has the potential to pose a risk to the population and can create dangerous situations for public health and safety officials. Impacts to Lexington County can include:

Figure 2-16: Vulnerability to Fog in Lexington County

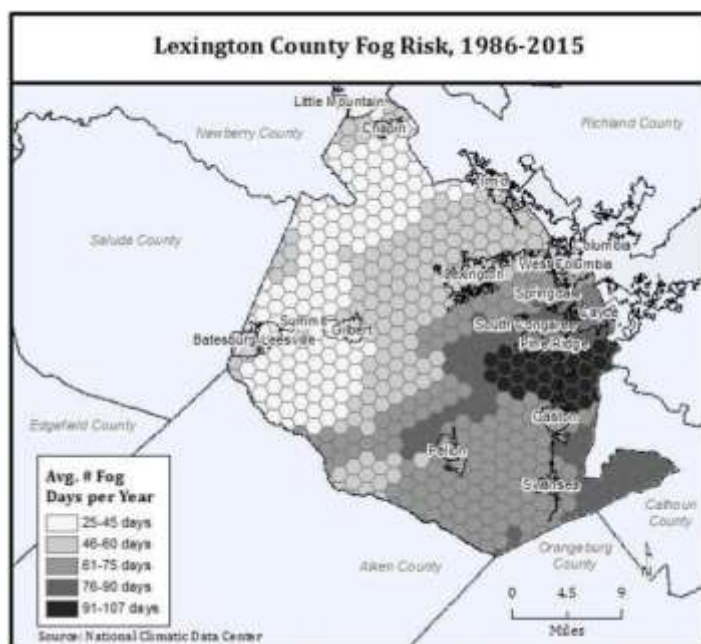

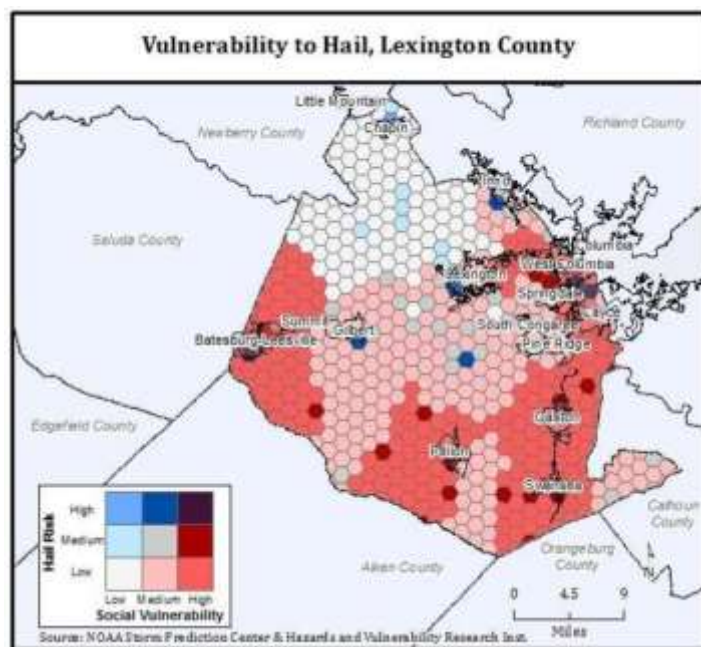

Figure 2-15: Areas of Fog Risk in Lexington County

¹¹ Britannica.com, Science, Fog, <https://www.britannica.com/science/fog>

¹² Federal Highway Administration, Road Weather Management Program, Low Visibility, https://ops.fhwa.dot.gov/weather/weather_events/low_visibility.htm

•

Limited visibility can lead to traffic accidents in the county resulting in injuries and deaths.

- Because of the limited visibility, first responder agencies may be hindered or delayed in response to calls for assistance.
- Traffic accidents can cause traffic jams and delays in shipping goods and services to local businesses and government offices.
- Traffic accidents can result in damage to roads and bridges and other transportation infrastructure which can hinder travel in the region of the accident.
- Traffic accidents can result in hazardous materials spills which can harm the environment and put first responders in harms ways working to contain and clean up the spill.

The financial and economic recovery of the county following an incident involving fog will vary based upon the scope of the incident, the amount of damage created and the ability of the county and cities to make repairs and restore essential functions and community lifelines. Also, the speed of recovery can also depend on the amount of planning and preparation taken prior to the incident.

A summary assessment of fog hazard vulnerability and impacts to community lifelines is presented in Table 2-17.

Table 2-17: Fog Vulnerabilities and Consequences to Community Lifelines

Fog	Vulnerability	Consequence
Safety and Security	Low Vulnerability	Low Impact to Lifeline/Services
Food, Water, Sheltering	Low Vulnerability	Low Impact to Lifeline/Services
Communications	Low Vulnerability	Low Impact to Lifeline/Services
Transportation	Moderate Vulnerability	Low Impact to Lifeline/Services
Health and Medical	Low Vulnerability	Low Impact to Lifeline/Services
Hazardous Material	Moderate Vulnerability	Low Impact to Lifeline/Services
Energy (Power and Fuel)	Low Vulnerability	Low Impact to Lifeline/Services

2.15 Temperature Extremes

Extreme cold temperatures are temperatures that fall below the freezing point. Extreme heat are temperatures are temperatures that reach or rise above 95 degrees. Lexington County experiences both extreme cold and hot conditions each year.

Extreme Cold

Lexington County experiences between 41 to 50 days a year when temperatures fall below freezing any given time in a 24-hour period. The coldest temperature in a 24-hour period is typically in the overnight hours. The county averages about 13 to 19 days per year of extremely cold temperatures. Lexington County has had 31 incidents of extremely cold temperatures that resulted in property damage. Total losses from these incidents totaled \$7,732,324. There has also been one fatality from an extreme cold temperature incident.

The entire county is susceptible to extreme cold temperatures; however, according to historical data, the northern portion of the county experiences the greatest number of

cold weather days with 49 to 50 days where temperatures reach below freezing

Temperatures temperatures. See Figure 2-17. On the other hand, southern Lexington County is the most vulnerable to extreme cold temperatures as measured by the number of days that remain extremely cold throughout the day. The 95th percentile calculation is used to separate out when temperatures are not extremely cold for a given location. When using the 95th percentile calculation, the southern-most part of the county has 18 to 19 extremely cold days, whereas the northern portion of the county only has 13 to 14. See Figure 2-18.

Using the 95th percentile data, the southernmost portion of the county coincides with the larger numbers of socially vulnerable

individuals in the county. In the high-risk area for extreme cold temperatures is 13% of the critical infrastructure for the county, 6

percent of the building stock, 12 percent of the population (or 32,789 people) and 27

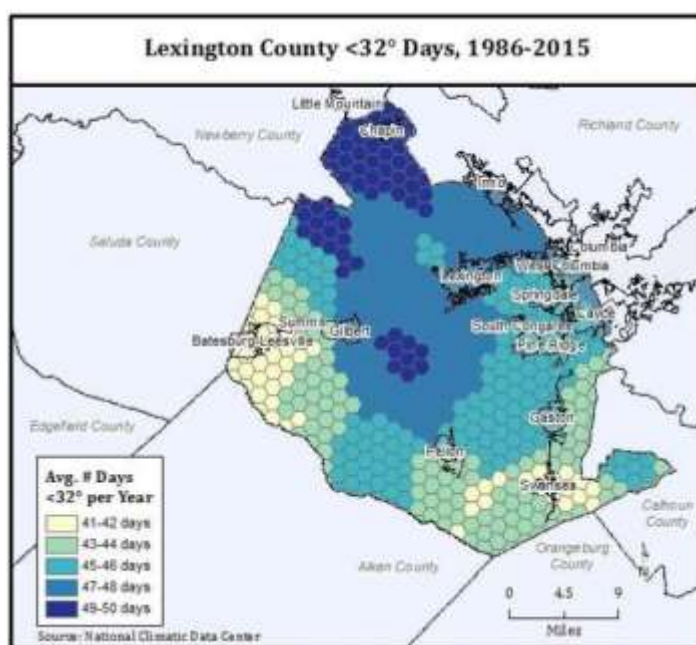

Figure 2-17: Average # of Days with <32 Degree

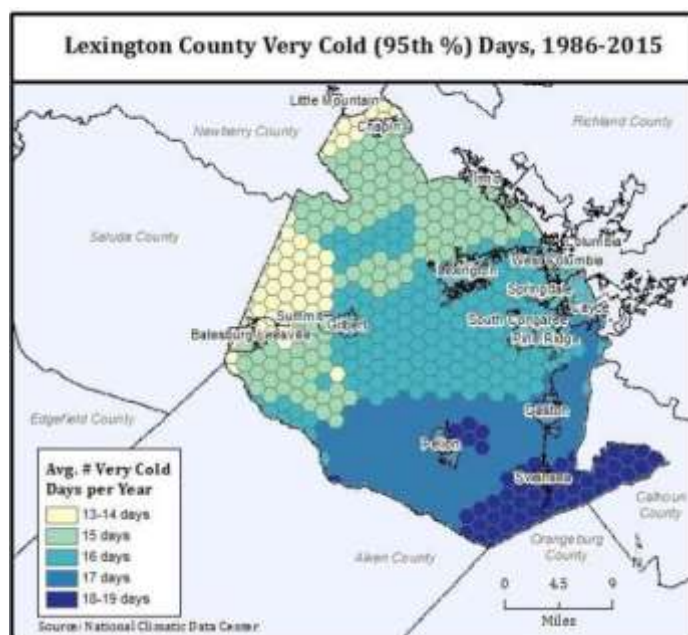

Figure 2-18: Average # of Very Cold (95th %) Days

percent of the socially vulnerable population of the county. The areas of social vulnerability in relation to the extreme cold hazard in Lexington County are shown in Figure 2-19.

Extreme cold has the potential to pose a serious risk to the population and can create dangerous situations for public health and safety officials. Impacts to Lexington County can include:

- Vulnerable populations, particularly individuals who are elderly, small infants, or individuals with health issues, can face serious threats from the cold in the event of power outages including frost bite or hyperthermia.
- Individuals required to work outside may be hindered due to the cold or may suffer frost bite or hyperthermia.
- Community shelters may need to be established to house individuals

potentially exposed to hazardous

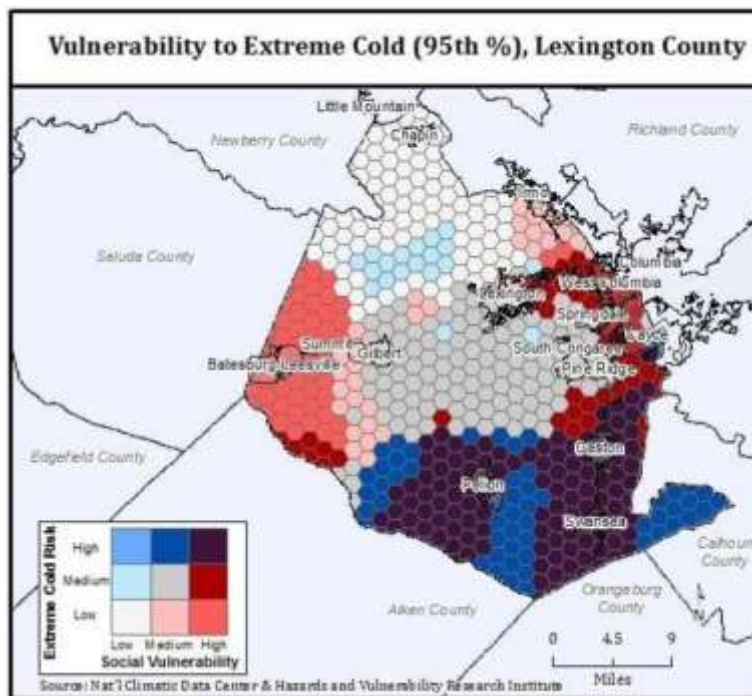

Figure 2-19: Vulnerability to Extreme Cold in Lexington

conditions including the homeless in **County** the community.

- Frozen pipes as a result of extreme cold can cause serious damage to homes as well as critical facilities.
- Repair to facilities from frozen might hinder governmental and business operations and prevent the delivery of critical services to the community.
- Extreme cold accompanied by precipitation can result in ice on roadways. Icy conditions on roadways can result in accidents, injuries and deaths.

The financial and economic recovery of the county following an incident involving extreme cold will vary based upon the scope of the incident, the amount of damage created and the ability of the county and cities to make repairs and restore essential functions and community lifelines. Also, the speed of recovery can also depend on the amount of planning and preparation taken prior to the incident.

A summary assessment of extreme cold hazard vulnerability and impacts to community lifelines is presented in Table 2-18.

Table 2-18: Extreme Cold Vulnerability and Consequence to Community Lifelines

Extreme Cold	Vulnerability	Consequence
Safety and Security	Low Vulnerability	Low Impact to Lifeline/Services
Food, Water, Sheltering	Moderate Vulnerability	Low Impact to Lifeline/Services
Communications	Low Vulnerability	Low Impact to Lifeline/Services
Transportation	Moderate Vulnerability	Low Impact to Lifeline/Services
Health and Medical	Low Vulnerability	Low Impact to Lifeline/Services
Hazardous Material	Low Vulnerability	Low Impact to Lifeline/Services
Energy (Power and Fuel)	Moderate Vulnerability	Low Impact to Lifeline/Services

Extreme Heat

Hot temperatures are typical in Lexington County during the late spring, summer and early fall months. On average there are 18 to 27 days of temperatures above 95 degrees each year. In addition, Lexington County will endure some days of temperatures over 100 degrees during the months of May, June, July, August, September, and October. Extreme heat is a public health concern due to the increased possibility of heat related illnesses among residents and workers in the county. According to the HMP there were 7 extreme heat events from 1960 to 2014 that resulted in losses of \$21,263,066. The details regarding the type of

losses is not defined in the plan nor in the National Centers for Environmental Information (NCEI) Storm Events Database.

All of Lexington County is susceptible to extreme heat. While central and southern parts of the county experience more days above 95 degrees (See Figure 2-25) it is the extreme

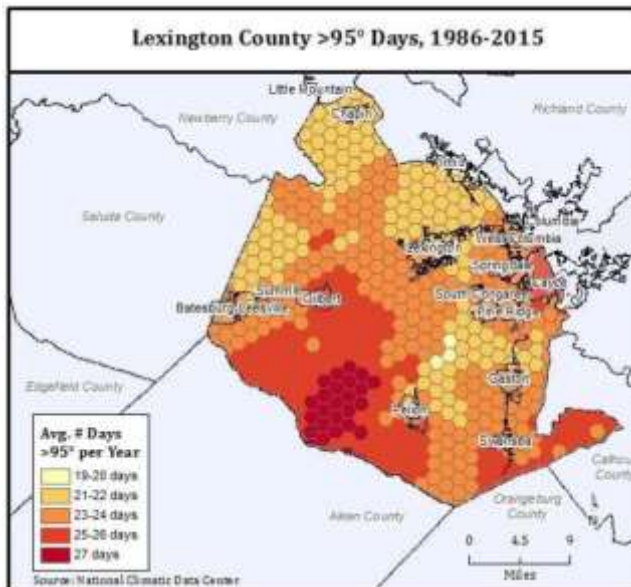

Figure 2-20: Average # of Days >95 Degrees in Lexington County

eastern portions of the county that are at most risk from temperature anomalies meaning the eastern region may experience an additional day of extreme temperatures compared to the rest of the county (See Figure 2-26). The 95th percentile calculation is used to separate out when temperatures are not extremely hot for a given location.

The southern and southwestern most portion of the county coincides with the larger numbers of socially vulnerable individuals in the county with an average of 24.3 days a year of temperatures over 95 degrees. In the high vulnerability area for extreme heat in the county there is 13% of the critical infrastructure for the county, 12 percent of the building stock, 16 percent of the population, and 23 percent of the socially vulnerable population of the county. The areas of social vulnerability in relation to the extreme heat hazard in Lexington County are shown in Figure 2-22.

Extreme heat has the potential to pose a serious risk to the population and can create dangerous situations for public health and safety officials. Impacts to Lexington County can include:

- Vulnerable populations, particularly the elderly and children under 5, can face serious or life-threatening health problems from exposure to extreme heat including hyperthermia; heat cramps; heat exhaustion; and heat stroke (or sunstroke).
- Response personnel including utility workers, public works personnel, and any other professions where individuals are required to work outside, are more subject to extreme heat related illnesses

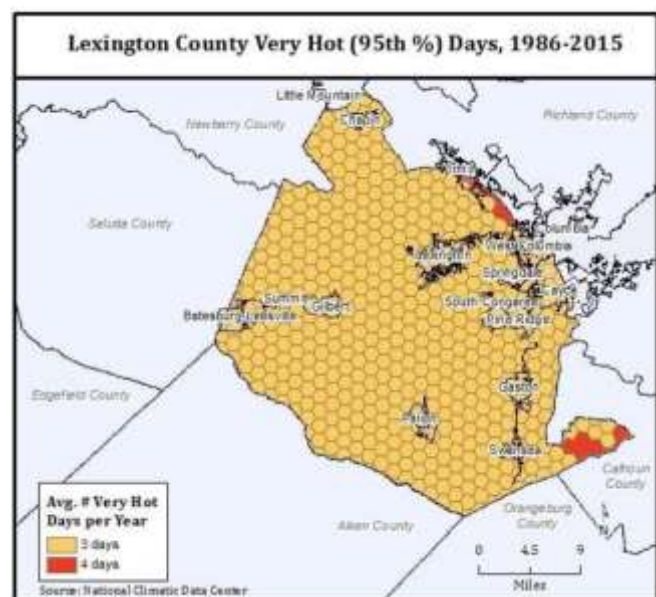

Figure 2-21: Average # of Very Hot (95th %) Days since their exposure would typically be greater.

- High energy demand periods can outpace the supply of energy, potentially creating the need for rolling brownouts, which would elevate the risk of illness to vulnerable residents.
- Highways and roads may be damaged by excessive heat causing asphalt roads to soften and concrete roads to shift or buckle.
- Vehicle engines and cooling systems typically run harder during extreme heat events, resulting in increases in mechanical failures.
- Extreme heat events during times of drought can exacerbate the environmental impacts associated

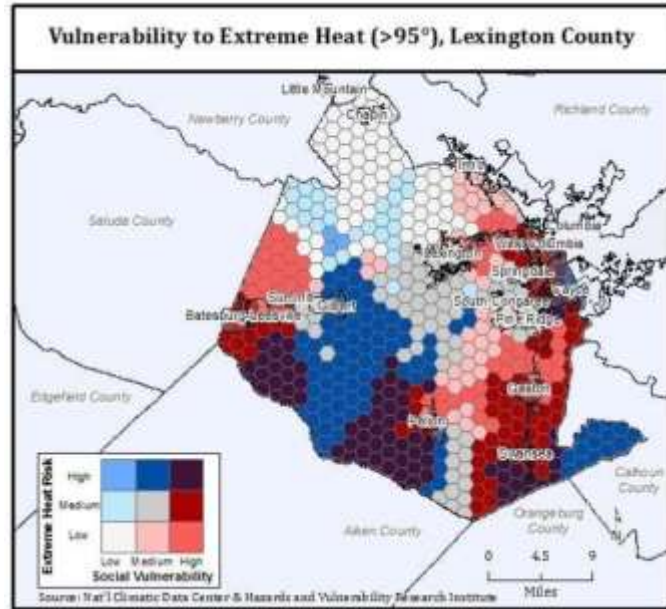

Figure 2-22: Vulnerability to Extreme Heat in Lexington County

with drought, decreasing water and air quality, and further degrading wildlife habitat.

The financial and economic recovery of the county following an incident involving extreme heat will vary based upon the scope of the incident, the amount of damage created and the ability of the county and cities to make repairs and restore essential functions and community lifelines. Also, the speed of recovery can also depend on the amount of planning and preparation taken prior to the incident.

A summary assessment of extreme heat hazard vulnerability and impacts to community lifelines is presented in Table 2-19.

Table 2-19: Extreme Heat Vulnerability and Consequences to Community Lifelines

Extreme Heat	Vulnerability	Consequence
Safety and Security	Low Vulnerability	Low Impact to Lifeline/Services
Food, Water, Sheltering	Moderate Vulnerability	Low Impact to Lifeline/Services
Communications	Low Vulnerability	Low Impact to Lifeline/Services
Transportation	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Health and Medical	Low Vulnerability	Low Impact to Lifeline/Services
Hazardous Material	Low Vulnerability	Low Impact to Lifeline/Services
Energy (Power and Fuel)	Low Vulnerability	Low Impact to Lifeline/Services

2.16 Wildfires

A wildfire, also called wildland fire, is an uncontrolled fire in a forest, grassland, brushland, or land sown to crops.¹³ Wildfires occur very frequently, about one every two days in the county. Fortunately, wildfires resulting in property damage are rare. From 1988 to 2015 there were only three fires resulting in property losses. The damage costs from those three fires were estimated at \$366,633. The number of wildfires in the county are expected to increase.

All portions of the county are susceptible to wildfires. However, the greatest risk for wildfire in the county lies in the southern portion of the county. Figure 2-23 maps the average number of acres burned per year in Lexington County.

The highest vulnerability for wildfires is in the eastern and southeastern areas of the county. In the areas of highest vulnerability are 38 percent of the county's critical infrastructure, 38 percent of the county's building stock, 42 percent of the county's population, and 38 percent of the county's socially vulnerable populations.

Wildfire has the potential to pose a serious risk to the population and can create dangerous situations for public health and safety officials. Impacts to Lexington County can include:

- Individuals in the area of the wildfire are at risk of serious injury or death from burns or smoke inhalation.
- Critical facilities may be damaged or destroyed in a wildfire

resulting in service interruptions or delays.

- Governmental offices and

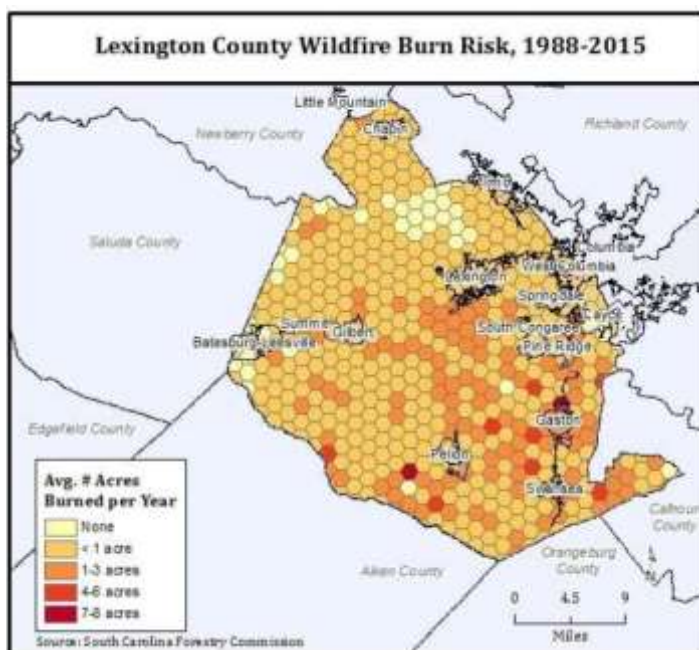

Figure 2-23: Wildfire Burn Risk in Lexington County

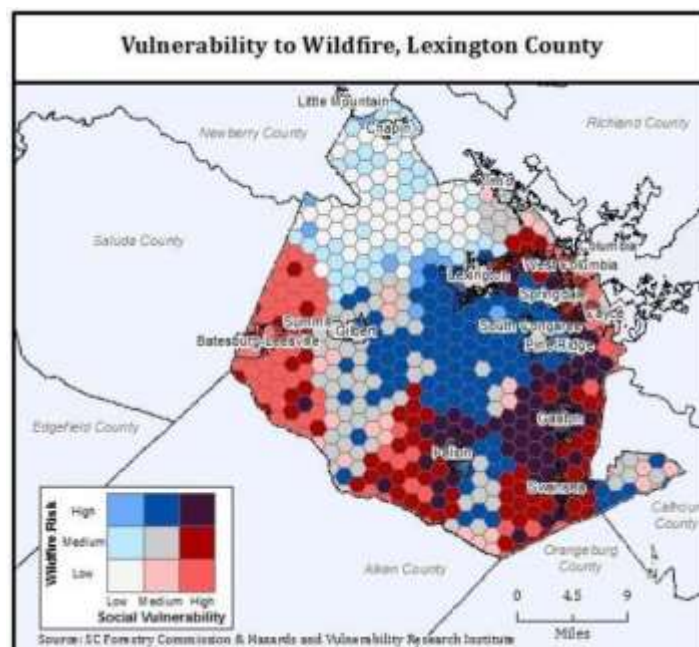

Figure 2-24: Vulnerability to Wildfire in Lexington County

businesses operations may be disrupted by the wildfire or response operations.

-
- Utility services may suffer damages or service interruptions.
 - Residents might be displaced requiring the need for temporary sheltering services as well as longer term housing solutions.
 - Smoke may affect vulnerable populations with respiratory issues.
 - Business and tourism may be disrupted due to the wildfire hindering the economic recovery of the area.
 - The potential displacement of residents and businesses may result in lost tax revenues for the communities affected.
 - The loss of trees and groundcover on sloped areas might increase the opportunity for mudflows during storms.
 - The substantial costs associated with wildfire response and recovery can exhaust the financial resources of the affected communities.
 - Roadways and bridges may suffer damage or be closed due to wildfire response and recovery activities.
 - First responders may suffer injuries, death, or long-term illnesses from fire-fighting efforts.

The financial and economic recovery of the county following an incident involving wildfire will vary based upon the scope of the incident, the amount of damage created and the ability of the county and cities to make repairs and restore essential functions and community lifelines. Also, the speed of recovery can also depend on the amount of planning and preparation taken prior to the incident.

A summary assessment of wildfire hazard vulnerability and impacts to community lifelines is presented in Table 2-20

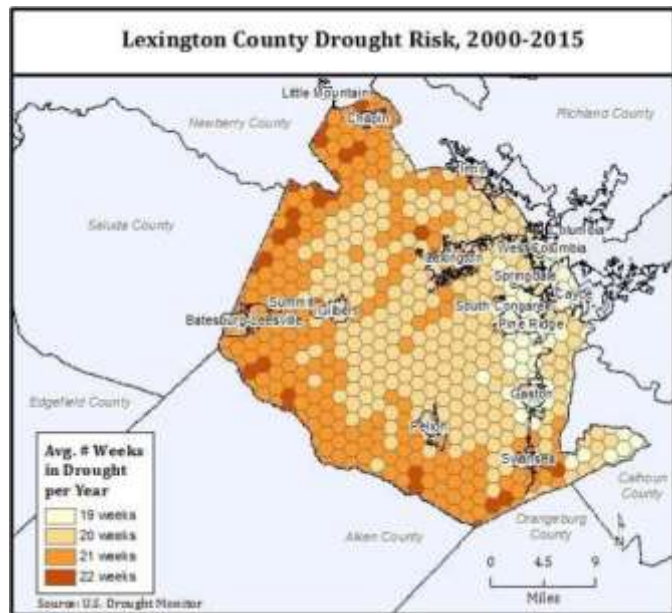

Table 2-20: Wildfire Vulnerability and Consequence to Community Lifelines

Wildfires	Vulnerability	Consequence
Safety and Security	Low Vulnerability	Moderate Impact to Lifeline/Services
Food, Water, Sheltering	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Communications	Low Vulnerability	High Impact to Lifeline/Services
Transportation	Low Vulnerability	High Impact to Lifeline/Services
Health and Medical	Low Vulnerability	Moderate Impact to Lifeline/Services
Hazardous Material	Low Vulnerability	Moderate Impact to Lifeline/Services
Energy (Power and Fuel)	Moderate Vulnerability	Moderate Impact to Lifeline/Services

2.17 Drought

Drought is a deficiency in precipitation over an extended period, usually a season or more, resulting in a water shortage causing adverse impacts on vegetation, animals, and/or people.

¹⁴ According to the Palmer Drought Severity Index, Lexington County has drought conditions on average 5 to 6 months a year. Between 1960 to 2014, Lexington County has experienced 17 drought incidents with total losses of \$24,345,64 including crop damages of \$14,696,052. It is suspected that the losses associated with drought are understated and may possibly exceed \$100 million. Particularly damaging droughts occurred in the county in 1954, 1986, and from 1998 to 2002. Less severe droughts occurred in 1988, 1990, 1993, and 1995.

All portions of the county are susceptible to drought; however, the western half of Lexington County experiences more weeks of Lexington County drought conditions than other portions of the county. Figure 2-25 illustrates the average number of weeks in drought per year in Lexington County.

The western and southern portions of the county are the most vulnerable to droughts as these areas see more than 20.7 weeks of drought per year and the socially vulnerable populations that reside in these areas. In the areas of highest vulnerability for drought are 22 percent of the county's critical infrastructure, 20 percent of the building stock, 17 percent of the county's population, and 14 percent of the county socially vulnerable populations. Figure 2-26 shows the areas of Lexington County that have social vulnerability to drought.

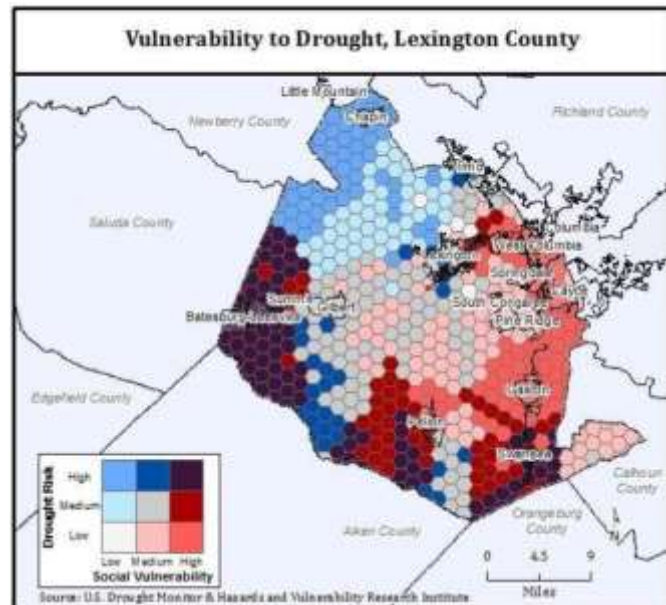

Figure 2-26: Vulnerability to Drought in Lexington County

Drought has the potential to impact to the county as a result of diminishing water supplies and cascading effects. Impacts to Lexington County can include:

¹⁴ National Weather Service, Drought Public Fact Sheet.

<https://www.esrl.noaa.gov/gmd/obop/mlo/educationcenter/students/brochures%20and%20diagrams/noaa%20publications/Drought%20Fact%20Sheet.pdf>

-
- Water shortages may trigger the need for water rationing in affected communities.
 - Law enforcement may have to take measures to enforce water rationing directives.
 - A severe water shortage may result in an inadequate supply for human needs.
 - Reduced water pressure may result in reduced water quality requiring boil water or other notices be communicated to the public.
 - Utility companies will see reduced revenues in the event reduced consumption directives are directed to the public and businesses.
 - An extended drought can lead to an increase in wildfires.
 - Firefighters may have reduced resources for fighting wildfires and other fire suppression activities.
 - As water sources dry up in forested areas, wildlife may enter developed area looking for water and food.
 - Hydroelectric facilities could have decreased power generating capabilities.
 - Trees can become stressed and eventually die causing a hazard to the public from falling limbs and trees.
 - Affected communities may face increased costs by having to transport water into water shortage areas.
 - Agriculture can suffer loss of crops where other irrigation methods are not possible.
 - Drought may limit livestock grazing areas resulting in decreased livestock weight as well as potential illness and death.
 - Farms may incur increased costs of feed and may need to transport water for livestock and irrigation.

The financial and economic recovery of the county following an incident involving drought will vary based upon the scope of the incident, the amount of damage created and the ability of the county and cities to maintain essential functions and community lifelines. Also, the speed of recovery can also depend on the amount of planning and preparation taken prior to the incident.

A summary assessment of extreme heat hazard vulnerability and impacts to community lifelines is presented in Table 2-21.

Table 2-21: Drought Vulnerability and Consequence to Community Lifelines

Drought	Vulnerability	Consequence
Safety and Security	High Vulnerability	Low Impact to Lifeline/Services
Food, Water, Sheltering	High Vulnerability	Low Impact to Lifeline/Services
Communications	Low Vulnerability	Low Impact to Lifeline/Services
Transportation	Low Vulnerability	Low Impact to Lifeline/Services
Health and Medical	Moderate Vulnerability	Low Impact to Lifeline/Services
Hazardous Material	Low Vulnerability	Low Impact to Lifeline/Services
Energy (Power and Fuel)	High Vulnerability	Low Impact to Lifeline/Services

2.18 Earthquake

An earthquake is the shaking of the surface of the Earth resulting from a sudden release of energy in the Earth's lithosphere that creates seismic waves. Earthquakes are measured by moment magnitude. Moment magnitude (M_w) is derived by analyzing all the waveforms recorded from the shaking. Table 2-22 provides the moment magnitude scale currently used to measure the size of an earthquake.¹⁵

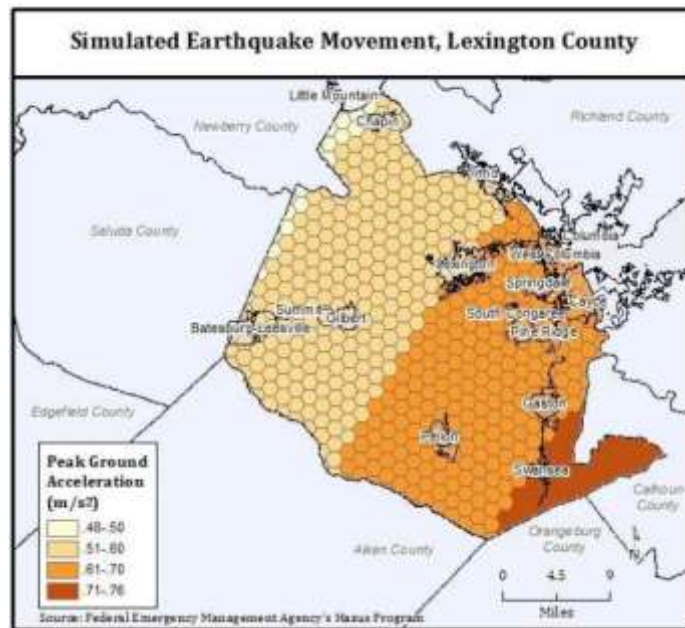

Table 2-22: Earthquake Measurement Scale

Magnitude Class	Measurement	Damage
Microearthquake	<3	Little to none
Minor earthquake	3.0 - 3.9	Little to none
Light earthquake	4.0 - 4.9	Moderate
Moderate earthquake	5.0 - 5.9	Considerable
Strong earthquake	6.0 - 6.9	Severe
Major earthquake	7.0 - 7.9	Widespread, heavy
Great earthquake	8.0 and up	Tremendous

In Lexington County, no earthquakes have occurred since 1900. There is only a 2 percent chance of a microearthquake occurring with a magnitude of 1.5 to 2. The worst-case scenario, according to the South Carolina Geological Survey would be a 6.8 magnitude earthquake such as the Charleston Earthquake that occurred in 1886. Should this happen approximately 90 percent of buildings would remain undamaged, about 3,100 buildings (3 percent of the county building stock) would be moderately damaged with an estimated property damage value of \$226 million. Most of the damaged structures would be residential and would occur in central and western Lexington County.¹⁶ Figure 2-27 shows the peak ground acceleration from a modeled 6.8 magnitude earthquake.

While all areas of the county are susceptible to the effects of an earthquake, it is the southeast portion of the county that has the highest vulnerability. In that area of the county is infrastructure, only 1 percent of the

building stock, 2 percent of the population,

5 percent of the critical

Figure 2-27: Simulated Earthquake Movement in

¹⁵ How Earthquakes Are Measured, CNN.com, <https://edition.cnn.com/2015/04/25/tech/measuringearthquakes/index.html>

¹⁶ SCGS, Projected Earthquake Intensities for South Carolina, Educational Series #7a. Available at <http://www.dnr.sc.gov/geology/images/Equake%20intens1-pg.pdf>

Lexington County

and 4 percent of socially vulnerable populations. Figure 2-28 shows the areas of social vulnerability to an earthquake in Lexington County.

An earthquake has the potential to pose a serious risk to the population and can create dangerous situations for public health and safety officials. Impacts to Lexington County can include:

- Individuals can be injured or killed from falling debris or collapsed structures.
- Homes can be damaged or destroyed in an earthquake necessitating the need for temporary and permanent housing solutions.
- Roads and bridges can sustain severe damage as a result of an earthquake hindering

transportation throughout affected parts of the county.

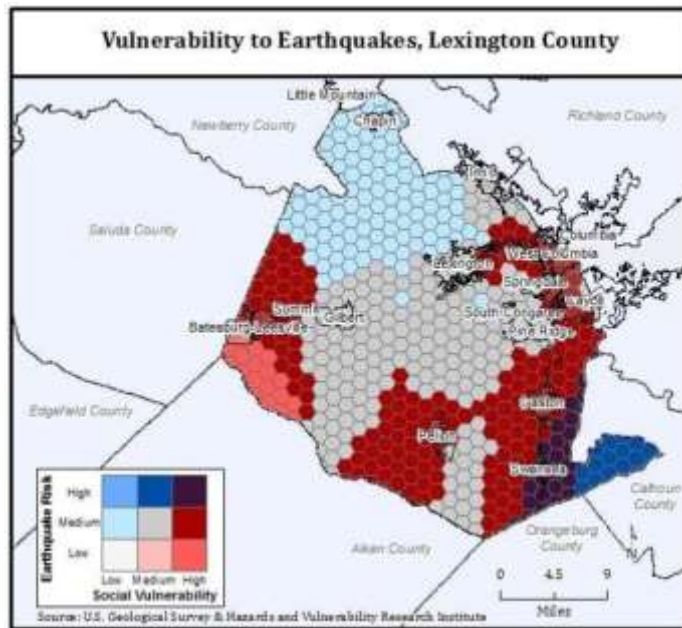

Figure 2-28: Vulnerability to Earthquakes in Lexington County

- Pipelines can rupture and hazardous materials can spill or be released resulting in potentially dangerous conditions for nearby residents and responders.
- Transportation accidents from motor vehicles and/or trains could occur resulting in injuries, deaths, and hazardous materials spills.
- Utilities can suffer damages resulting in power, water and natural gas outages to affected communities.
- Businesses providing critical services may be impacted and may therefore be unable to provide critical services to the communities and agencies they serve.
- Repairing and rebuilding can take an extending period of time impacting the economic well-being of affected communities.
- Older structures may suffer more serious impacts from an earthquake as they may not be constructed to the same standards as newer structures.
- Loss of power can lead to house fires as residents use candles to provide light or light fires to keep warm.

- Recovery of community lifelines may be delayed as damages to critical facilities are being repaired.

The financial and economic recovery of the county following an incident involving an earthquake will vary based upon the scope of the incident, the amount of damage created and the ability of the county and cities to make repairs and restore essential functions and community lifelines. Also, the speed of recovery can also depend on the amount of planning and preparation taken prior to the incident.

A summary assessment of earthquake hazard vulnerability and impacts to community lifelines is presented in Table 2-23.

Table 2-23: Earthquake Vulnerability and Consequence to Community Lifelines

Earthquake	Vulnerability	Consequence
Safety and Security	Low Vulnerability	Low Impact to Lifeline/Services
Food, Water, Sheltering	High Vulnerability	High Impact to Lifeline/Services
Communications	Low Vulnerability	Low Impact to Lifeline/Services
Transportation	Moderate Vulnerability	High Impact to Lifeline/Services
Health and Medical	Low Vulnerability	Moderate Impact to Lifeline/Services
Hazardous Material	Moderate Vulnerability	Moderate Impact to Lifeline/Services
Energy (Power and Fuel)	Moderate Vulnerability	Moderate Impact to Lifeline/Services

2.19 Assessment Summary

To summarize the data from the assessment, each of the hazards reviewed was given a score based upon its vulnerability and consequence to community lifelines as included in the Vulnerability and Consequence to Community Lifelines table included at the end of each hazard section (2.5 thru 2.17). A low categorization is equal to a 1 score. A moderate characterization is equal to a 2 score, and a high characterization is equal to a 3 score. By totaling the scores together among the vulnerability and consequence columns, a vulnerability and consequence community lifeline score can be derived for each hazard. In Table 2-24, the scores are provided for the vulnerability and consequence to community lifelines for each hazard.

Table 2-24: Vulnerability and Consequence to Community Lifelines Scores for All Hazards

Hazard	Vulnerability and Consequence to Community Lifelines
Winter Snow and Ice Storms	33
Hurricane and Tropical Storms	32
Flood	30
Tornado	30
Wildfire	28
Earthquake	26
Thunderstorm	25
Wind	25
Lightning	24
Hail	22
Drought	21
Extreme Temperatures	17
Fog	16

In scoring each hazard regarding its vulnerability and consequence to community lifelines, those hazards which pose the highest threat to community lifelines and vulnerable populations can be determined. For Lexington County, the hazards that pose the highest threat to community lifelines and vulnerable populations are winter snow and ice storms, hurricane and tropical storms, flood and tornado. These are followed by wildfire, earthquake, thunderstorm, wind (thunderstorm and wind score evenly), lightning, hail, drought, extreme temperatures, and fog.

One of the most critical findings from this assessment is that many of the hazards that pose the highest threats to community lifelines and vulnerable populations result in flooding. Hurricane/tropical storm, flood and thunderstorm can result in heavy rains and flooding. This was a critical finding since it aligned with the same impacts suffered by the County for which its initial CDBG-DR allocation was awarded. This echoes the concerns that were communicated by the County's Emergency Management Department, Community Development Department and Public Works. This critical finding helped provide guidance in the identification, development and selection of CDBG-MIT activities.

3. Allocation of Funds

3.1 Mitigation Goals

Another component of the assessment of the County's HMP was to record mitigation goals identified as part of the HMP. This was critical during project development and consideration since the County wanted to ensure that any potential projects for consideration would actually address a mitigation goal established under the HMP. The following goals and objectives were included in the HMP purposefully to "help guide planners in making decisions that safeguard the life and property of Lexington County citizens":

1. Develop better data for the community relating to type, impact, location and cost of the natural disaster mitigation strategies occurring in the area.
2. Increase the community's capacity to initiate and sustain emergency response operations during and after a natural disaster, thereby mitigating effects of hazardous events.
3. Enhance existing, or design new, policies and/or programs in the community to reduce the potential damaging effects of hazards without hindering other community goals or impeding hazard mitigation programming in the county.
4. Protect the most vulnerable populations, buildings and critical facilities in the County through the implementation of cost-effective, environmentally sound, and technically feasible mitigation projects.
5. Protect the public health, safety and welfare by increasing public awareness and understanding of hazards and by fostering both individual and public responsibility in the mitigation of risks through available techniques that minimize vulnerability to those hazards.
6. Increase understanding of all residents in the community about the natural hazards threatening local areas and techniques available to minimize vulnerability to those hazards.
7. Maintain the economic vitality of the community in the face of natural disasters.
8. Ensure the security of homes, institutions and places of employment throughout the community that are considered vulnerable to natural disasters.
9. Ensure that the availability and function of community infrastructure will not be significantly disrupted by a natural disaster.
10. Inventory, map and assess all flood plain structures and properties that are or may be repetitive loss properties."

Each project included in this Action Plan addresses and meets at least one of the goals and objectives listed above.

3.2 Review of Local and Regional Planning Material

In addition to reviewing the regional HMP applicable to Lexington County, the *All-Hazard Risk Assessment and Hazard Mitigation Plan for the Central Midlands Region of South Carolina* (HMP) 2016, the County also reviewed other local and regional planning materials to ensure conformity and consistency among documents.

South Carolina HMP and State of Dams Report

Lexington County reviewed both the State's Hazard Mitigation Plan and DHEC's State of the Dams report. The County reviewed the State's goals and mitigation activities identified in the HMP as available online at:

<https://scemd.org/em-professionals/plans/hazard-mitigation-plan/>

Many of the State's initiatives and goals far exceed the capabilities of the County. While there are many potential projects and plans that may be relevant to hazards and mitigation needs identified in the County, most either did not address the County's greatest hazard mitigation needs, exceeded the financial capabilities of the County, required utilization and coordination of properties outside of County's control or could not be designed or implemented in a manner that met HUD regulatory requirements (LMI

National Objective). The County did send this Action Plan to the State Hazard Mitigation Officer for review but did not receive any comments back regarding the document.

Lexington County also reviewed DHEC's State of the Dams report regarding potential impacts from dam failures. While the County considered attempting to engage in projects which may address dam failure hazards a variety of obstacles made it difficult and risky to undertake such activities. These included the fact that many of the dam failure issues are already being addressed according to the DHEC report. Additionally, many dams are privately owned which creates eligibility difficulty or are the responsibility of the state. Once again many of the regions that are prone to dam failure hazards are not in LMI qualified areas which makes meeting a National Objective difficult. Project coordination, complexity, eligibility and a variety of other issues unfortunately forced the County to consider other hazard mitigation projects.

City of Columbia and Richland County CDBG-DR Action Plans

The disaster events that led to Lexington County's CDBG-DR and resulting CDBG-MIT awards were the same events which impacted the state capital of Columbia and the neighboring county of Richland. Both lie just to the east of Lexington County and were required to develop Action Plans as part of their CDBGDR and CDBG-MIT award allocations. In preparation and development of this Action Plan Lexington County not only reviewed those Action Plans but consulted with both the City of Columbia and Richland County to ensure that projects did not conflict with other local planning efforts and aligned with local recovery and mitigation objectives. Many of Lexington's projects are similar to other recovery and mitigation projects being undertaken locally. Review of those plans and discussions with Columbia and Richland assured Lexington that the Action Plan was promoting other recovery and mitigation planning efforts being undertaken by local governments.

3.3 Basis for Funding Allocation Process

This section describes how the findings of the mitigation needs assessment informed development of mitigation programs and projects and the allocations of funding. Lexington County's initial analysis indicates unmet need in all three core recovery categories of housing, infrastructure, and economic development. The starting point in the basis for the allocation of the CDBG-MIT funds began with the allocation of 5% of the total funds for administrative costs associated with the funding allocation. This is the maximum amount permitted for administration expenses. Additionally, funds have been provided under Planning to address all eligible planning related costs as defined by HUD. This includes such items as costs related to environmental work, Action Plan development and maintenance and other program associated planning costs.

As was described in the Mitigation Needs Assessment, two of the highest scoring hazards, Hurricane/Tropical Storm and Flood both result in flood related impacts. All of the County's current disaster recovery funding including HUD, FEMA and SBA funding are provided as a result of flood related disasters. Flood related disasters have been the most consistent and impactful threat to the County over the last 30 years and are projected to continue to be a significant threat if not the most significant hazard threat in the future. Despite heavy rains occurring as part of larger weather systems such as hurricanes, impacts from winds were not found to be nearly as substantial or impactful as flood inundation. Even under the County's Minor Housing Rehabilitation Program funded with the County's CDBG-DR allocation, the primary source of recorded impacts were flood related damages as opposed to those caused by wind. Based on this information the County prioritized reviewing and considering projects that mitigate impacts from flood related hazards. The County considered potential projects to mitigate impacts from high winds but due to the extensive need to address flood related issues as identified in the Hazard Mitigation Needs

Analysis and supported with evidence from the CDBG-DR program the County is not pursuing any projects related to the mitigation of the impacts from wind. Lexington County is not a coastal County and lies over 100 miles from the coast. While the County recognizes the significance of sea level rise, the County is not susceptible to the direct impacts of sea level rise for the foreseeable future and therefore did not consider and is not undertaking projects which mitigate the impacts from sea level rise.

The County's existing buyout program, utilizing CDBG-DR funding, has been successful in permanently removing people and property from flood hazard areas. These are also the types of hazards which have resulted in significant impacts, damages and financial loss for the County in recent years. Additionally, the language in the Federal Register and its associated waivers strongly supported a buyout program which aligned with the County's mitigation goals and objectives while addressing mitigation needs from one of the County's most substantial hazards, flooding. The County conducted an analysis of its existing buyout program to identify the capacity to continue the program, establish appropriate caps and to approximate the number of properties which may be involved in continuing the program. The buyout program also meets two of the County's mitigation goals which include:

- Ensure the security of homes, institutions and places of employment throughout the community that are considered vulnerable to natural disasters.
- Enhance existing, or design new, policies and/or programs in the community to reduce the potential damaging effects of hazards without hindering other community goals or impeding hazard mitigation programming in the county.

As the County departments worked together to identify potential projects based on mitigation needs the ongoing impacts to infrastructure, particularly roads, arose as a continuous issue. The County continues to seek ways to mitigate impacts to infrastructure from flooding which it began to address using CDBG-DR funds. Impacts from flooding not only hinder transportation in the County during heavy rain events due to roadway flooding but also results in significant damages to roadways and can leave residents isolated as roads become impassable. Therefore, the County identified those block groups which were LMI qualified and then reviewed impacts within each of those block groups to identify roads which were impacted and possibly contributed to flooding issues. Flooded roads and those lacking adequate stormwater management systems were prioritized for improvements. This included prioritizing unpaved roads which contribute to a variety of issues during heavy rain events as roads get washed out, suffer severe erosion, become impassable and deposit sediment along other paved roads hindering mobility on those roads as well. Improving these roadways will not only help mitigate impacts from flooding but also aligns with the following goals identified in the HMP:

- Ensure that the availability and function of community infrastructure will not be significantly disrupted by a natural disaster.
- Increase the community's capacity to initiate and sustain emergency response operations during and after a natural disaster, thereby mitigating effects of hazardous events.

These projects also align with the State's HMP objective of identifying and addressing road drainage issues and its dedication to ensuring that evacuation routes remain accessible. These were identified among the State's HMP goals as described in the State's HMP documents located here:

<https://scemd.org/em-professionals/plans/hazard-mitigation-plan/>

Addressing the previously identified priority projects listed above absorbed much of the County's allocated CDBG-MIT funding. Due to limited CDBG-MIT funds and restrictions of the CDBG-MIT project

eligibility criteria many of the County's other anticipated projects could not be undertaken though many were considered.

Summary

In order to continue to address the needs being served by the Buyout Program the County sought to allocate funds to assist in finalizing the acquisition of several properties originally identified under the CDBG-DR Buyout Program. These funds had to be allocated under the Urgent Need National Objective since they did not provide LMI benefit. The remaining funds, therefore, were prioritized to benefit LMI populations. Projects then had to be evaluated to meet this LMI eligibility criteria. Projects and project locations were then identified based upon their ability to meet the LMI National Objective which helped lead to the final determination of specific projects.

Disaster Mitigation Program Planning

The County will utilize CDBG-MIT funds for eligible planning activities required for program development and implementation such as Action Plan development and maintenance, environmental review or studies and citizen participation requirements. Funds may also be utilized to conduct any special studies needed for project development or for mitigation related planning activities such as resilience or recovery plan development. Planning and Administration allocations are based on the best data currently available. It can be anticipated that, as programs are implemented and actual needs are determined, these allocations may be adjusted accordingly. Planning funds were originally intended to provide \$10,000 towards the development of the County's new Hazard Mitigation Plan to be completed by the Central Midlands Council of Governments. These funds were ultimately not required to help pay for the HMP and will be used to cover other related planning costs. The new HMP will still be developed through the provision of other funding sources. The County previously transferred \$740,000 in unused Home Buyout Program funds into Planning to help cover anticipated future Planning Costs.

Lexington County procured the services of a technical service provider to assist in the development of the Action Plan and to assist in implementation of CDBG-MIT activities. This includes assistance with management, technical assistance and compliance of CDBG-MIT funds, such as environmental review activities. The County of Lexington will directly manage all Administrative Activities utilizing Community Development Department staff and the technical service provider.

Disaster Mitigation Program Administration

Proper administration of the CDBG-MIT grant will support the delivery of programs in the areas of financial management, procurement, information management and quality assurance and technical assistance. The County must provide administrative and support services necessary to formulate, implement, and evaluate the County's CDBG-MIT programs. These overall grant management activities include preparing and amending the CDBG-MIT Action Plan; ensuring the public is aware of and understands the Plan; developing program policies and procedures; monitoring program expenditures; ensuring compliance with all requirements; and creating reporting functionality on Recovery websites, etc. The County anticipates utilizing 5%, \$759,250, of the CDBG-MIT allocation for administrative purposes. Please note that the Planning and Administration allocations are based on the best data currently available. It can be anticipated that, as programs are implemented and actual needs are determined, these allocations may be adjusted accordingly.

As of November 2016, the County had hired a CDBG-DR Administrator, as a temporary grant-funded employee, to serve as the leader of the day-to-day activities of the administrative team. This individual will also act as the Administrator for CDBG-MIT funded activities. Just as with CDBG-DR they will serve to coordinate the activities of the contractors that will be hired to manage the activities of the individual

programs. Additionally, the County has employed and will continue to employ a consulting company whose primary functions will be to provide Technical Assistance to the county and to other contractors and to assist in the Quality Assurance function as it relates to gathering and storing accurate, appropriate documentation of the overall program and the individual programs. The Quality Assurance/Technical Assistance team leader and the CDBG-MIT Grant Manager will work closely in seeing that all CDBG-MIT rules and regulations, as well as spending and procurement activity, are accomplished according to appropriate standards.

Both the CDBG-MIT Grant Manager and the Quality Assurance/Technical Assistance team leader will report to the County of Lexington Grants Manager and Community Development Director. The Community Development Director will remain the chief administrator for the Disaster Mitigation Effort.

County staff, including the Community Development Director and the CDBG-MIT Grant Manager, will directly oversee and manage all administrative efforts related to CDBG-MIT activities.

3.4 Housing Programs

Disaster Mitigation Buyout Program Program

Description:

As part of its disaster mitigation strategy, the County will implement identified mitigation activities that will reduce impacts of future storms on properties while increasing safety by maintaining the acquired properties' undeveloped space for recreation or stormwater management purposes. To accomplish this, CDBG-MIT funds will be used to purchase twenty-six properties within the floodplain. The County intends to attempt to address 26 remaining properties from the CDBG-DR funded buyout program. Since these potential applicants need to be notified of the program and must reapply for CDBG-MIT funds their level of participation is uncertain and therefore have not been identified at this time for privacy purposes. The County is hopeful that continuation and participation in the buyout program will help reduce potential "checkerboarding" effects from the buyout program. Applicants will be offered the current appraised value of the property.

Similar to the CDBG-DR Housing Buy-Outs program the CDBG-MIT Buyout Program offers several incentives for both owner and renter occupied units.

Owner Occupied

All eligible applicants of owner-occupied units will be provided with an additional \$15,000 as a housing incentive for participation in the buyout program. To ensure that families will have adequate opportunity to purchase safe and affordable housing within the County, households who complete a buy-out transaction for their primary residence will be offered an additional \$10,000 towards the purchase of a new home if it is located within Lexington County. The new home must serve as the owner's primary residence AND the new home must have been purchased between October 5, 2015 and up to 6 months after the original home was bought by the County.

Renter Occupied

All eligible applicants of renter-occupied units will also be provided with an additional \$15,000 as a housing incentive for participation in the buyout program. The property owner is also eligible to

receive a relocation incentive of \$10,000 towards the purchase of a new Lexington County property to be utilized for residential rental housing. This is being provided to help ensure the preservation of much needed rental units within the County. In order to receive the relocation incentive the new home must be rented to an LMI qualified household and must have been purchased between October 5, 2015 and up to 6 months after the original home was bought by the County.

If the property being acquired by the County is occupied by renters, the displaced renters will receive either \$5,000 in relocation assistance or full Uniform Relocation Assistance (URA) compensation amount, whichever is greater.

Once the County obtains ownership of these properties any existing structures will be demolished and all debris removed from the site. The County intends to remove any electrical, water and sewer utilities from the site and cap them at the road. This may change due to budget issues such as unanticipated demolition costs, increased costs of acquisition, etc. The County will utilize funds to address any impacts to infrastructure which may occur during demolition and site clearance. Any funds used to address impacts to infrastructure will be limited to the purchase of materials needed to address the issue, labor will be provided by County staff. The details of the program will be defined in the programmatic policies and procedures document to be developed once HUD approves this Action Plan. The County will then grade the site as needed and either plant grass or local vegetation so that the lot does not remain as vacant dirt lot. The lot will be maintained by the County, in perpetuity, for use in accordance with section V.B.4 of the Notice.

The County does not anticipate expanding the program beyond the 26 potential properties remaining from the CDBG-DR program. Any funds that aren't used under this program will be reallocated to another project or assigned to a new CDBG-MIT eligible project to be submitted to HUD for review and to be included in the Action Plan under a substantial amendment.

Table 3-1: Buyout Program Incentives Summary for Property Owners

	Owner Occupied	Owners of Renter Occupied Homes
Purchase Price	Current Fair Market Value	Current Fair Market Value
Participation Incentive	\$15,000	\$15,000
Local Relocation Incentive	<p>\$10,000 for home purchased in Lexington</p> <ul style="list-style-type: none"> i. The new property must be located in Lexington County. ii. The property must have been purchased between October 5th, 2015 and up to 6 months after the home was bought by the County. iii. Proof of ownership must be provided. iv. The property must be the applicant's primary place of residence. v. The property is NOT located in the Special Flood Hazard Area as designated by FEMA 	<p>\$10,000 for property purchased in Lexington with documentation of LMI tenant.</p> <ul style="list-style-type: none"> i. <i>The new property must be located in Lexington County.</i> ii. <i>The property must have been-purchased between October 5th, 2015 and up to 6 months after the home was bought by the County.</i> iii. <i>Proof of ownership must be provided.</i> iv. <i>The property must contain at least one unit which functions solely as a residential rental unit.</i> v. <i>The property is NOT located in the Special Flood Hazard Area as designated by FEMA.</i> vi. <i>They applicant must provide a copy of an executed lease agreement with their tenant(s) for the subject property for a term of no less than 12 months term.</i> vii. <i>The rent charged cannot exceed HOME high rents adjusted for number of bedrooms in the unit, as published by HUD, for the first 12-month lease period.</i> viii. <i>The initial renter/tenant must provide adequate income verification documentation, as described in the P&P, confirming the renter household has an income at or below 80% of the AMI. This requirement only applies to the initial renter/tenant household.</i>

Program Budget:

The total program budget for this activity is **\$5,240,000**. This allocation may be increased or decreased with an amendment to the Action Plan and approval by the County Council and HUD. In order to help offset planning related costs \$740,000 was transferred from the CDBG-MIT Buyout Program to CDBG-MIT Planning.

Relation to Hazard Mitigation Needs Assessment

Support for the buyout program will address immediate needs and support the County's long-term hazard mitigation strategy by helping to reduce impacts from future flood events by acquiring developed properties which suffer repeated flood impacts and return them to undeveloped space. This space can then serve as passive or active recreation space, general open space or assist in stormwater management. The importance of this activity is paramount as it directly removes property owners from flood threatened areas which can prevent future property loss and damage as well as limit the number of people who may require rescuing when flood event occur. The program will also provide participation and relocation incentives described in Table 3-1. The activity specifically addresses the following two goals and objectives identified in the County's HMP:

- #3. Enhance existing, or design new, policies and/or programs in the community to reduce the potential damaging effects of hazards without hindering other community goals or impeding hazard mitigation programming in the county.
- #8. Ensure the security of homes, institutions and places of employment throughout the community that are considered vulnerable to natural disasters.

CDBG Eligibility and National Objective:

The acquisition of property is an eligible CDBG activity as described in 24 CFR 570.201 (a). All activities funded through this program will meet the National Objectives requirement under the authorizing statute for CDBG-MIT funds. This project meets the CDBG-MIT defined Urgent Needs Mitigation (UNM) National Objective. Projects utilizing the CDBG-MIT UNM National Objective must indicate that they meet the following two criteria;

1. Addresses the current and future risks as identified in the grantee's Mitigation Needs Assessment of most impacted and distressed areas; and
2. Will result in a measurable and verifiable reduction in the risk of loss of life and property.

The Disaster Mitigation Buyout Program will address issues related to flood risks which were identified as one of the most substantial hazard risks to the County as described in the Hazard Mitigation Assessment included in this plan. Additionally, the project will result in a "measurable and verifiable reduction in the risk of loss of life and property" by directly removing property owners and structures from flood prone areas. With these criteria being met the project can qualify under the UNM National Objective.

Geographic Area:

The projects are located in the following neighborhoods and Lexington County;

- Challedon

- Coldstream
- Pineglenn
- Whitehall

Eligibility Requirements and Threshold Factors:

All activities funded through this program must meet certain eligibility standards to qualify for assistance. The following threshold requirements must be met for a project to be eligible for assistance:

- Project must be located in the County.
- Project must clearly demonstrate a connection to hazard mitigation needs assessment conducted in this Action Plan.
- Project must be CDBG eligible.
- Project must meet a CDBG-MIT national objective.

Grant Size Limits (Buyouts only):

The County's analysis of the existing buyout program indicated that there was an average buyout cost of \$230,000 and therefore, the County established a cap on the CDBG-MIT buyout program of \$270,000. Any properties which may exceed the cap will be addressed through specific steps established under the programmatic policies and procedures for the Buyout Program to be developed following HUD approval of this Action Plan.

Proposed Start/End Dates:

This program is anticipated to begin in 2020 and be completed by 2024.

Responsible Entity:

The County of Lexington is the administrator of a CDBG-MIT Program funded by HUD under Public Law 114-113. The Community Development Department is the agency responsible for administration of mitigation funds allocated to housing, economic development, and infrastructure activities. The Disaster Recovery Administrator is administering these programs directly.

Performance Goals:

The County will acquire 26 properties which will remove those properties, including the people and structures, from ongoing flood hazards by removing structures and maintain the properties as undeveloped sites with limited future use as defined under the buyout guidelines included in the Federal Register.

3.5 Infrastructure Projects

Public Infrastructure Mitigation Program, South Central Lexington County Road Improvements **Program Description:**

As part of its mitigation strategy, Lexington County will implement identified resilience improvements to public infrastructure and facilities that will reduce impacts of future storms on public safety and property damage. To accomplish this, Lexington County is seeking competitive bids from South Carolina Department of Transportation approved contractors for the purpose of paving portions of the following roads: Volliedale Drive, Gary Hallman Circle, and Crout Pond Way/Nathan Miller Road. The current roads are dirt roads which are in substandard condition and are prone to erosion and cannot drain water properly. In their existing conditions, the roads are vulnerable to flooding and erosion issues which affect Public Safety response and access for citizens. The proposed work will consist of the construction activities listed below as well as any associated soft cost such as engineering/architect fees legal costs or similar expenses. Due to feedback from local residents living on Crout Pond Way/Nathan Miller Road in opposition to the project, combined with escalating project costs due to increases in local markets prices, the County decided to remove the Crout Pond Way/Nathan Miller Road activity from the South Central Lexington County Road Improvements project. Based on County analysis the project still meets the National Objective by primarily benefitting Census Tract 208.01, Block Group 1 which contains a **57%** LMI population according to the most recent HUD LMI data, thereby providing benefit to a majority LMI population. It was determined that the project still effectively serves the residents of this block group.

1. Volliedale Drive work will consist of erosion repairs, slope stabilization, drainage improvements to carry a 25-year storm event, and fine grading and surfacing approximately 7,350 linear feet of roadway using 2" Hot Mix Asphalt Surface Course Type C and 6" Graded Aggregate Base Course.
2. Gary Hallman Circle - work will consist of erosion repairs, slope stabilization, drainage improvements to carry a 25-year storm event and fine grading and surfacing approximately 11,595 linear feet of roadway using 2" Hot Mix Asphalt Surface Course Type C and 6" Graded Aggregate Base Course.

The paving of these roads mitigate future flooding and erosion issues by stabilizing the surface of the roads and improving existing storm drainage features.

Program Budget:

The total program budget for this activity is **\$4,267,876** with specific allocations as follows:

Volliedale Drive – **\$1,728,938**

Gary Hallman Circle - **\$2,538,938**

The funds from the Crout Pond Way/Nathan Miller Road activity consisting of \$1,167,150, will be redistributed to equally (rounded to the nearest dollar) amongst the remaining infrastructure projects/activities. These allocations may be increased or decreased with an amendment to the Action Plan and approval by the County Council and HUD.

Relation to Hazard Mitigation Needs Assessment

Support for public infrastructure projects will address immediate needs and support the County's long-term hazard mitigation strategy by helping to reduce impacts from future flood events and ensuring provision of necessary services to residents and businesses. The importance of these services for the health and stability of the County is paramount. Fully functioning and protected public infrastructure

before, during, and after a flood improves safety, mobility, and quality of life for residents and businesses, and promotes long-term health of the County. This activity specifically addresses the following two goals and objectives identified in the County's HMP:

- #2. Increase the community's capacity to initiate and sustain emergency response operations during and after a natural disaster, thereby mitigating effects of hazardous events.
- #9. Ensure that the availability and function of community infrastructure will not be significantly disrupted by a natural disaster.

CDBG Eligibility and National Objective:

Assistance for public facilities and improvements is an eligible activity under the CDBG-MIT Program as described in 24 CFR 570.201 (c). All activities funded through this program will meet the National Objectives requirement under the authorizing statute of the CDBG Program. These road improvement projects are located throughout Census Tract 208.01, Block Group 1 which contains a **57%** LMI population according to the most recent HUD LMI data, thereby providing benefit to a majority LMI population.

Geographic Area:

This project is located on several roads dispersed throughout Census Tract 208.01, Block Group 1.

Eligibility Requirements and Threshold Factors:

All activities funded through this program must meet certain eligibility standards to qualify for assistance. The following threshold requirements must be met for a project to be eligible for assistance:

- Project must be located in the County.
- Project must clearly demonstrate a connection to hazard mitigation needs assessment conducted in this Action Plan.
- Project must be CDBG eligible.
- Project must meet one of the CDBG-MIT national objectives.
- Project must meet duplication of benefits requirements included under CDBG-MIT.

Proposed Start/End Dates:

This program is anticipated to begin in 2021 and be completed by 2024.

Responsible Entity:

The Lexington County Community Development Department is the administrator of a CDBG-MIT Program funded by HUD under Public Law 114-113. Lexington County Community Development is the agency responsible for administration of mitigation funds allocated to housing, economic development, and infrastructure activities. The Lexington County Community Development Department and Public Works Department will work together to directly manage all public infrastructure improvement activities. Contractors will be procured to carry out the actual labor and construction/installation of the road improvement activities. All ongoing maintenance costs associated with road after the project is complete

will be the responsibility of the Public Works Department and their road maintenance schedule. Funds for the maintenance of the roads will be provided through the County's general funds.

Performance Goals:

Lexington County is estimating completing this infrastructure project at the cost of **\$3,684,300**. This project will help increase the safety of the identified roads and the block group's 2,095 residents as well as help reduce future road closures and infrastructure repair costs due to impacts from heavy rain events.

Public Infrastructure Mitigation Program, Culler Road Improvements

Program Description:

As part of its mitigation strategy, Lexington County will implement identified resilience improvements to public infrastructure and facilities that will reduce impacts of future storms on public safety and property damage. To accomplish this, Lexington County is seeking competitive bids from South Carolina Department of Transportation approved contractors for the purpose of paving Culler Road. The current road is a dirt road which is in substandard condition and is prone to erosion and cannot drain water properly. In the existing conditions, Culler Road is vulnerable to flooding and erosion issues, which affect Public Safety response and access for citizens.

Estimated costs include any associated soft cost such as engineering/architect fees, legal costs or similar expenses. The proposed work will consist of erosion repairs, slope stabilization, drainage improvements to carry a 25-year storm event, and fine grading and surfacing approximately 7,585 linear feet of roadway using 2" Hot Mix Asphalt Surface Course Type C and 6" Graded Aggregate Base Course. The paving of Culler Road will mitigate future flooding and erosion issues by stabilizing the surface of the road and improving existing storm drainage features.

Program Budget:

The total program budget for this activity is **\$1,778,937**. The County added \$291,787 to this project's original budget from the elimination of the Crout Pond Way/Nathan Miller Road activity from the South Central Lexington County Road Improvements project. This allocation may be increased or decreased with an amendment to the Action Plan and approval by the County Council and HUD.

Relation to Hazard Mitigation Needs Assessment

Support for public infrastructure projects will address immediate needs and support the County's long-term hazard mitigation strategy by helping to reduce impacts from future flood events and ensuring provision of necessary services to residents and businesses. The importance of these services for the health and stability of the County is paramount. Fully functioning and protected public infrastructure before, during, and after a flood improves safety, mobility, and quality of life for residents and businesses, and promotes long-term health of the County. This activity specifically addresses the following two goals and objectives identified in the County's HMP:

- #2. Increase the community's capacity to initiate and sustain emergency response operations during and after a natural disaster, thereby mitigating effects of hazardous events.
- #9. Ensure that the availability and function of community infrastructure will not be significantly disrupted by a natural disaster.

CDBG Eligibility and National Objective:

Assistance for public facilities and improvements is an eligible activity under the CDBG-MIT Program as described in 24 CFR 570.201 (c). All activities funded through this program will meet the National Objectives requirement under the authorizing statute of the CDBG Program. This project primarily provides benefits to a majority LMI population located east of Swansea. This project is located in and serves residents in Census Tract 208.01, Block Group 1 which contains a **66%** LMI population according to the most recent HUD LMI data.

Geographic Area:

This project is located on Culler Road between Calvary Church Road and the Calhoun County line in Census Tract 208.01, Block Group 1.

Eligibility Requirements and Threshold Factors:

All activities funded through this program must meet certain eligibility standards to qualify for assistance. The following threshold requirements must be met for a project to be eligible for assistance:

- Project must be located in the County.
- Project must clearly demonstrate a connection to hazard mitigation needs assessment conducted in this Action Plan.
- Project must be CDBG eligible.
- Project must meet one of the CDBG-MIT national objectives.
- Project must meet duplication of benefits requirements included under CDBG-MIT.

Proposed Start/End Dates:

This program is anticipated to begin in 2021 and be completed by 2024.

Responsible Entity:

The Lexington County Community Development Department is the administrator of a CDBG-MIT Program funded by HUD under Public Law 114-113. Lexington County Community Development is the agency responsible for administration of mitigation funds allocated to housing, economic development, and infrastructure activities. The Lexington County Community Development Department and Public Works Department will work together to directly manage all public infrastructure improvement activities. Contractors will be procured to carry out the actual labor and construction/installation of the road improvement activities. All ongoing maintenance costs associated with road after the project is complete will be the responsibility of the Public Works Department and their road maintenance schedule. Funds for the maintenance of the roads will be provided through the County's general funds.

Performance Goals:

Lexington County is estimating completing this infrastructure project at the cost of **1,778,937**. This project will help increase the safety of Culler Road and the block group's 1,655 residents and help reduce future road closures and infrastructure repair costs due to impacts from heavy rain events.

Public Infrastructure Mitigation Program, Charles Town Road Improvements

Program Description:

As part of its mitigation strategy, Lexington County will implement identified resilience improvements to public infrastructure and facilities that will reduce impacts of future storms on public safety and property damage. To accomplish this, Lexington County is seeking competitive bids from South Carolina Department of Transportation approved contractors for the purpose of paving Charles Town Road. The current road is a dirt road which is in substandard condition and is prone to erosion and does not drain

water properly. In the existing conditions, Charles Town Road is vulnerable to flooding and erosion issues which affect Public Safety response and access for citizens. Estimated costs include any associated soft cost such as engineering/architect fees, legal costs or similar expenses. The proposed work will consist of erosion repairs, slope stabilization, drainage improvements to carry a 25-year storm event, and fine grading and surfacing approximately 10,870 linear feet of roadway using 2" Hot Mix Asphalt Surface Course Type C and 6" Graded Aggregate Base Course. The paving of Charles Town Road will mitigate future flooding and erosion issues by stabilizing the surface of the road and improving existing storm drainage features.

Program Budget:

The total program budget for this activity is **\$2,388,937**. The County added \$291,787 to this project's original budget from the elimination of the Crout Pond Way/Nathan Miller Road activity from the South Central Lexington County Road Improvements project. This allocation may be increased or decreased with an amendment to the Action Plan and approval by the County Council and HUD.

Relation to Hazard Mitigation Needs Assessment

Support for public infrastructure projects will address immediate needs and support the County's long-term hazard mitigation strategy by helping to reduce impacts from future flood events and ensuring provision of necessary services to residents and businesses. The importance of these services for the health and stability of the County is paramount. Fully functioning and protected public infrastructure before, during, and after a flood improves safety, mobility, and quality of life for residents and businesses, and promotes long-term health of the County. This activity specifically addresses the following two goals and objectives identified in the County's HMP:

- #2. Increase the community's capacity to initiate and sustain emergency response operations during and after a natural disaster, thereby mitigating effects of hazardous events.
- #9. Ensure that the availability and function of community infrastructure will not be significantly disrupted by a natural disaster.

CDBG Eligibility and National Objective:

Assistance for public facilities and improvements is an eligible activity under the CDBG-MIT Program as described in 24 CFR 570.201 (c). All activities funded through this program will meet the National Objectives requirement under the authorizing statute of the CDBG Program. This project primarily provides benefits to a majority LMI population located southwest of Pelion. This project is located in and serves residents in Census Tract 209.03, Block Group 1 which contains a **69%** LMI population according to the most recent HUD LMI data.

Geographic Area:

This project is located on Charles Town Road between Convent Church Road and Hartley Quarter Road.

Eligibility Requirements and Threshold Factors:

All activities funded through this program must meet certain eligibility standards to qualify for assistance. The following threshold requirements must be met for a project to be eligible for assistance:

- Project must be located in the County.

- Project must clearly demonstrate a connection to hazard mitigation needs assessment conducted in this Action Plan.
- Project must be CDBG eligible.
- Project must meet one of the CDBG-MIT qualified national objectives.
- Project must meet duplication of benefits requirements included under CDBG-MIT.

Proposed Start/End Dates:

This program is anticipated to begin in 2021 and be completed by 2024.

Responsible Entity:

The Lexington County Community Development Department is the administrator of a CDBG-MIT Program funded by HUD under Public Law 114-113. Lexington County Community Development is the agency responsible for administration of mitigation funds allocated to housing, economic development, and infrastructure activities. The Lexington County Community Development Department and Public Works Department will work together to directly manage all public infrastructure improvement activities. Contractors will be procured to carry out the actual labor and construction/installation of the road improvement activities. All ongoing maintenance costs associated with road after the project is complete will be the responsibility of the Public Works Department and their road maintenance schedule. Funds for the maintenance of the roads will be provided through the County's general funds.

Performance Goals:

Lexington County is estimating completing this infrastructure project at the cost of **\$2, 388,937**. This project will help increase the safety of Charles Town Road and the block group's 2,775 residents and help reduce future road closures and infrastructure repair costs due to impacts from heavy rain events.

4. Citizen Participation Efforts

4.1 Public Hearings

As required under Federal Register Notice, 84 FR 45838, August 30, 2019, Lexington County held two public hearings. The first public hearing was conducted as a virtual public hearing due to safety concerns and public gathering restrictions due to COVID-19. The hearing was advertised on June 4, 2020 and was published in The Chronicle Newspaper, put on display in the Lexington County's Administration Building (a public facility) and was published on the County's website. The hearing was held on June 10, 2020. The purpose of the first public hearing was to inform the public of the allocation of CDBG-MIT funds and provide them with information pertaining to its requirements and the development of the Action Plan. The County will also use the hearing to obtain feedback from the public regarding mitigation concerns and answer questions regarding the CDBG-MIT funding and its requirements.

The draft action plan was then posted on the County's CDBG Mitigation website on June 12, 2020 for public review and comments. The public was notified of a 45-day comment period following the post of the draft Action Plan in order to provide comments and feedback. The document was made available for review on the County of Lexington Disaster Mitigation webpage and in hard copy form at the County Community Development Offices at 212 S. Lake Drive, Lexington SC 29072. The second public hearing, which was also a virtual public hearing, was advertised on June 18, 2020 and was held on July 2, 2020. The purpose of this hearing was to notify the public on the proposed projects listed in the Action Plan. The second public hearing utilized the same public notification methods and was also held as a "virtual hearing".

The draft Action Plan was made available for public review and comment from June 12, 2020 through July 27, 2020. All comments received by the County during this public comment period has been added as an attachment to this Action Plan. The Action Plan draft was and still is available on the County's CDBG-MIT website:

<https://www.lex-co.sc.gov/departments/community-development/grant-programs/cdbgmigration>

Public hearings and any documents maintained by the County are available at the County administrative building which is ADA accessible. All documents will be made available through the County's website in PDF format which is typically compatible with software designed to assist those with reading or vision difficulties. The County will make materials available and provide services as may be requested by the public.

4.2 Summary of Public Comments

The County received several questions regarding the Action Plan during its public comment period. While there were no questions asked by the public during the formal public hearings, the County did receive inquiries via email submissions. County staff responded to all questions and comments submitted by the public and took the views, recommendations, concerns and questions into consideration during final Action Plan development. The inquiries and the County's responses are included in Attachment #1 of the Action Plan. Public hearings and any documents maintained by the County are available at the County administrative building which is ADA accessible. All documents will be made available through the County's website in PDF format which is typically compatible with software designed to assist those with reading or vision difficulties. The County will make materials available and provide services as may be requested by the public.

4.3 Citizen Advisory Committee

Lexington County will develop a Citizen Advisory Committee for the CDBG-MIT funding allocation and its associated projects as required under Federal Register Notice, 84 FR 45838, August 30, 2019. The County will develop this Committee upon HUA approval of the County Action Plan for the CDBG-MIT allocation. The County's Community Development Department will work in coordination with other County departments involved with CDBG-MIT activities to identify potential members for the committee. The County will seek to identify members from all regions of the County to help ensure an extensive geographic representation. Additionally, the County will make attempts to include members that represent a diverse make-up of County residents. Some of the people and stakeholders to be considered as part of the committee make-up will include but not be limited to:

- Neighborhood representatives/leaders
- Community representatives

- Faith based leaders
- Representatives from specific racial or ethnic groups
- Groups or stakeholders assisting seniors and the aging
- Emergency response
- School board members
- Groups serving low income populations
- Homeowner association representatives
- Community service providers such as YMCA, Habitat for Humanity, Salvation Army

Once the committee is assembled it will be required to meet in a public forum at a minimum of twice a year. The purpose of the meetings will be to provide updates to the committee regarding CDBG-MIT activities and progress. The County will also continue to collect information from the committee regarding natural hazard impacts and concerns as well as discuss ongoing hazard mitigation considerations posed by the public or being considered by the County.

4.4 Action Plan Amendments

Throughout the course of the CDBG-MIT program, it may become necessary to amend the County's Action Plan. There are two types of Action Plan amendments: 1) Minor Amendments and 2) Substantial Amendments. Minor Amendments include making changes to the plan to correct typographical errors or improved and updated information provided to the plan. An amendment will be classified as a Substantial Amendment if it meets the following criteria:

- Any new eligible activity funded with supplemental CDBG funds, such as CDBG-DR, CDBG-MIT and CDBG-CV, not already identified in the Action Plan developed specific to those funds;
- The addition of a CDBG-MIT HUD defined "Covered Project" for CDBG-MIT funding.
- Adding additional program options or eligible activities for supplemental CDBG funds, such as CDBG-DR, CDBG-MIT and CDBG-CV funded projects.
- The deletion of any activity funded with supplemental CDBG funding such as CDBG-DR, CDBG-MIT and CDBG-CV.
- A change in the target areas served by the program
- Changes made in allocation priorities or methods of distribution that have the effect of changing the funding level of individual CDBG-MIT projects identified in the CDBG-MIT Action Plan by more than 10% of the total CDBG-MIT funding allocation.

Any changes to the Action Plan that are considered minor or non-substantial do not require the Citizen Participation process, however, the County will post the amendment to the County's CDBG-MIT website and notify HUD of the non-substantial amendment.

If a Substantial Amendment becomes necessary, the County will first publish the Substantial Amendment for a thirty (30) day public comment period. Following the Citizen Participation process, the County will

submit the amended Action Plan to HUD for approval. Upon HUD approval, the revised Action Plan will be posted to the County's CDBG-MIT website.

The County made the Action Plan containing Amendment #1 (Amended Action Plan #1) available for public review and comment for 30 days. The document was made available for review on the County of Lexington Mitigation webpage and in hard copy form at the County Community Development Offices at 212 S. Lake Drive, Lexington SC 29072.

The County did not receive any comments regarding the Amendment #1 to the Action Plan.

The Action Plan Amendment #2 was made available for public review on the County's website for 30 days, from August 4, 2022 to September 6, 2022. The County didn't receive any comments from the public.

5. Planning & Coordination

Effective communication between and within departments is a major focus of the County of Lexington on all projects, operations and efforts. In addition to normal telephone and e-mail correspondence, the County Administrator holds a weekly Department Head/Senior Staff meeting during which he discusses important activities of the County, and attendees are required to provide updates to major activities occurring in their department(s).

The Organization Structure for the County of Lexington CDBG-MIT team was structured around that of the existing CDBG-DR team and the "Program Review Committee". This committee is appointed by and answers to the County Administrator and will be chaired by the Director of Community Development. The membership of the committee will consist of Department Heads and/or Senior Staff and/or team leaders from the following groups:

- Finance Department
- Procurement Department
- Public Safety (Emergency Management)
- County Sheriff's Department
- Human Resources
- Planning & GIS/Mapping,
- Community Development (Zoning Management, Landscape & Open Space Management, Building Inspections & Safety)

This Program Review committee will meet on a regular basis and as-needed for specific issues. The committee will also serve as an outlet for citizens to appeal decisions of the program staff when needed. The County Administrator may request additional departments to assist in monitoring/reviewing the progress of the CDBG-MIT program(s).

6. Mitigation Commitments

In addition to undertaking and promoting mitigation activities intended to reduce future impacts of natural hazards, the County is also committed to utilizing and managing the CDBG-MIT funds with integrity and in compliance with all federal state and local laws, requirements and guidelines. These commitments extend beyond providing CDBG-MIT projects and services which assist in mitigating future hazard impacts but also include promoting and sustaining the efficient and effective management and implementation of these activities. This includes using the funds in the most effective means possible while serving the greatest needs of the County's residents. The County intends to continue its mitigation commitments beyond the utilization of CDBG-MIT funds. It is understood that any long-term changes must come in coordination with county departments, government agencies and the public. Any changes regarding any codes, standards or policies within the County resulting from this Action Plan or the associated MNA will only occur after significant communication and coordination among County agencies and departments and their review of the final Action Plan.

As the County continues to move forward, it is dedicated to ongoing support and protection of its residents and the businesses and services that are located here. The County seeks to continue with its ongoing recovery activities but also seeks to increase its resilience to disasters of all types while engaging in mitigation activities to help reduce future impacts from hazards. This involves using the mitigation needs assessment and its findings, as well as information provided in this Action Plan and the forthcoming regional HMP to help guide decisions and actions moving forward. In order to increase community resilience and mitigate impacts from future disasters the County will consider future planning activities and capital improvements through the lens of hazard mitigation. The County believes that incorporating changes and engaging in activities that support mitigation efforts, will occur most effectively and efficiently if they are incorporated as natural additions of planning and project consideration, engagement and implementation. This will help mitigation be seen as a natural extension of these activities rather than as a stand alone concept to be tagged on as an addition to these activities.

6.1 Leverage of Funds

The County will leverage its CDBG-MIT funds with other federal and non-federal funding sources to the greatest extent possible to maximize the impact of disaster relief monies and prevent duplication of benefits. The County has programmed CDBG-MIT funds to address funding needs not satisfied by other funding sources such as FEMA Individual Assistance and Public Assistance grants, SBA Disaster Loans, NFIP claims and private insurance claims. Due to the limited availability of other funding sources the County does not have additional funds to leverage with its CDBG-MIT funds. The County will continue to seek additional funds to leverage with CDBG-MIT funds in order to allow CDBG-MIT funds to be utilized to the greatest extent possible.

6.2 Duplication of Benefits

Federal law prohibits any person, business concern, or other entity from receiving Federal funds for any part of such loss as to which he/she has already received financial assistance under any other program, private insurance, charitable assistance or any other source. Such duplicative funding is called Duplication of Benefit (DOB) which is defined under the Robert T. Stafford Act (Stafford Act). These requirements were first introduced to CDBG allocated funds under the CDBG-DR allocation for disaster recovery.

Pursuant to the Stafford Act, the County will establish and follow policies and procedures to uphold the safeguard against DOB within its program guidelines for each eligible activity. Understanding that prevention of DOB is especially critical in the context of housing programs and in anticipation that some form of housing assistance will be identified to fulfill unmet disaster recovery needs at the conclusion of the County's Action Plan development process, the County has established a framework for identifying potentially duplicative sources of funds and reducing documented duplications from potential project awards prior to any award actually being made. Additional information can be found in the County's Duplication of Benefits Policies and procedures included in Appendix J of the County's CDBG-MIT PreAward Implementation Plan.

6.3 Timely Information on Application Status

Effective communication is paramount to the successful delivery of complex public programs, particularly in the wake of a disaster. The County of Lexington will, at a minimum, engage in a two-tiered applicant communication strategy, with larger program-wide information being made available on the County's hazard mitigation website and proactive case management to move applicants along within program processes, notifying applicants of status at each critical juncture.

The County understands that a lack of information about program resources, progress, and the status of applications for assistance can exacerbate frustration from potential program beneficiaries. Further, the processes required to deliver benefits, particularly in housing-related activities, are multi-step complex processes that require extensive documentation. The incremental steps within a program require time, and often patience. To mitigate the anxiety of applicants and keep them apprised of application progress, the County of Lexington has instituted a case management system that allows for real-time status updates to applicants upon request. This system will only be accessible to County staff and consultants overseeing the case management to insure the privacy of all applicants and any personally identifiable information. (PII). The County will continue to utilize the information distribution and communication process set up under CDBG-DR to provide applicants with timely information. This process includes:

- Providing direct access to an applicant's designated case manager
- Monitor case manager caseloads and adjust as necessary to keep caseloads at reasonable levels that will ensure frequent applicant contact
- Sending electronic status notifications after critical milestones have been achieved as well as outlining next steps
- Sending printed status updates to applicants who do not have access to electronic media
- Face-to-face consultations with case managers
- After-hours voicemail systems monitored daily and instituting a policy of return calls within 24hours of voicemail receipt
- Case manager email contact information provided to applicants

6.4 Protection of People and Property

The County will closely monitor each project utilizing CDBG-MIT funding to verify that quality materials and standards are being utilized, that all necessary permits and approvals are in place, and that green building standards are being incorporated when possible and cost effective. To improve the protection of County residents and property, site visits will be conducted regularly during construction to verify that the proper materials and construction standards are being applied during the project. This will include the use

of high-quality materials as well as adherence to other standards that will increase resident safety and property protection.

6.4.1 Construction Standards

All construction work undertaken with CDBG-MIT funds will be performed in accordance with all applicable local codes, rehabilitation standards, ordinances, and zoning ordinances at the time of project completion. International Residential Code (IRC) 2012 will be adhered to as required and where appropriate. All construction will use high-quality materials and will meet industry standards while focusing on long-term durability and quality. The County will not utilize any previously used or secondhand material in its construction and all construction will be overseen by a qualified construction manager. Where and when possible the County will utilize “green” or energy efficient building materials and construction methods. Since the purpose of these funds are to mitigate impacts from future disaster all construction will be undertaken with the intent for the design and construction to mitigate the impacts of future disasters. Road construction specifically will involve proper elevation and grading of the road to allow for the appropriate drainage of rainwater. Construction will also involve the inclusion of stormwater management systems along the road to better handle and transport rainwater.

The County does not anticipate using CDBG-MIT funds for residential construction and these construction standards will be updated and clarified if such construction is undertaken with CDBGMIT funds.

6.4.2 Contractor Standards

Contractors interested in participating in the CDBG-MIT program:

- Must not be listed on the Federal, State, or County debarment list.
- Must submit a completed *Contractor Application* and new vendor packet.
- Must participate in the County’s Contractors’ Workshop (a certificate of completion will be issued).
- Must have verification of current contractor liability, worker’s compensation, and auto insurance.

Once all applicable requirements are satisfied, contractors will be placed on a list of approved contractors for Lexington County and will be given the opportunity to bid on projects as they become available. The bidding process is handled through the Procurement Department and follows Lexington County Procurements Rules and Regulations.

Once a contractor is awarded a project, the contractor is responsible for the quality of their work, the work of his/her employees, and work performed by any subcontractors and their employees.

6.4.3 Personally Identifiable Information

The County will make all possible efforts to protect Personally Identifiable Information (PII) of program beneficiaries. The County will collect and maintain all PII under its existing guidelines and in compliance with the Privacy Act (5 U.S.C. 552a) and all other federal, state, and local laws. Individual program policies and procedures will provide details regarding the steps that will be taken to protect information including the security of facilities, files and documents which contain such information. Additionally, and PII that is held in digital format will only be held on secured

systems with limited access by staff or consultants approved to manage CDBG-MIT or engage in compliance activities.

6.4.4 Complaints

Written complaints from the public related to this Action Plan (or its amendments), QPRs, or the County's activities or programs funded with CDBG-MIT, will receive careful consideration and will be answered in writing, or other effective method of communication, within fifteen (15) business days, where practicable. Additional information regarding complaints is provided in the County's CDBG-MIT Pre-Award Implementation Plan.

6.4.5 Appeals

The County has established a formal appeals process which is described in the County's CDBGMIT Pre-Award Implementation Plan. The document will be posted on the County's CDBGmitigation website and available for the public to review and reference.

6.5 Necessary and Reasonable Costs

Part of the process in the duplication of benefits procedures involves verifying necessary and reasonable costs. This helps ensure that funds are efficiently and effectively utilized. The determination of necessary and reasonable costs will apply to any project or program receiving funding as well as administrative and planning funds. The County will utilize the cost principles described in 2 CFR Part 225 (OMB Circular A-87) to determine necessity and reasonableness. According to 2 CFR part 225, "A cost is reasonable if, in its nature and amount, it does not exceed that which would be incurred by a prudent person under the circumstances prevailing at the time the decision was made." The County will follow these principles and fund only project costs that are deemed necessary and reasonable.

6.6 Minimizing Displacement

Consistent with the County's Consolidated Plan, CDBG-MIT funded activities will be designed to eliminate (or minimize) the occurrence of displacement. The County will minimize displacement of persons or entities and assist persons or entities displaced as a result of implementing a project with CDBG-MIT funds. The County's strategy to minimize displacement is to only engage in projects that don't inherently result in the potential for displacement. No infrastructure projects will be undertaken that involve the potential for displacement. If a project is identified that may involve displacement the County will seek to replacement project with another qualified, eligible project in order to minimize, or in this case eliminate, displacement. The only potential for displacement could lie in properties to be acquired which contain renters. While this is unlikely as any residential buyout project will be designed as an owneroccupied program there may be unique cases that involve renters. If this occurs, the County will follow all of the requirements and regulations pertaining to URA as they apply to such a scenario.

The County will ensure that the assistance and protections afforded to persons or entities under the Uniform Relocation Assistance and Real Property Acquisition Policies Act (URA), and Section 104(d) of the Housing and Community Development Act of 1974, are available. The URA provides that a displaced person is eligible to receive a rental assistance payment that covers a period of 42 months. Given its priority to engage in voluntary buy-outs and optional relocation activities to avoid repeated flood damage and improve floodplain management, the County will utilize the HUD waiver of the Section 104(d) requirements, which assures uniform and equitable treatment by setting the URA and its implementation regulations, as the sole standard for relocation assistance. Efforts to conduct voluntary buyouts for destroyed and extensively damaged buildings in a floodplain may not be subject to all provisions of the URA requirements. All rental tenants that become displaced, as a result of the homeowner participating

in the buyout program, will receive either \$5,000 in relocation assistance or full URA benefits – whichever is greater.

6.7 Uniform Relocation

The County does not anticipate engaging in any activities qualifying as uniform relocation eligible activities. All buyouts consist of voluntary owner-occupied structures and will not result in the displacement of any persons renting or leasing the property, structure or space within the structure. If a project does involve relocation then the following items become applicable.

Under the Uniform Relocation Act (URA) displaced persons are eligible to the following benefits:

- Advisory services;
- Offer of a comparable replacement unit;
- Replacement housing payments; and
- Moving expenses. Under the URA, the term "displaced person" means:
 - 1) A person who moves permanently from the real property after the property owner (or person in control of the site) issues a vacate notice to the person, or refuses to renew an expiring lease in order to evade the responsibility to provide relocation assistance, if the move occurs on or after:
 - a. The date the Grantee submits a project application for CDBG-MIT funds for the project that is later approved, if the Grantee has site control; or,
 - b. The date the Grantee obtains site control, if that occurs after the project application is submitted and approved.
 - 2) A person who moves permanently from the real property after the initiation of negotiations, unless the person is a tenant who was issued a written notice of the expected displacement prior to occupying the property (otherwise known as a "Notice of Eligibility for Relocation Assistance").
 - 3) A person who moves permanently and was not issued a Notice of Non-displacement after the application for CDBG-MIT funds is approved.

6.8 Broadband Infrastructure

P.L. 115-123 requires installation of broadband infrastructure for all new construction or substantial rehabilitation activities, as defined by 24 CFR 5.100, of a building with more than four rental units. At this time, the County will not be funding new construction or substantial rehabilitation programs and therefore this requirement will not be prompted.

7. Monitoring Standards & Reporting Requirements

The County of Lexington will continue to use the monitoring process established under the CDBG-DR funding allocation which includes several layers of approvals before funds are expended. This will continue to allow the County to, in essence, "monitor" the use of funds on an individual basis. This process

includes multi-level review of the use of funds. These reviews occur throughout the organization, from the front-line contractor(s) up through the Community Development Director (CDD), the procurement office and ultimately the County's Chief Financial Officer (CFO). The CDD and the CFO each answer directly to the County Administrator. At every level of the process, there is an evaluation made to determine that the use of funds is legitimate and in keeping with the requirements of the governing policies, procedures, rules, regulations, ordinances and laws. If any other determination is reached, the use of funds is delayed until further information is obtained. If the additional information does not result in a positive determination, the use of funds for that purpose will not be allowed. Because the County will be directly overseeing the delivery of all CDBG-MIT activities, monitoring will be an on-going effort. The CDBG-DR Grant Manager will also act as the CDBG-MIT Grant Manager for efficiency purposes and will personally monitor all contractors including direct review and approval of all contractor invoices. The CDBG-MIT Grant Manager will conduct periodic on-site monitoring and a County Building Inspector will conduct inspections for each property involved in potential housing programs involving construction. In addition, the CDBG-MIT Grant Manager will directly oversee quality control related to client application, file management, contractor relations with homeowners as well as the public reporting requirements described below.

7.1 Disaster Recovery Grants Reporting Database (DRGR)

HUD will utilize its existing online data reporting system, the Disaster Recovery Grants Reporting Database (DRGR). Use of this system is required by all CDBG-MIT grantees. The County will ensure staff has adequate training for the effective management of the DRGR Database.

7.2 Quarterly Performance Reports (QPRs)

Within DRGR, all grantees are required to produce Quarterly Performance Reports or QPRs. QPRs are due 30 days after the end of each calendar year quarter. Each quarterly report will include information about the uses of funds during the applicable quarter including (but not limited to) the project name, activity, location, and national objective; funds budgeted obligated, drawn down, and expended; the funding source and total amount of any non-CDBG Mitigation funds to be expended on each activity; beginning and completion dates of activities; achieved performance outcomes; and the race and ethnic status of persons assisted under direct-benefit activities. Once approved by HUD, the County will publish all QPRs on its CDBG-MIT website.

A quarterly performance report (QPR) will be submitted to HUD no later than 30 days following the end of each quarter after grant award and continuing until all funds have been expended and all expenditures have been reported. No less than three (3) days prior to submitting to HUD, the County will post the QPR to the website for public comment. In addition to these required reports, the County will also post its procurement policies, executed CDBG-MIT contracts as well as the status of services or goods currently being procured by the County.

7.3 Program Income Reporting & Tracking

Program Income is defined as "gross income generated from the use of CDBG-MIT funds and received by the Unit of General Local Government (UGLG)." Examples of program income include, but are not limited to, the following: a) proceeds from the disposition by sale or lease of real property purchased or improved with CDBG-MIT funds, b) proceeds from the disposition of equipment purchased with CDBG-MIT funds, c) net income from the use of rental property owned by the UGLG. The County does not anticipate generating any program income with the utilization of CDBG-MIT funds. However, should program income be generated, the County will track the receipts within the County's financial records and report

the receipts to HUD via the DRGR database as required in the regulations. All program income received prior to grant closeout shall be utilized for additional eligible CDBG-MIT activities. Any program income remaining after the CDBG-MIT program closeout will be transferred into the County's CDBG entitlement program.

7.4 Disaster Recovery Program Website

The County of Lexington has created a website to keep the public informed about hazard mitigation activity and resources. The website will be maintained by the County's Information Services Department. It will be accessible through the main page of the County Government website. The County will maintain this website throughout the period of ongoing CDBG-MIT activity. It will serve as the primary repository of information for the County's disaster recovery actions and resources and will contain links to all action plans, action plan amendments, quarterly performance reports (QPRs), citizen participation plans, procurement policies, procurement notices/advertisements, notices of public meetings, executed contracts, activity/program information for activities described in the action plan and other information relevant to the CDBG-MIT program funds. Updates to the website will be made in conjunction with any new activity associated with the CDBG-MIT program action plan and funds. Constituents will be able to lodge complaints via an email link on the website. The email address will be monitored daily. The County will respond promptly within fifteen (15) days of receipt of each complaint. The CDBG-MIT Grant Manager will monitor the email address, log all complaints and coordinate to provide the response.

All documents will be made available in a language other than English upon request.

7.5 Internal Auditor

In conjunction with the administration and oversight of the CDBG-MIT programs, the County will conduct annual auditing activities as part of its standard annual auditing process. The County hires an outside auditor who provides both programmatic and financial oversight of the CDBG-MIT program. The role of the independent internal auditor will be to conduct internal monitoring/audits throughout the year of County administered CDBG-MIT programs and activities as required by HUD guidelines and P.L. 115-123. In addition, the internal auditor will assist in the detection and prevention of fraud, waste, and abuse in county- and contractor-administered programs.

7.6 Timely Expenditure of the Funds

Per Federal Register Notice, 84 FR 45838, 50% of CDBG-MIT funds must be expended within a six (6) year time frame beginning on the date the grant agreement is signed by HUD. The County must expend 100% of the CDBG-MIT funds within 12 years of HUD's execution of the grant agreement absent a waiver. However, we understand that HUD will periodically review the County's progress in drawing down funding from its Line of Credit (LOC). The County of Lexington will review in-house expenditures and beneficiary expenditures to ensure that funds are spent on eligible costs and in a timely manner. Project funds and schedules will be monitored by the County of Lexington's Finance Department, the Department of Community Development and the County's planning and management consultant(s), and ultimately audited through the County's independent audit function.

As the County of Lexington is an entitlement community and recipient of CDBG-DR funds, County staff members already have experience with monitoring the expenditure rate of its annual CDBG allocation. With the County's current allocation of CDBG and CDBG-DR funds, the County of Lexington's Department of Community Development maintains detailed spreadsheets monitoring the expenditure of funds and project schedules. As part of its CDBG-DR allocation the County had made a variety of changes to adapt and enhance their internal grant management processes. These included establishing standard tracking mechanisms, processes and templates to ensure consistency and continuity among program activities.

These changes will be incorporated into the management of the CDBG-MIT funds as well. The County of Lexington will also maximize its use of technology to support and augment any standard processes instituted to ensure timely expenditure of funds.

The County of Lexington will hold all contractors accountable through the establishment of benchmarks and other critical milestones. Contractors will be required to provide detailed reports concerning expenditure of funds and project progress to the County upon request. Frequency of reporting will be established on a per project basis given the potential varied nature of eligible activities that the County may choose. It is expected that the County will require contractors to provide monthly reports; however, due to the varying nature of each project, specific projects may be asked to provide those project updates more frequently.

Based on weekly expenditure tracking, the County will monitor the CDBG-MIT programs and specific projects to confirm program expenditures are on track and will be completed per the schedule. If any funds need to be reprogramed, the County will discuss with advisory board and an amendment will be submitted. The Financial Coordinator will work alongside the Community Development Department to ensure timely expenditures.

The County expects, at this time, that it will directly administer all CDBG-MIT funds and will use contractor augmentation to execute implementation. When contracting with vendors, the County will establish certain benchmarks that must be achieved prior to the release of funding. As a part of their contractual obligations to the County, contractors will be required to present the County with a plan on how they will implement procedures to reach the determined benchmarks. Each contract with contractors will require that penalties be implemented for failure to reach benchmarks. In addition to ensuring that contractors are meeting project timelines, these benchmarks will allow the County to project expenditures for each individual project.

Per Federal Register Notice 84 FR 45838, The County of Lexington will submit a projection of expenditures and an outcomes plan to HUD with the Action Plan. Revised projections will be sent to HUD when program changes impact projected outcomes, funding levels and recovery timelines. We understand that HUD will use this information to track the County's proposed versus actual performance. It will serve as a tool to measure overall performance as well as project specific performance. The County will aggressively monitor its contractors, using benchmarks, milestones and projections to prevent bottlenecks in the process while also minimizing delays in expending funds for eligible project activities.

7.7 Expenditure Requirements

CDBG-MIT allocations have unique expenditure requirements that are different than both CDBG-DR and CDBG entitlement requirements. These requirements were defined in the CDBG-MIT Notice and require that 100% of the CDBG-MIT funds must be expended within 12 years of HUD's execution of the grant agreement. Additionally, 50% of the funds must be expended within 6 years of HUD's execution of the grant agreement.

Table 7-1 Expenditure Table

Project	Total Expended						
	Year 1 2020	Year 2 2021	Year 3 2022	Year 4 2023	Year 5 2024	Year 6 2025	Years 7-12 2026-2032

Administration	\$75,925 (10%)	\$227,775 (30%)	\$379,625 (50%)	\$531,475 (70%)	\$683,325 (90%)	\$759,250 (100%)	
Planning			\$100,000 (13%)	\$350,000 (47%)	\$500,000 (67%)	\$750,000 (100%)	
Residential Buyouts	\$598,000 (10%)	\$2,093,000 (35%)	\$4,485,000 (75%)	\$5,240,000 (100%)	\$5,240,000	\$5,240,000	
South Central Lexington County Road Improvements		\$426,788 (10%)	\$2,133,938 (50%)	\$3,841,088 (90%)	\$4,267,876 (100%)	\$4,267,876	
Culler Rd. Improvements		\$177,894 (10%)	\$889,469 (50%)	\$1,601,043 (90%)	\$1,778,937 (100%)	\$1,778,937	
Charles Town Rd. Improvements		\$238,894 (10%)	\$1,194,469 (50%)	\$2,150,043 (90%)	\$2,388,937 (100%)	\$2,388,937	
Cumulative CDBG-MIT Expenditures	\$673,925 (4.4%)	\$3,164,351 (20.8%)	\$9,182,501 (60.5%)	\$13,713,649 (90.3%)	\$14,859,075 (97.9%)	\$15,185,000 (100%)	

7.8 Monitoring of Subrecipients

Although the County does not expect to have subrecipients under the CDBG-MIT program, the County will comply with its monitoring responsibilities of subrecipient projects funded under Title I of the Housing and Community Development Act of 1974, as amended, if needed. The Grants staff will utilize both “desk monitoring” and “internal/on-site” monitoring to assess the quality of program performance over the duration of the agreement or contract. The following Monitoring Plan will be utilized:

Subrecipient Monitoring Plan Objectives

The objectives are to ensure that subrecipients:

- Carry out their CDBG-MIT funded projects in a timely manner, as described in their agreements (as modified or amended).
- Comply with all regulations governing their administrative, financial, and programmatic operations.
- Achieve their performance objectives within schedule and budget.
- Have the capacity to carry out the approved program or project.

Subrecipient Monitoring Guidelines

The Lexington County Grant Programs staff will maintain frequent contact with subrecipient personnel in order to achieve the objectives cited above. An annual training will be conducted covering the applicable federal rules and regulations to be followed by each subrecipient in the administration of their CDBG-MIT projects. The training will cover administrative, financial and programmatic requirements. The training will also cover common monitoring findings and to prevent errors for future monitoring.

The following steps are the standard monitoring policies and procedures which will be followed:

- Review and analyze project budgets, national objectives, activity eligibility and other application details to determine potential projects.
- Prepare thorough and comprehensive subrecipient agreement providing details of the project and requirements.
- Evaluate environmental impact of project and implement required procedures.
- Review ongoing written status reports and other communications to monitor for adherence to timelines and compliance requirements.
- Visit project site before, during and after construction.
- Monitor all subrecipient projects at least once during the project to determine compliance with all applicable laws, regulations and policies.
- Review and approve payment requests.
- Prepare and coordinate monthly reports on project status, expenditures to date, and timeliness.
- Prepare monthly report of CDBG-MIT draws detailing funds drawn on each active project and overall progress made to meet HUD timeliness requirements.

The Lexington County Grant Programs Division staff will conduct desk and on-site monitoring of CDBGMIT activities and subrecipients. The desk monitoring includes on-going review of reimbursement requests and monthly reports. The on-site monitoring utilizes a checklist to evaluate the compliance of the projects/activities with all aspects of the CDBG program. The subrecipient will be informed at least fourteen (14) days in advance of the time of an on-site visit, the purpose of the visit and the compliance areas to be covered.

The areas monitored may include:

- Overall Management System
- Program Benefit
- Record Keeping
- Progress in Activities
- National Objectives
- Environmental Review
- Financial Management
- Procurement
- Labor Standards
- Non-Construction Contracts
- Acquisition/Relocation
- Compliance with federal regulations

Subrecipient Monitoring Results

A letter reporting the results of monitoring will be sent to the subrecipient. The monitoring letter may contain the following:

- Contract number of grant monitored
- Date(s) of monitoring
- Names(s) of CDBG-MIT staff who monitored
- Scope of monitoring
- Names of local officials involved in the monitoring visit
- Monitoring conclusions supported by facts considered in reaching the conclusions
- Specific recommendations or required actions
- Due date of required action
- If appropriate, offer of technical assistance

The monitoring letter will be sent usually within 30 days of monitoring or earlier if possible, particularly if there are major findings. When a subrecipient is found to be out of compliance, they will have 30 days to correct deficiencies. Copies of supporting documentation demonstrating that corrective action has been taken will be required. Failure by the subrecipient to correct deficiencies may result in funds being withheld and possible restrictions on future grant. The County of Lexington shall have the same rights as the Secretary of HUD as to other remedies for noncompliance per 24 CFR 570.912 and 24 CFR 570.913.

7.9 Program Certifications

Each State or UGLG receiving a direct allocation under this notice must make the following certifications with its action plan:

- Lexington County certifies that it has in effect and is following a residential anti- displacement and relocation assistance plan in connection with any activity assisted with funding under the CDBG program.
- Lexington County certifies its compliance with restrictions on lobbying required by 24 CFR part 87, together with disclosure forms, if required by part 87.
- Lexington County certifies that the action plan for Hazard Mitigation is authorized under State and local law (as applicable) and that Lexington County, and any entity or entities designated by Lexington County, and any contractor, subrecipient, or designated public agency carrying out an activity with CDBG-MIT funds, possess(es) the legal authority to carry out the program for which it is seeking funding, in accordance with applicable HUD regulations and this notice. Lexington County certifies that activities to be undertaken with funds under this notice are consistent with its action plan.
- Lexington County certifies that it will comply with the acquisition and relocation requirements of the URA, as amended, and implementing regulations at 49 CFR part 24, except where waivers or alternative requirements are provided for in this notice.
- Lexington County certifies that it will comply with section 3 of the Housing and Urban Development Act of 1968 (12 U.S.C. 1701u) and implementing regulations at 24 CFR part 135.
- Lexington County certifies that it is following a detailed citizen participation plan that satisfies the requirements of 24 CFR 91.105 or 91.115, as applicable (except as provided for in notices providing waivers and alternative requirements for this grant). Also, each UGLG receiving assistance from a State grantee must follow a detailed citizen participation plan that satisfies the requirements of 24 CFR

570.486 (except as provided for in notices providing waivers and alternative requirements for this grant).

- g. Each State receiving a direct award under this notice certifies that it has consulted with affected UGLGs in counties designated in covered major disaster declarations in the non- entitlement, entitlement, and tribal areas of the State in determining the uses of funds, including the method of distribution of funding, or activities carried out directly by the State.
- h. Lexington County certifies that it is complying with each of the following criteria:
 - (1) Funds will be used solely for mitigation activities conducted within Lexington County pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act of 1974 (42 U.S.C. 5121 et seq.) related to findings and needs identified in the Mitigation Needs Assessment included in this Action Plan.
 - (2) With respect to activities expected to be assisted with CDBG-MIT funds, the action plan has been developed so as to give the maximum feasible priority to activities that will benefit low- and moderate-income families.
 - (3) The aggregate use of CDBG-MIT funds shall principally benefit low- and moderate- income families in a manner that ensures that at least 50 percent (or another percentage permitted by HUD in a waiver published in an applicable Federal Register notice) of the grant amount is expended for activities that benefit such persons.
 - (4) Lexington County will not attempt to recover any capital costs of public improvements assisted with CDBG-MIT grant funds, by assessing any amount against properties owned and occupied by persons of low- and moderate-income, including any fee charged or assessment made as a condition of obtaining access to such public improvements, unless:
 - (a) hazard mitigation grant funds are used to pay the proportion of such fee or assessment that relates to the capital costs of such public improvements that are financed from revenue sources other than under this title; or
 - (b) for purposes of assessing any amount against properties owned and occupied by persons of moderate income, Lexington County certifies to the Secretary that it lacks sufficient CDBG funds (in any form) to comply with the requirements of clause (a).
- i. Lexington County certifies that the grant will be conducted and administered in conformity with title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d) and the Fair Housing Act (42 U.S.C. 3601-3619) and implementing regulations, and that it will affirmatively further fair housing.
- j. Lexington County certifies that it has adopted and is enforcing the following policies, and, in addition, States receiving a direct award must certify that they will require UGLGs that receive grant funds to certify that they have adopted and are enforcing:
 - (1) A policy prohibiting the use of excessive force by law enforcement agencies within its jurisdiction against any individuals engaged in nonviolent civil rights demonstrations; and
 - (2) A policy of enforcing applicable State and local laws against physically barring entrance to or exit from a facility or location that is the subject of such nonviolent civil rights demonstrations within its jurisdiction.

- k. Each State or UGLG receiving a direct award under this notice certifies that it (and any subrecipient or administering entity) currently has or will develop and maintain the capacity to carry out disaster recovery activities in a timely manner and that Lexington County has reviewed the requirements of this notice and requirements of Pub. L. 115-123 applicable to funds allocated by this notice, and certifies to the accuracy of Risk Analysis Documentation submitted to demonstrate that it has in place proficient financial controls and procurement processes; that it has adequate procedures to prevent any duplication of benefits as defined by section 312 of the Stafford Act, to ensure timely expenditure of funds; that it has to maintain a comprehensive disaster recovery website to ensure timely communication of application status to applicants for disaster recovery assistance, and that its implementation plan accurately describes its current capacity and how it will address any capacity gaps.
- l. The grantee certifies that it considered the following resources in the preparation of its action plan, as appropriate: FEMA Local Mitigation Planning Handbook: [https:// www.fema.gov/media-librarydata/ 20130726-1910-25045-9160/fema_local_ mitigation_handbook.pdf](https://www.fema.gov/media-librarydata/20130726-1910-25045-9160/fema_local_mitigation_handbook.pdf); DHS Office of Infrastructure Protection: [https:// www.dhs.gov/sites/default/files/ publications/ip-fact-sheet508.pdf](https://www.dhs.gov/sites/default/files/publications/ip-fact-sheet508.pdf); National Association of Counties, Improving Lifelines (2014): [https:// www.naco.org/sites/default/files/ documents/NACo_ResilientCounties_ Lifelines_Nov2014.pdf](https://www.naco.org/sites/default/files/documents/NACo_ResilientCounties_Lifelines_Nov2014.pdf); the National Interagency Coordination Center (NICC) for coordinating the mobilization of resources for wildland fire: [https:// www.nifc.gov/nicc/](https://www.nifc.gov/nicc/)); the U.S. Forest Service's resources around wildland fire ([https://www.fs.fed.us/managing-land/ fire](https://www.fs.fed.us/managing-land/fire/)); and HUD's CPD Mapping tool: <https://egis.hud.gov/cpdmaps/>.
- m. Lexington County certifies that it will not use CDBG-MIT funds for any activity in an area identified as flood prone for land use or hazard mitigation planning purposes by the State, local, or tribal government or delineated as a Special Flood Hazard Area in FEMA's most current flood advisory maps, unless it also ensures that the action is designed or modified to minimize harm to or within the floodplain, in accordance with Executive Order 11988 and 24 CFR part 55. The relevant data source for this provision is the State, local, and tribal government land use regulations and hazard mitigation plans and the latest-issued FEMA data or guidance, which includes advisory data (such as Advisory Base Flood Elevations) or preliminary and final Flood Insurance Rate Maps.
- n. Lexington County certifies that its activities concerning lead-based paint will comply with the requirements of 24 CFR part 35, subparts A, B, J, K, and R.

- o. Lexington County certifies that it will comply with environmental requirements at 24 CFR Part 58.
- p. Lexington County certifies that it will comply with applicable laws.

Attachment 1 – Public Comments and Responses

Question/Comment #1

The following questions were submitted via email between June 30, 2020 and July 20, 2020:

Initial resident question -

I am seeking additional information about the CDBG-MIT Draft Action Plan. Specifically, Section "3.3 Housing Programs" indicates that the proposed plans includes the purchase of twenty-six properties that shall be owned and maintained into perpetuity by Lexington County.

I am asking for the addresses and TMS numbers identifying these twenty-six properties for which the County proposes spending \$5,980,000.

Please advise when time permits.

County Response #1

I appreciate you taking the time to inquire about the CDBG-MIT program, specifically The Draft Action Plan; section 3.3. Please be advised that all questions are part of the process of drafting the Action Plan and will be included in the Plan with answers. If you require more immediate answers, please feel free to contact me directly. I can be reached at 803-785-8121.

Resident Follow-up #1

Thank you for your response to my email.

I'm not sure what you mean when you say that "all questions are part of the process of drafting the Action Plan and will be included in the Plan with answers."

The proposed plan includes a provision that indicates the County proposes to utilize a large sum of the plan funds to purchase 26 properties. The question I have is, which properties are these?

Are you saying that the properties have not yet been identified?

Or are you saying the County is not going to answer questions, except for publishing answers to questions in the final version of the Plan?

I would think that, in order to have meaningful input on that plan, citizens would need to be able to get questions about the plan answered prior to the plan being finalized.

If you would, please shoot me back a list of the 26 properties the County proposes to purchase as a part of the Plan.

Many thanks,

County Response #2

In response to your request, please keep in mind that the Mitigation Program is a Housing and Urban Development (HUD) program. Please note that I have included information below regarding our Citizen Participation Plan, as you will see it addresses the ability for citizens to ask questions and address any concerns they may have regarding the Proposed Mitigation Program. We have had our two Public Hearings that were advertised in the Chronicle newspaper and on our website. There are specific requirements that Lexington County must follow regarding each step of the process. There is a requirement that any questions, comments, concerns regarding the Draft Action Plan are included in the Action Plan for HUD. At this point of our program we have not received

formal approval from HUD on the projects we are proposing. Once the information is available I can better answer your questions.

Public Hearings (CDBG-MIT)

Per 84 FR 45838 the County is required to “hold at least two public hearings in the HUD-identified MID (Most Impacted and Distressed) areas in order to obtain citizens’ views and to respond to proposals and questions. At least one of these public hearings is to occur prior to a grantee’s publication for public comment of its action plan on its website, and all hearings are to be convened at different locations within the MID area in locations that ensure geographic balance and maximum accessibility.” These public hearings will be conducted to inform the public of the funding and its potential uses, obtain citizens views and respond to proposals and questions from the public.

Public hearings will be held at times and locations convenient to potential or actual beneficiaries, and with accommodation for persons with disabilities. The hearings will generally be held at the Lexington County Administration Building. Also, throughout the comment period surveys and comment cards will be left at various public facilities within Lexington County for community input. Accommodations for persons with visual, hearing or other impairments will be made upon request and reasonable notice. If a significant number of non-English speaking persons can be reasonably expected to attend the hearing, the County will make translation services available. At a minimum, hearing will be conducted during normal business hours. When practical, hearing may be conducted after normal business hours.

Notice of the public hearings will be published in The Chronicle, in the Lexington County’s Administration Building (a public facility) and on the County’s website at least 7 days before the scheduled hearing date. Notice will include the date, time, location, and purpose of the hearing, and the name and phone number of the County contact person for questions and clarification.

Virtual Hearings

Due to dangers posed by the COVID-19 pandemic, HUD has permitted virtual public hearings to be conducted in order to preserve the social distancing efforts engaged in as part of the COVID-19 response. HUD Community Planning and Development (CPD) has interpreted “public hearings” in the context of CDBG-MIT Federal Register notice to include virtual public hearings. The hearing will be conducted to meet the following HUD requirements:

- The hearing will allow for questions to be asked by attendees in “real time” while allowing for answers to those questions to come directly from elected representatives to ALL attendees.*
- The County will “take appropriate steps to ensure effective communication with persons with disabilities consistent with the requirements of accessibility laws, such as Section 504 of the Rehabilitation Act and the Americans with Disabilities Act.” This includes providing auxiliary aides and services to persons with hearing and vision impairments to afford them the ability to access and participate in the hearing.*
- The hearing will be provided through a website or digital platform that is accessible to the public where digital notification and emails are accessible.*

- *The County will take reasonable steps to provide meaningful access to persons with limited English proficiency consistent with Title VI of the Civil Rights Act and Lau v. Nichols, 414 US 563 (1974) as defined in the County's Language Access Plan.*
- *Minutes from virtual hearings will be made available to the public through a digital medium that is accessible and available to the public. At a minimum a copy of the minutes will be posted on the County's website.*

I understand your point regarding questions prior to the finalization of the Action Plan. That is why the County had two Public Hearings (6/10 & 7/2), required by HUD, to inform the public regarding the draft Action Plan, as well as to field questions. The County's CDBG-MIT Draft Action Plan is now posted for public comment. The public can submit comments to the County by email, mail, or phone. The deadline for public comments is July 27th, 2020 by 5pm EST.

*The CDBG-MIT program is a fully funded federal program, with no county funds used for the projects. The potential properties that the County may purchase (through federal funds), are in the Irmo area that was impacted by the 2015 flood. The four areas are: Challedon, Whitehall, Pineglen, and Coldstream. The County has no agreement, or contract, to purchase any properties under the CDBG-MIT program to date, **therefore** we are not able to release property addresses.*

We appreciate your interest in the HUD CDBG-MIT program.

Resident Follow-up #2

Thank you for your timely response to my follow up.

Is it the County's position that they would have provided this information had this question been posed at one of the public hearings you mention?

Is it the County's position that it is not obligated to identify the proposed properties to purchase until after there is a contract or agreement to purchase?

I would not expect that there would be any such agreement until the use of the funds is approved by HUD. Preventing the release of the information on this basis frustrates the essential role that citizen feedback and inquiry has in this process.

If you believe it would be more fruitful for me to reach out to HUD directly regarding this information, County Council, or to submit FOIA requests to the County, please advise to do so.

I fail to understand why an 84-page proposed plan detailing how to spend 15 million dollars would not set forth in 26 lines the details of how it proposes to utilize more than 39% of these funds.

County Response #3

In answer to your questions regarding our DRAFT MIT Action Plan, Lexington County is proposing to HUD:

- *Currently we have no approved properties for the MIT Grant Program*
- *We are requesting 26 Potential Buyout Properties to be demolished and made for greenspace – This is a proposed project to HUD which is part of their budgetary procedure for allocating how we spend the federal allocated funds*
- *As we receive approvals they will be posted on our website and updated as changes in the MIT Action Plan*

Again, the county will provide all current project information on the CDBG-MIT website as part of the County's commitment to privacy and transparency as it becomes available.

The County of Lexington values the feedback from every citizen of our County. In order to follow HUD guidelines, the County had the two public hearings I mentioned previously. In those meetings was a Q&A period. If the question would have been proposed during the hearing, it would have had the same answer; that the County is allocating a budget to purchase 26 properties for a HUD funded buyout program. This is currently only a budgetary estimate required for the CDBG-MIT Action Plan.

Resident Follow-up #3

Is the County refusing to identify the proposed properties until the draft plan is approved?

I understand that this is a proposed plan. Accordingly, and as a part of the process, the community is supposed to be able to have input on the proposed plan and its proposed expenditure of the plan funds. If the County refuses to identify proposed properties that will be purchased with plan funds, it is not possible for the community to have meaningful input on the plan. Refusing to identify key information about the plan until after it is approved renders moot any opportunity the public might have to offer input as to the proposed plan.

You stated in your previous email the following: "Again, the county will provide all current project information on the CDBG-MIT website as part of the County's commitment to privacy and transparency as it becomes available". Presently, the County has a list of 26 properties that it is proposing to purchase as a part of this plan, yet, according to you, the County is refusing to release this information. Thus far, it seems that the County is not releasing "all" information as it becomes available, as the County has a list of properties that you iterate it is not willing to release.

Why is the County refusing to release a list of the 26 proposed properties?

How can the public have any meaningful input in the expenditure of almost 40% of the plan funds without knowing which properties the County proposes to purchase?

Is the County required to keep this information from the public until after the plan is approved?

Who has this information? Should I reach out to HUD directly for this information?

Please advise when time permits.

County Response #4

Let me apologize if I have not been clear with my answers. In regards to your questions:

This stage of the process is primarily budgetary. The County has only proposed a budgeted amount that would equal 26 properties, as well as for infrastructure projects. I understand that you want the addresses for these properties, but the County has no list of properties to give you at this time. I can tell you the County does intend to continue the buyout program in the four current areas around Irmo: Chilledon, Whitehall, Pineglen, and Coldstream respectively.

For future information, please see our CDBG-MIT website that will keep everyone up to date with the latest information regarding this program.

[Question/Comment #2](#)

The following question was submitted via email on July 1, 2020:

Since I have just received notification (late Tuesday the 30th) regarding this, and have time to read it now on July 1, and you are accepting comments only until July 2 – I feel it is necessary to email you my one comment pertaining to this Draft Plan.

1. Under the current draft there is a line item for Administration at 5% of cost – and then another line item for Planning at .1% - I believe that it would be a better service to the community to scale back the Administrative & Planning cost – (combining the two line items into one) and reducing that cost down to below 4%. This extra 1+% could be held in reserve to better supplement the housing buyouts (for fair market value prior to flooding) and for cost associated with relocation. Taking care of the citizens should be our priority and the administration/planning is already paid for in salary by the county. Outside sourcing should be kept at a minimum to ensure that the administrative cost are kept to a minimum.

County Response

Thank you very much for sending your comment regarding the CDBG-MIT administration & planning costs. We are having a virtual public hearing tomorrow at 3pm. You should be able to attend by clicking the following address that will give you the call in number and the PowerPoint presentation. Much of the program information will be presented with a question/answer period at the end of the presentation. I hope to hear from you as your comment is important to us as we move forward with this program.

Question/Comment #3

The following question was submitted via email on July 14, 2020:

To Whom it May Concern. As a Lexington County homeowner and taxpaying resident my main concerns revolve around the most effective use of scarce CDBG-MIT funds. All Lexington County residents and all US Tax Payers should know that CDBG-MIT funds are utilized in the most appropriate way for the highest net benefit to residents in the reduction of future hazard losses. Several homeowners that I know (including myself), with homes on Kinley Creek situated in the flood zone are interested in the proposed CDBG-MIT Disaster Mitigation Buyout Program. The county should expand this program over all others to support active retreat from flood zones. Because flooding causes much damage in Lexington County, and those in the Kinley Creek watershed are highly impacted by flooding such programs will save more lives and protect more property from future flooding. While drainage projects (Public Infrastructure Mitigation Program) in rural areas and associated paving of roads will produce some net benefits, I would like to see how these net benefits compare to similar benefits associated with addressing Kinley Creek watershed flooding by continuing and expanding the home buyout program. Interms of net benefits, which program, Mitigation Buyouts or Public Infrastructure Mitigation Program produces higher cost/benefits to Lexington County residents in terms of mitigating future flood losses? Removing at risk homes from flood zones provides immediate positive benefits when accounting for benefit cost ratios. How do these compare to other proposed projects? As an example, if my home were to be removed from the floodplain and the lot turned into an impoundment (as suggested by the Kinley Creek Flood Study performed by the USACE under direction by the county) the next benefit would be a significant reduction in flooding along the creek. Conversely, flood control and paving projects in rural portions of the county might not produce this same benefit. I am looking forward to participating in this CDBG-MIT process in any way that the County sees

fit and look forward to hearing back from you on these comments to the Draft Action Plan posted on your website here:

<https://lex-co.sc.gov/departments/community-development/grant-programs/cdbg-mitigation>.

County Response

Thank you for your recent email regarding our Mitigation Program. I want to take time to explain exactly what the expectations were and are for Disaster Recovery and our Mitigation Grants.

Disaster Recovery (result of the 2015 Flood Event)

In response to presidentially declared disasters, Congress appropriated additional funding for the Community Development Block Grant (CDBG) Program as Disaster Recovery grants to rebuild the affected areas and provide crucial seed money to start the recovery process. Since CDBG Disaster Recovery (CDBG-DR) assistance may fund a broad range of recovery activities, HUD can help communities and neighborhoods that otherwise might not recover due to limited resources.

- The Disaster Relief Appropriations Act of 2016 (Pub.L.114-113, approved December 18, 2015) was enacted to appropriate federal funds for disaster relief. The law provides that grants shall be awarded directly to a State or unit of general local government (UGLG) at the discretion of the Secretary. ·*
- To comply with statutory direction that funds be used for disaster- related expenses in the most affected and distressed areas, funds are allocated using the best available data that cover all of the eligible affected areas. ·*
- The funds are to be used to satisfy portions of unmet need that still remain after assistance from other federal, state and local assistance, insurance, non- profit, community or religious based organizations and/or other private or public funding has been allocated.*

The Act allocated \$16,322,000 for disaster recovery efforts in Lexington County. All funds must have been used for eligible disaster-related activities, 50% of all CDBG-DR funding must benefit low-to-moderate income households.

Lexington County followed the Housing and Urban Development regulations Expenditures of all CDBG and CDBG-DR funds must meet one of three national objectives: 1) benefit to low-to-moderate income households, 2) elimination or prevention of slums and blight, and 3) urgent need. As required by HUD, an action plan was submitted to outline Lexington County's assessment of unmet needs in the areas of housing, infrastructure, and economic development. The plan also outlines the county's allocations for addressing all outstanding recovery needs, proposed use of funds, eligibility criteria, and other aspects of the County's long- term recovery. The Disaster Recovery action plan is available on our website.

Mitigation

The additional grant (CDBG-MIT) was announced via Federal Register (August 2019) for mitigation of future disaster events. The CDBG-MIT Notice defines mitigation as "activities that increase resilience to disasters and reduce or eliminate the long-term risk of loss of life, injury, damage to and loss of property, and suffering and hardship, by lessening the impact of future disasters." The Mitigation grant is to benefit the Low to Moderate Income (LMI) areas within Lexington County. The County has determined the best approach for this grant is to assist those in Low to Moderate Income (LMI) areas to be able to evacuate to shelters, or for first responders to reach those in need during times of disaster. The County of Lexington has

recommended that 41% of the CDBG-MIT funds be allocated to property buyouts. A BCA is not required by HUD for the programs the County intends to implement. We appreciate your input regarding the HUD CDBG-MIT program. We will add to our website as additional information becomes available. Your comments and concerns are important and will be included as part of the Action Plan as the County moves forward in the grant process

[Question/Comment #4](#)

The following four questions were submitted via email on June 10, 2020:

1. Before allowing awarding any grants, are environmental impact studies done?

County Response

HUD CDBG-MIT grants require environmental assessments are done. Specific on what type of environmental assessments can be found on the HUD CDBG-MIT website.

2. Does this grant allow for developers to clear land and build multi-family units with the idea it will make it better if another weather-related event takes place?

County Response

This is a hypothetical project that could technically be funded by CDBG-MIT. However, it would be analyzed against the hazard mitigation needs of the grantee before approving the project.

3. Are traffic studies conducted prior to changes being made?

County Response

Due to the nature of the projects, no traffic studies will be conducted prior to CDBG-MIT infrastructure implementation.

4. Is this grant solely to repair past damages or one that will be used to increase development?

County Response

The CDBG-MIT grant must be used for mitigation activities. The definition states that the activities under the CDBG-MIT grant need to increase resilience to (future) disasters.
